Introduction

Congratulations on your purchase of this quality Belkin product. You can now enjoy the benefits of sharing printers and peripherals, exchanging data quickly between connected computers, and communicating via e-mail and the Internet. This guide explains how to install and use the Belkin USB 10/100 Ethernet Adapter on a PC running Microsoft[®] Windows[®] 98, 2000, or Me operating system software.

Features:

- Compatible with USB and Ethernet specifications
- Provides LED indicators for monitoring network traffic

Contents of Package:

- One USB 10/100 Ethernet Adapter
- One CD-ROM
- User Guide

Installing the USB 10/100 Ethernet Adapter

- 1. Turn off the power to the desktop/laptop.
- 2. Insert the USB 10/100 Ethernet Adapter's USB Connector into the PC's USB port.
- 3. Insert a CAT5 cable into the Ethernet jack.

Basic PC-to-Ethernet Port Connections

An Ethernet port is used to connect the adapter to an Ethernet environment. Such a port might be an Ethernet hub, switch, network wall socket, peripheral device, etc.

4. Use the following connection diagrams for your specific application:

PC-to-PC Direct Connections

NOTE: A standard Belkin Network Cable cannot be used to directly connect two computers. A specially wired cable called a crossovc cable is needed to allow you to connect 2 computers without the use of a network hub or switch. Belkin crossover cables are yellow (Belkin A3X126-XX-YLW-M)

PC-to-Ethernet Network Connections

PC-to-Cable Modem or xDSL Modem Connections

Installing the network drivers

Now that you have properly installed the USB 10/100 Ethernet Adapter and it is properly connected to the network, we are now ready to configure the software to allow your computers to work together efficiently.

1. Turn on the power to the PC. Windows will automatically detect that a new device has been installed and will display the following window:

- 2. The "Add New Hardware Wizard" will begin:
- 3. Click the Next button.

Installing the Network Drivers

 When asked, "What do you want Windows to do?" select the first option- "Search for the best driver for your device.(Recommended)" and click the Next Button.

5. Select the CD-ROM drive box. Place the CD-ROM supplied with the card in your CD-ROM and click the Next Button.

6. The following screen will appear:

7. Click the Next Button and the following screen will appear:

8. Click on the Finish Button to complete the wizard. Your computer may prompt you to restart, if so, allow the system to restart.

Many DSL or cable modems require connection to a computer through a network interface card (NIC). To determine if your cable or DSL modem can be connected through a network interface card, you can either consult your modem's documentation or simply look at the ports on the back of the modem. If your modem has a port that looks just like the one pictured below (similar to a standard phone jack, but a little larger), then the Belkin USB 10/100 Ethernet Adapter is an easy way to connect to these modems and take advantage of high-speed Internet access.

10/100Base-T Ethernet Connector

Connecting the hardware

To connect the modem to your Network Card, you will need an Ethernet "patch cable," or "CAT5 cable". Most cable and DSL modems will require connection using a "crossover patch cable," however, some modems offer a second network connector labeled "Computer," which can be connected to the Network Card using a standard patch cable. To determine which cable to use, it is recommended that you consult your modem's installation guide or user manual.

Belkin offers a full line of these cables, available from any major retailer or distributor of computer-related products. To achieve the best performance from your Cable or DSL modem, we recommend the following part numbers:

Crossover Ethernet Patch Cable:

A3X126-xx-YLW-M, where "xx" denotes the cable length in feet FastCAT5e Ethernet Patch Cable:

A3L850-xx-yyy-S, where "xx" denotes the length, and "yyy" denotes the color of the cable

To connect your DSL or cable modem to the computer, make sure you have first installed both the Belkin USB 10/100 Ethernet Adapter and its drivers as detailed earlier in this manual. Once the hardware and drivers are installed, plug one end of the Ethernet Patch Cable to the connector on the USB/Ethernet Adapter, and plug the other end into the connector on the modem.

Configuring your computer

Once the computer is connected to your DSL or cable modem, you will need to configure your computer's network settings to access the Internet using the modem.

Note: This section includes general instructions for configuring your computer to use a DSL or cable modem, which work for most DSL and cable service providers; however, some providers have special requirements or non-standard configurations. If your DSL or cable provider has provided instructions which differ from this, please follow those instructions. If the procedure below does not work for you, please contact your DSL or cable provider for instructions on configuring your computer to use the modem. When you use a DSL or cable modem, you are connecting to your service provider's network. These networks can be set up by the provider to communicate with your computer using either "dynamic" or "static" addressing. To configure your computer, you will need to know which of these methods is to be used. If your provider intends for you to use "static" addressing, they should have provided you with several Internet addresses (labeled "IP address", "Net Mask", and one or more "DNS addresses"), each of which looks similar to the following: **192.168.0.1**. If you did not receive numbers such as this in the paperwork or documentation accompanying your modem, your provider likely intends to use "dynamic" addressing.

Using static addressing

To access the Internet using static addressing, configure the network settings for your computer as follows:

- Open the Control Panel: click on the Start button, click on Settings, and choose Control Panel from the menu that pops out.
- Double-click on the Network icon in control panel to open the Network window.

DK Casol
UN Carcer

- 8. Select "Enable DNS".
- 9. If your service provider has supplied a "Host Name" and/or "Domain", fill in these fields.
- 10. For each DNS address your service provider has supplied, add the address in the "DNS Server" section.
- 11.Click OK to close the TCP/IP Properties window.
- 12. Back in the Network window, scroll through the list of network components. If "File and Printer Sharing for Microsoft Networks" is on the list, we strongly recommend removing it before using a DSL or cable modem connection. Using File and Printer Sharing makes it easier for other people on the Internet to access files on your computer without your knowledge or consent, with potentially harmful results. Check with your service provider for their own specific security recommendations.
- 13.Click OK to close the Network window.
- 14. Windows will ask you to restart your computer. Please do so.

Once you have restarted your computer, do the following:

- 1. Right-click on the "Internet Explorer" icon on your desktop to bring up its context menu, and select Properties.
- 2. Select the "Connections" tab.
- Under "Dial-up settings", choose "Dial whenever a network connection is not present".

4. Click OK to close the window.

You should now be able to open Internet Explorer and access the Internet at high-speed through your DSL or cable connection. If your browser is unable to connect to the Internet, please contact your service provider for further information.

Using dynamic addressing

To access the Internet using dynamic addressing, configure the network settings for your computer as follows:

- 1. Open the Control Panel: click on the Start button, click on Settings, and choose Control Panel from the menu that pops out.
- 2. Double-click on the Network icon in control panel to open the Network window.

4. Click OK to close the window.

You should now be able to open Internet Explorer and access the Internet at highspeed through your DSL or cable connection. If your browser is unable to connect to the Internet, please contact your service provider for further information. If you have two or more computers in your home or office, connecting them via a network lets you cooperate, collaborate, and make the most of your hardware. You can share files, printers, and even access the Internet from all of your computers through your network.

While networking was once a complicated matter, Windows 95, 98 and later versions, along with hardware like Belkin networking products have made networking very easy to do for everyone. The following section of this manual will help you set up a simple network in your home or office. If you are connecting to a larger, existing network, it is recommended that you consult your network administrator (the person who originally set up the network) for instruction on how to connect additional computers to the network.

There is a wide variety of network hardware available, ranging from simple and inexpensive to very complex; however, for most home and small offfice network needs, the hardware required is basic.

Connecting two computers:

Connecting two computers simply requires each computer to have a Network Adapter, such as the Belkin 10/100 Ethernet Adapter, the Belkin Notebook Network CardBus Card for notebook computers, or the Belkin Desktop Network PCI Card for desktop computers. Simply connect the two Network Cards using a crossover Ethernet patch cable, such as Belkin part number:

A3X126-xx-YLW-M, where "xx" denotes the cable length in feet

Connecting three or more computers requires each computer to have a Network Adapter such as the Belkin 10/100 Ethernet Adapter, the Belkin Desktop Network Card for desktop computers, or the Belkin Notebook Network Card for notebook or laptop computers. You should also have a 10/100Base-T hub or switch, with enough ports for the number of computers you intend to connect immediately or in the near future. Hubs and switches are physically and effectively very similar; however, Belkin always recommends the use of switches when possible (such as the Belkin 5-port Network Switch part number F5D5130-5, or the Belkin 8-port Network Switch part number F5D5130-8). Switches offer much higher performance, efficiency, and speed than standard hubs.

After installing the network cards, connect each computer to the switch using an Ethernet CAT5 patch cable, such as Belkin part number:

A3L850-xx-yyy-S, where "xx" denotes the length, and "yyy" denotes the color of the cable

Configuring your computers

For each computer you connect to the network, you must set the network address to be used by other computers to communicate with this one. Follow these steps on each computer on the network to properly configure these settings:

- 1. Open the Control Panel: click on the Start button, click on Settings, and choose Control Panel from the menu that pops out.
- 2. Double-click on the Network icon in control panel to open the Network window.

Sharing a single Internet connection is one of the most useful advantages of networking your computers. Rather than having a modem, phone line, and perhaps even a separate Internet account for each of your computers, you can configure your network to allow all of your computers to share a single dial-up, DSL, or cable Internet connection. There are two ways to share an Internet connection, either by running Internet sharing software on a computer on the network which has a working Internet connection, or by using a special piece of hardware called a "Gateway".

Software Internet sharing is appropriate for dial-up (normal phone line) Internet connections, as well as for DSL and cable connections which use either a modem which connects to the computer's USB port, or a modem which goes inside of the computer. Software Internet sharing can be done through the Windows operating system if the computer which has the Internet connection is running Windows 98 SE, Me, NT 4.0., or 2000. If the computer with the Internet connection to be shared is running another operating system, third-party "proxy server" software is required.

Hardware Internet sharing, which requires a Gateway (such as the Belkin Broadband Internet Gateway, part number F5D5230-X), is the best way to share DSL or cable Internet connections which use a modem connected to the Network Card in a computer.

Once you have your network running properly, which can easily be verified by using Network Neighborhood to view the other computers on your network, and have a working Internet connection through a standard dial-up, DSL, or cable modem, setting up Internet connection sharing is simple.

Hardware Internet sharing

Sharing of a single broadband Internet connection using a Gateway is the most efficient and highest-performance way of sharing a DSL or cable Internet connection. In addition, most Gateways provide a basic level of security for your network, and include a built-in switch to add more ports to your network. In fact, full-featured Gateways such as the Belkin Broadband Internet Gateway (part number F5D5230-X) can be used either in place of, or in addition to, any existing network hub or switch.

For full information on installing a Gateway and configuring internet access using it, please consult the user manual supplied with your Gateway.

Software Internet sharing

If you have a working Internet connection on a computer running Windows 98 SE, Me, NT 4.0, or 2000, you can use the built-in Internet Connection Sharing capabilities of your operating system. On the computer which has the Internet connection follow these steps.

Windows 98 SE host configuration

- 1. Open the My Computer window.
- Double-click on the Control Panel and then double-click on Add/Remove Programs and press the Windows Setup tab and the following window will appear:

Itemet Tools To add a component, select the check box don't want the component. A shaded box in the component will be installed. To see who component cick: Details	mans that only part of

FCC Statement

DECLARATION OF CONFORMITY WITH FCC RULES FOR ELECTROMAGNETIC COMPATIBILITY

We, Belkin Components, of 501 West Walnut Street, Compton CA 90220, declare under our sole responsibility that the product:

F5D5050

to which this declaration relates:

Complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CE Declaration of Conformity

We, Belkin Components, declare under our sole responsibility that the F5D5050, to which this declaration relates, is in conformity with Generic Emissions Standard EN50081-1 and with Generic Immunity Standard EN50082-1 1992.

Belkin Components Limited Lifetime Product Warranty

Belkin Components warrants this product against defects in materials and workmanship for its lifetime. If a defect is discovered, Belkin will, at its option, repair or replace the product at no charge provided it is returned during the warranty period, with transportation charges prepaid, to the authorized Belkin dealer from whom you purchased the product. Proof of purchase may be required.

This warranty does not apply if the product has been damaged by accident, abuse, misuse, or misapplication; if the product has been modified without the written permission of Belkin; or if any Belkin serial number has been removed or defaced.

THE WARRANTY AND REMEDIES SET FORTH ABOVE ARE EXCLUSIVE IN LIEU OF ALL OTHERS, WHETHER ORAL OR WRITTEN, EXPRESSED OR IMPLIED. BELKIN SPECIFICALLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

No Belkin dealer, agent, or employee is authorized to make any modification, extension, or addition to this warranty.

BELKIN IS NOT RESPONSIBLE FOR SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES RESULTING FROM ANY BREACH OF WARRANTY, OR UNDER ANY OTHER LEGAL THEORY, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DOWNTIME, GOODWILL, DAMAGE TO OR REPROGRAMMING, OR REPRODUCING ANY PROGRAM OR DATA STORED IN OR USED WITH BELKIN PRODUCTS.

Some states do not allow the exclusion or limitation of incidental or consequential damages or exclusions of implied warranties, so the above limitations of exclusions may not apply to you. This warranty gives you specific legal rights, and you may also have other rights that vary from state to state.
