2U Rack Mount Uninterruptible Power Supply

990-1352A 11/2003

Download from Www.Somanuals.com. All Manuals Search And Download.

Introduction

The APC Uninterruptible Power Supply (UPS) is designed to prevent blackouts, brownouts, sags, and surges from reaching your equipment. The uninterruptible power supply (UPS) filters small utility line fluctuations and isolates your equipment from large disturbances by internally disconnecting from the utility line. The UPS provides continuous power from its internal battery until the utility line returns to safe levels or the battery is fully discharged.

1: INSTALLATION

Unpack

Read the Safety Guide before installing the UPS. The User Manual and Safety Guide are accessible on the supplied User Manuals CD and on the APC web site, <u>www.apc.com</u>.

Inspect the UPS upon receipt. Notify the carrier and dealer if there is damage.

The packaging is recyclable; save it for reuse or dispose of it properly.

Check the package contents:

- □ UPS
- □ Front bezel
- Rail kit
- □ UPS literature kit containing:
 - □ Smart-UPS[®] User Manuals CD
 - □ *120/208/230 V Models Only:* PowerChute[®] CD, Serial and USB communication cables
 - □ Product documentation, safety and warranty information
 - □ Rack mounting brackets
 - EPO Connector
 - □ Hardware
- □ 230 V Models Only:
 - Input power cord
 - □ Alternate input power cord UK customers
- □ Utility connector plug
- □ IEC Jumper cords

Rail Installation

Install the rails following the instructions in the rail kit.

Placement of the UPS

The UPS is heavy. Select a location sturdy enough to handle the weight.

Do not operate the UPS in excessive dust or in temperature and humidity outside the specified limits.

PLACEMENT

Mount the UPS in a Rack

Your UPS model may vary from the examples depicted in this manual.

setback.

• Install the UPS at or near the bottom of the rack.

• Connect the battery module.

• Install brackets as shown, or at a 5 in (12.7 cm) • Remove the battery module to lighten the UPS during installation. Note: The module is heavy.

④ Reinstall the battery module.

• Attach the front bezel.

Connect Equipment and Power to the UPS

Startup

- 1. Connect equipment to the UPS. A laser printer draws significantly more power than other types of equipment and may overload the UPS.
- 2. Add optional accessories to the Smart-Slot.
- 3. Plug the UPS into a two-pole, three-wire, grounded receptacle only. Avoid using extension cords.

230 V model: The power cord is supplied in the UPS cable kit. The TVSS ground, located on the rear panel of the UPS must be connected prior to connecting the utility power.

- 4. *120 V model*: Check the *site wiring fault* LED O located on the rear panel. It will be illuminated if the UPS is plugged into an improperly wired utility power outlet, (see *Troubleshooting*).
- 5. Turn on all connected equipment. To use the UPS as a master *on/off* switch, be sure all connected equipment is on.
- 6. Press the $\underbrace{\mathsf{Test}}_{\mathsf{Test}}$ button on the front panel to power the UPS.
 - The battery charges to 90% capacity during the first four hours of normal operation. *Do not* expect full battery run capability during this initial charge period.
- 7. For optimal computer system security, install PowerChute Smart-UPS monitoring software.

Rear Panels

100/120 V

Basic Connectors

Serial	USB	TVSS
Port	Port	Screw
© ()©	\bigcirc	X

Use only interface kits approved by APC.

Use only the supplied cable to connect to the Serial Port. A standard serial interface cable is incompatible with the UPS. **Serial and USB Ports cannot be used simultaneously.**

The UPS features a transient voltage surge-suppression (TVSS) screw for connecting the ground lead on surge suppression devices such as telephone and network line protectors. Prior to connecting grounding cable, disconnect the UPS from utility power.

Emergency Power Off

The Emergency Power Off (EPO) feature is user configurable. EPO provides immediate deenergizing of connected equipment from a remote location, without switching to battery operation.

- 1. Use the EPO connector supplied with the UPS.
- 2. Use a normally-open contact to connect the +24 terminal to the IN terminal, (see diagram).
- 3. Wire the four-pin connector to the EPO system.

The EPO interface is a Safety Extra Low Voltage (SELV) circuit. Connect it only to other SELV circuits. The EPO interface monitors circuits that have no determined voltage potential. Such closure circuits may be provided by a switch or relay properly isolated from the utility. To avoid damage to the UPS, do not connect the EPO interface to any circuit other than a closure type circuit.

Use one of the following cable types to connect the UPS to the EPO switch:

- CL2: Class 2 cable for general use
- CL2P: Plenum cable for use in ducts, plenums, and other spaces used for environmental air.
- CL2R: Riser cable for use in a vertical run in a floor to floor shaft.
- CLEX: Limited use cable for use in dwellings and for use in raceways.
- For installation in Canada: Use only CSA certified, type ELC (extra-low voltage control cable).

2: OPERATION

Front Display Panel

INDICATOR	DESCRIPTION		
Online Ay	The UPS is supplying utility power to the connected equipment (see <i>Troubleshoo ing</i>).		
AVR Trim	The UPS is compensating for a high utility voltage.		
AVR Boost	The UPS is compensating for a low utility voltage.		
On Battery	The UPS is supplying battery power to the connected equipment.		
Overload	The connected loads are drawing more than the UPS power rating, (see <i>Trouble-shooting</i>).		
Replace Battery/ Battery Discon- nected	The battery is disconnected or must be replaced, (see <i>Troubleshooting</i>).		
FEATURE	FUNCTION		
Power On	Press this button to turn on the UPS, (read on for additional capabilities).		
Power Off	Press this button to turn off the UPS.		

FEATURE		Function
Self-Test		Automatic: The UPS performs a self-test automatically when turned on, and every two weeks thereafter, (by default). During the self-test, the UPS briefly operates the connected equipment on battery. Manual: Press and hold the Herest button for a few seconds to initiate the self-test.
Cold Start 208/120/230 V models Only		When there is no utility power and the UPS is off, the cold start feature will switch the UPS and connected equipment onto battery power, (see <i>Troubleshooting</i>).
Diagnosti Voltage 120V 0133 0123 0115 0105 098 Battery Charge	208V 0246 0228 0208 0190 0171 Battery Charge	The UPS has a diagnostic feature that displays the utility voltage. The UPS starts a self-test as part of this procedure. The self-test does not af- fect the voltage display. Press and hold the voltage button to view the utility voltage bar graph display. After a few seconds, this five-LED battery charge display on the right of the front panel will show the utility input voltage. Refer to the figure at left for the voltage reading, (values are not listed on the UPS).
100V 081 091 0100 0109 0119 0119	230V 0266 0248 0229 0210 0191 0191	The display indicates the voltage is between the displayed value on the list and the next higher value, (see <i>Troubleshooting</i>).

Battery Operation

The UPS switches to battery operation automatically if the utility power fails. While running on battery, an alarm beeps four times every 30 seconds.

Press the button to silence this alarm. If the utility power does not return, the UPS continues to supply power to the connected equipment until the battery is fully discharged.

If PowerChute is not being used, files must be manually saved and the computer must be turned off before the UPS fully discharges the battery.

The UPS battery life differs based on usage and environment. Refer to <u>www.apc.com</u> for on battery runtimes.

3: USER CONFIGURABLE ITEMS

NOTE: SETTINGS ARE ADJUSTED THROUGH POWERCHUTE SOFTWARE OR OPTIONAL SMART SLOT ACCESSORY CARDS.			
FUNCTION	FACTORY DEFAULT	USER SELECTABLE CHOICES	DESCRIPTION
Automatic Self- Test	Every 14 days (336 hours)	Every 7 days (168 hours), On Startup Only, No Self-Test	Set the interval at which the UPS will execute a self-test.
UPS ID	UPS_IDEN	Up to eight charac- ters (alphanumeric)	Uniquely identify the UPS, (i.e. server name or location) for network man- agement purposes.
Date of Last Bat- tery Replacement	Manufacture Date	mm/dd/yy	Reset this date when you replace the battery module.
Minimum Capacity Before Return from Shutdown	0 percent	0, 15, 30, 45, 50, 60, 75, 90 percent	Following a low-battery shutdown, the battery modules will be charged to the specified percentage before powering connected equipment.
Voltage Sensitivity The UPS detects and reacts to line voltage distortions	荣 _{High}	Brightly illu- minated - <i>high</i> sensi- tivity.	Adjust by pressing the <i>voltage sensi-</i> <i>tivity</i> button \bigcirc (rear panel). Use a pointed object, (such as a pen) to do so.
by transferring to battery operation to protect connected equipment.		 Dimly illuminated - medium sensitivity. No illumination; low sensitivity. 	Note: In situations of poor power qual- ity, the UPS may frequently transfer to battery operation. If the connected equipment can operate normally under such conditions, reduce the sensitivity setting to conserve battery capacity and service life.
Alarm Delay Con- trol	Enable	Enable, Mute, Dis- able	Mute ongoing alarms or disable all alarms permanently.
Shutdown Delay	90 seconds	0, 90, 180, 270, 360, 450, 540, 630 sec- onds	Set the interval between the time when the UPS receives a shutdown com- mand and the actual shutdown.

NOTE: SETTINGS ARE ADJUSTED THROUGH POWERCHUTE SOFTWARE OR OPTIONAL SMART SLOT ACCESSORY CARDS.				
FUNCTION	FACTORY DEFAULT	USER SELECTABLE CHOICES	DESCRIPTION	
Low Battery Warn- ing	2 minutes PowerChute soft- ware provides automatic, unat- tended shutdown when approxi- mately 2 minutes of battery oper- ated runtime re- mains.	 Brightly illuminated - low battery warning level of about 2 minutes. Dimly illuminated - low battery warning level of about 5 minutes. No illumination; low battery warning level is approximately 8 minutes. 	The UPS will beep when 2 minutes of battery runtime remains. Change the warning interval setting by pressing the voltage sensitivity button, while pressing and holding the test button. Change the low battery warning interval setting to the time that the operating system or system software requires to safely shut down.	
Synchronized Turn-on Delay	0 seconds	0, 60, 120, 180, 240, 300, 360, 420 sec- onds	Specify the time the UPS will wait after the return of utility power before turn-on, (to avoid branch circuit over- load).	
High Transfer Point	100 V model: 108 Vac 120 V model: 127 Vac 208 V model: 225 Vac 230 V model: 253 Vac	100 V model: 108, 110, 112, 114 Vac 120 V model: 127, 130, 133, 136 Vac 208 V model: 225, 229, 233, 237 Vac 230 V model: 253, 257, 261, 265 Vac	Set the high transfer point higher to avoid unnecessary battery usage when the utility voltage is usually high and the connected equipment is specified to operate with input voltages this high.	
Low Transfer Point	100 V model: 92 Vac 120 V model: 106 Vac 208 V model: 182 Vac 230 V model: 208 Vac	100V model: 92, 90, 88, 86 Vac 120 V model: 97, 100, 103, 106 Vac 208 V model: 170, 174, 178, 182 Vac 230 V model: 196, 200, 204, 208 Vac	Set the low transfer point lower when the utility voltage is usually low and the connected equipment is specified to operate with input voltages this low.	
Output Voltage 230 V Model Only	230 Vac	220, 230, 240 Vac	Select the output voltage.	

4: STORAGE, MAINTENANCE, TRANSPORTING, AND SERVICE

Storage

Store the UPS covered in a cool, dry location, with the batteries fully charged.

At -15 to +30 °C (+5 to +86 °F), charge the UPS battery every six months. At +30 to +45 °C (+86 to +113 °F), charge the UPS battery every three months.

Replacing the Battery Module

The UPS battery life differs based on usage and environment.

This UPS has an easy to replace, hot-swappable battery module. Replacement is a safe procedure, isolated from electrical hazards. You may leave the UPS and connected equipment on during the replacement procedure. See your dealer or contact APC at <u>www.apc.com</u> for information on replacement battery modules.

Refer to Mount the UPS in a Rack for instructions on battery removal and replacement.

Be sure to deliver the spent battery to a recycling facility or ship it to APC in the replacement battery packing material.

Once the battery(s) are disconnected, the connected equipment is not protected from power outages. **Be careful during battery replacement-the battery modules are heavy.**

Transporting

- 1. Shut down and disconnect any equipment attached to the UPS.
- 2. Shut down the UPS, and disconnect the UPS from the utility power outlet.
- 3. Remove the front bezel, and unplug the battery connector.

For shipping instructions and to obtain appropriate packing materials, refer to <u>www.apc.com/support/contact</u>.

Service

If the UPS requires service do not return it to the dealer. Follow these steps:

- 1. Review the problems discussed in *Troubleshooting* to eliminate common problems.
- 2. If the problem persists, contact APC Customer Service through the APC web site, <u>www.apc.com/support</u>.
 - Note the model number of the UPS, the serial number, and the date purchased. If you call APC Customer Service, a technician will ask you to describe the problem and attempt to solve it over the phone. If this is not possible, the technician will issue a Returned Material Authorization Number (RMA#).
 - If the UPS is under warranty, repairs are free.
 - Procedures for servicing or returning products may vary internationally. Refer to the APC web site for country specific instructions.
- 3. Pack the UPS in its original packaging. If this is not available, refer to <u>www.apc.com/support</u> for information about obtaining a new set.
 - Pack the UPS properly to avoid damage in transit. Never use Styrofoam beads for packaging.
 Damage sustained in transit is not covered under warranty.
 - Always DISCONNECT THE BATTERY before shipping in compliance with U.S. Department of Transportation (DOT) regulations. The battery may remain in the UPS; it does not have to be removed.
- 4. Mark the RMA# on the outside of the package.
- 5. Return the UPS by insured, prepaid carrier to the address given to you by Customer Service.

Contact Information

U.S. Customers - Refer to <u>www.apc.com/support</u>.

International Customers - Refer to <u>www.apc.com</u>, select the appropriate country from the country selection field, and select the *Support* tab at the top of the web page.

5: TROUBLESHOOTING

Use the chart below to solve minor UPS installation and operation problems. Refer to <u>www.apc.com</u> with complex UPS problems.

PROBLEM AND/OR POSSIBLE CAUSE	SOLUTION				
UPS WILL NOT TURN ON	UPS WILL NOT TURN ON				
Battery not connected prop- erly.	Check that the battery connector is fully snapped into position.				
Use button not pushed.	Press the UPS and the connected equipment.				
UPS not connected to utility power supply.	Check that the power cord is securely connected at both ends.				
Very low or no utility voltage present.	Check the utility power supply to the UPS by plugging in a table lamp. If the light is very dim, have the utility voltage checked.				
UPS WILL NOT TURN OFF					
The UPS is experiencing an internal fault.	Do not attempt to use the UPS. Unplug the UPS and have it serviced imme- diately.				
UPS BEEPS OCCASIONALLY					
Normal operating UPS beeps when running on battery.	None. The UPS is protecting the connected equipment from occasional util- ity power irregularities.				
UPS IS NOT PROVIDING EXPECTE	D BACKUP TIME				
The UPS battery is weak due to a recent outage or is near the end of the service life.	Charge the battery. Batteries require recharging after extended outages. They can wear faster when put into service often or when operated at ele- vated temperatures. If the battery is near the end of the service life, consider replacing the battery even if the <i>replace battery</i> LED is not yet illuminated.				
ALL LEDS ARE ILLUMINATED AND	THE UPS EMITS A CONSTANT BEEPING				
The UPS is experiencing an internal fault.	Do not attempt to use the UPS. Turn off the UPS and have it serviced imme- diately.				
FRONT PANEL LEDS FLASH SEQUENTIALLY					
The UPS has been shut down remotely through software or an optional accessory card.	None. The UPS will restart automatically when utility power returns.				
ALL LEDS ARE OFF AND THE UPS IS PLUGGED INTO A WALL OUTLET					
The UPS is shut down or the battery is discharged from an extended outage.	None. The UPS will return to normal operation when the power is restored and the battery has a sufficient charge.				

PROBLEM AND/OR POSSIBLE CAUSE	SOLUTION		
THE OVERLOAD LED IS ILLUMINATED AND THE UPS EMITS A SUSTAINED ALARM TONE			
The UPS is overloaded. The connected equipment exceeds	The alarm remains on until the overload is removed. Disconnect nonessen- tial equipment from the UPS.		
the "maximum load," as de- fined in <i>Specifications</i> at <u>www.apc.com</u> .	The UPS continues to supply power as long as it is online and the circuit breaker does not trip; the UPS will not provide power from batteries in the event of a utility voltage interruption.		
	If a continuous overload occurs while the UPS is on battery, the unit turns off output in order to protect the UPS from possible damage.		
THE REPLACE BATTERY/BATTER	Y DISCONNECTED LED IS ILLUMINATED		
This LED flashes and short beep is emitted every two sec- onds to indicate the battery is disconnected.Check that the battery connectors are fully engaged.			
Weak battery.	Allow the battery to recharge for 24 hours and perform a self-test. If the problem persists after recharging, replace the battery.		
Failure of a battery self-test. This LED is illuminated and the UPS emits short beeps for	Allow the battery to recharge for 24 hours and perform another self-test to confirm the <i>replace battery</i> condition. If the battery passes the self-test, the alarm will stop and the LED will clear.		
the alarm every five hours.	If the battery fails again, it must be replaced. The connected equipment is unaffected.		
THE SITE WIRING FAULT LED ON T	THE REAR PANEL IS ILLUMINATED (120 V MODEL ONLY)		
The UPS is plugged into an improperly wired utility power	Wiring faults detected include missing ground, hot-neutral polarity reversal, and overloaded neutral circuit.		
outlet.	Contact a qualified electrician to correct the building wiring.		
THE INPUT CIRCUIT BREAKER TRI	PS		
The UPS is overloaded.	Reduce the load on the UPS by unplugging equipment. Reset the breaker.		
THE AVR BOOST OR AVR TRIM LE	DS ARE ILLUMINATED		
Your system is experiencing a period of low or high voltage.	Have qualified service personnel check your facility for electrical prob- lems. If the problem continues, contact the utility company for further as- sistance.		
THERE IS NO UTILITY POWER			
There is no utility power and the UPS is off.	<i>120/208/230 V models only</i> : Use the Cold Start feature to supply power to the connected equipment from the UPS battery.		
	Press the UPS will beep briefly.		
	Press and hold the button again for about three seconds. The unit will emit two beeps. Release the button during the second beep.		

PROBLEM AND/OR POSSIBLE CAUSE	SOLUTION	
UPS OPERATES ON BATTERY ALT	THOUGH LINE VOLTAGE EXISTS	
The UPS input circuit breaker tripped.	Reduce the load on the UPS by unplugging equipment. Reset the breaker.	
Very high, low, or distorted line voltage.	Move the UPS to a different outlet on a different circuit; inexpensive fuel powered generators may distort the voltage. Test the input voltage with the utility voltage display, (see <i>Operation</i>). If acceptable to the connected equipment, reduce the UPS sensitivity.	
BATTERY CHARGE AND LOAD LEDS FLASH SIMULTANEOUSLY		
The UPS has shutdown.	Check that the room temperature is within the specified limits for operation.	
The internal temperature of the UPS has exceeded the allowable threshold for safe operation.	Check that the UPS is properly installed, allowing for adequate ventilation. Allow the UPS to cool down. Restart the UPS. If the problem continues, contact APC at <u>www.apc.com/support</u> .	
DIAGNOSTIC UTILITY VOLTAGE		
All five LEDs are illuminated.	The line voltage is extremely high and should be checked by an electrician.	
There is no LED illumination.	If the UPS is plugged into a properly functioning utility power outlet, the line voltage is extremely low.	
ONLINE LED		
There is no illumination.	The UPS is running on battery, or it must be turned on.	
The LED is blinking.	The UPS is running an internal self-test.	

Regulatory Agency Approvals and Radio Frequency Warnings

120/208 V models

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his/her own expense.

Shielded signal cables must be used with this product to ensure compliance with the Class A FCC limits.

230 V models

This is a Class A product. In a domestic environment this product may cause radio interference, in which case the user may be required to take corrective actions.

100 V MODELS

この装置は、情報処理装置等電波障害自主規制協議会(VCCI)の基準 に基づくクラスA情報技術装置です。この装置を家庭環境で使用すると電波 妨害を引き起こすことがあります。この場合には使用者が適切な対策を講ず るよう要求されることがあります。

Declaration of Conformity

2003 EC Declaration of Conformity		
We, the undersigned, declare under our sole responsibility that the equipment specified below conforms to the following standards and directives:

Limited Warranty

American Power Conversion (APC) warrants its products to be free from defects in materials and workmanship for a period of two years from the date of purchase. Its obligation under this warranty is limited to repairing or replacing, at its own sole option, any such defective products. To obtain service under warranty you must obtain a Returned Material Authorization (RMA) number from customer support. Products must be returned with transportation charges prepaid and must be accompanied by a brief description of the problem encountered and proof of date and place of purchase. This warranty does not apply to equipment that has been damaged by accident, negligence, or misapplication or has been altered or modified in any way. This warranty applies only to the original purchaser who must have properly registered the product within 10 days of purchase.

EXCEPT AS PROVIDED HEREIN, AMERICAN POWER CONVERSION MAKES NO WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Some states do not permit limitation or exclusion of implied warranties; therefore, the aforesaid limitation(s) or exclusion(s) may not apply to the purchaser.

EXCEPT AS PROVIDED ABOVE, IN NO EVENT WILL APC BE LIABLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OF THIS PRODUCT, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE. Specifically, APC is not liable for any costs, such as lost profits or revenue, loss of equipment, loss of use of equipment, loss of software, loss of data, costs of substitutes, claims by third parties, or otherwise.
