1. Voice Mail

1.1. Configuring your Voice Mail Box for the First Time

To configure your voice mail box press the messages button where as shown below:

You will be prompted to enter your password. Call the Help Desk for help with your password. Enter your password and follow the prompts. You will be asked to:

- Record your name.
- Set a personal greeting, if desired.
- Change your password.

1.2 Additional Voice Mail Information

1.2.1 Voice Mail Indicator

If you have a voice mail waiting, the red light on your handset will be lit and there will be a blinking envelope on the screen next to your phone number. Also, when you lift your handset, you will see 2 small red lights in the cradle which indicates you have voice mail.

1.2.2 Checking Voice Mail from Off-Campus

To check your voice mail from off-campus, you need to dial your phone number and wait for the greeting to play, then during the greeting dial "*" followed by your "ID", which is your phone number, then "#". Enter your password followed by "#". To access your mailbox, press "2".

1.2.3 Sending a Call Directly to Voice Mail

To send a call directly to voice mail before answering it, press the softkey button below **iDivert**.

1.2.4 Transferring a Call to Voice Mail

To transfer a call to voice mail, press the softkey button below **Transfer**, then press "*", and dial the five digit extension, then press the softkey button below **Transfer** or hang up.

1.2.5 Voice Mail Specifics

Maximum length of greeting	60 seconds
Maximum length of recorded message	5 minutes (300 seconds)
**Maximum number of messages	1 hour's worth of messages
**Life span of voice mail messages	60 days
Size of password	3-10 digits
Password reset	45 days

** These are subject to change in order to maintain system performance.

2. Directory Types on your Cisco Phone

There are 4 primary directory types: Missed Calls, Received Calls, Placed Calls, and Corporate Directory. Each of these can be reached by pressing the directories button • on the phone, scrolling to the applicable directory and then pressing the softkey button below **Select**.

Tip: You can press the number key corresponding to the desired menu option, rather than scrolling and then pressing **Select**.

- **Missed Calls** shows the calls that have come in that you did not answer. You can use the navigation button to scroll through the missed calls and if there is one that you want to return, you can then press the softkey button below **Dial** to dial that number.
- **Received Calls** shows the calls that you have answered. Again you can scroll through these calls and select one to be dialed again if you wish.
- **Placed Calls** shows the calls that have been made on your phone. You can scroll through these also and redial a selected call.

Tip: If you press the Navigation Button when at the phone's main screen, it will automatically scroll through the numbers on your **Placed Calls** directory.

• **Corporate Directory** is a directory of every faculty/staff member on campus that has a phone number assigned to them. This directory is a little different from the others in that when you first select it, you will see a **Directory Search** screen that allows you to enter the first part of a **First Name**, **Last Name**, or **Number**. Selecting the letters to search on works similarly to a cell phone, where you press the number key corresponding to the letter below it and if it is the second letter in the string, you need to quickly press the number key twice, three times quickly for the third letter, etc. You can then press the softkey button below **Search** to get only those people that meet that search criteria. If you did not enter any search criteria, you will see the first 64 people entered into the Corporate Directory. If your search criteria is too wide, you will also be limited to the first 64 entries. You can then scroll through the names and select the one that you wish to dial.

3. Setting Up Services (using the web interface)

Your Cisco Phone is a computer network device that can share information with other network devices. You can establish phone services and control settings and features from your computer using the Cisco CallManager User Options web pages. Once you configure features and services on the web pages, you can access them on your phone.

To log in to the User Options web pages for the first time, open Internet Explorer and browse to <u>http://vwtss50/ccmuser</u>. (This site is ONLY available from client computers located on campus.)

When you first bring up the page, you must enter a User ID and Password to log in. Your User ID should be the same as your email name, which is typically: *first initial last name (for example, jsmith for Joe Smith)*. Contact the Help Desk if you need to know the default password.

After you log in you will see the following welcome page, which gives you a menu of options available. You may never need to access some of these options however (Service URL Buttons, Locale for this phone, Locale for these web pages, Plugins).

3.1 Changing Your Password

Contact the helpdesk for the default password for your CallManager User ID. This should be changed immediately upon login! If someone else knows your password they can control settings on your phone so please change your password as soon as you get your new phone. Note: This password is not the same as the password used for voice mail.

Click on the link "Change your **Password**" on the Cisco CallManager User Options Menu as shown on page 7.

The Change Your Password page displays as shown below.

Enter the **Current Password** and then enter the **New Password** that you want to replace it with and enter it again under **Confirm Password**.

Click Update and your password is changed.

3.2 Changing Your PIN Number

You will need a PIN to set up specific phone services. Contact the Help Desk for the default PIN for your CallManager User ID. This should be changed immediately before configuring any services. If someone else knows your PIN they can control settings on your phone so please change your PIN as soon as you get your new phone. Note: Your PIN is not the same as the password for Call Manager or the password used for voice mail.

Click on the link "Change your **PIN**" on the Cisco CallManager User Options Menu as shown on page 7.

The **Change your Personal Identification Number** (PIN) page displays as shown below:

Enter the Current PIN, the New PIN and then Confirm the New PIN .

Click Update to change the PIN.

Note: If you have already added services with the old PIN number, go back to those services and enter your new PIN number so the services will work properly.

3.3 Call Forward All

You can forward all of your calls to a different number. For example, you can forward calls to your voice mail or to an internal extension such as a coworker that will be covering for you while you are away from your desk. Call forwarding can be done directly on your phone by pressing the softkey button below **CFwdALL** on your phone. **OR** From the web interface, you can click on "**Forward** all calls to a different number" on the Cisco CallManager User Options Menu as shown on page 7 to forward your calls. Check the box next to "Forward all incoming calls on line 1 (Your number) and select either Voice Mail or input the new number that you want the calls forwarded to. (Note: You may have multiple lines appearances on your phone. Be careful to select the appropriate line when forwarding calls to another number.)

Then press the Update key.

Forward Your Calls

Configure Call Forwarding on your Cisco 7961 (Dick Efnor)

Use this page to forward incoming calls on your phone to another extension. To forward a line, enter the phone number where you want your calls to go. To stop forwarding calls, clear the check box on the line that is being forwarded.

Status: Ready

E Forward all incoming calls on line 1 (77354) to Soice Mail

O this number

Update

View page in English Return to the Menu Log Off

3.4 Adding or Updating Speed Dials (using the web interface)

To add or update speed dials click on the link "Add/Update your **Speed Dials**" on the Cisco CallManager User Options Menu as shown on page 7. (Note: These could be coordinated within an office to simulate the Intercom function on the old phones.) After clicking the link you can assign speed dials from 1-99 for your phone. If you have any spare programmable buttons \bigcirc on your phone, they will get the first speed dials, e.g. if you have 1 programmable button that has not been set to a specific phone line, speed dial 1 will be on that button.

The remaining speed dials are used by entering the speed dial number on your phone, then pressing the softkey button below **AbbrDial** on your phone display.

The following screen shot shows the page for adding and updating speed dials. Just enter the complete phone number next to the **Speed Dial #**. The phone number should be entered exactly the same as if you were dialing the number yourself (for off-campus, enter 9 plus the 7 digit number, etc.). The **Display Text** field can be used to enter who or what the phone number is for. (If the speed dial is for a programmable button \bigcirc , the Display Text will show next to the button.)

Add/Update Your Speed Dials

Configure the Speed Dial Buttons for your Cisco 7961 (SEP001AA22BEC8C)

Use this page to enter the phone numbers you want associated with each of your Speed Dial buttons. When you are done, click Update.

Note: The display text for each speed dial on the phone can contain up to 30 characte

Status: Ready

3.5 Subscribe/Unsubscribe Phone Services (using the web interface)

Phone services are applications that you can access on your phone. Two default services are available: **Fast Dials** and **My Address Book**. Some clients require additional services which will be made available by individual login as needed.

3.5.1 Subscribing to the Personal Address Book Service

Click on the link **Configure your Cisco IP Phone Services** on the Cisco CallManager User Options Menu.

		50	(Unassigned)		
De	elete Seler	cted	Return to Search Add	i a New Address Book Entry	
	bage in E n to the M ff				

Click on the word (**Unassigned**) next to the Fast Dials number that you want to set and the **Add a New Fast Dial Entry** screen will again open.

Option 3:

The third way of entering a Fast Dial is to press the Services button \bigcirc on your phone; then select Fast Dials; scroll to the number that you want to set a Fast Dial for and press the softkey button below **Assign**. You can then enter a phone number that you want to assign to that Fast Dial. Note that when using this method, you can just assign a phone number to the Fast Dial and cannot tie it to the Personal Address Book.

3.8 Accessing your Phone User Guide (from the web interface)

From the main menu page on the Cisco CallManager User Options Menu as shown on page 7, select "View the User Guide for your phone". The user guide for the model phone that you have will automatically be displayed in a pdf document. Please read the document to get familiar with your phone. The document will guide you through basic set up options on your phone like how to change the ring volume, speaker volume, and ring tones. The manual is also available on the Help Desk website http://www.vw.vccs.edu/helpdesk/CiscoPhones/index.htm along with interactive tutorials.

4. Modifying your Phone Settings

The phone settings are accessed by pressing the Settings button on your phone. When you press this button, there are several options on the menu, but the only one that you want to modify is **User Preferences**.

If you highlight **User Preferences** and then press the softkey button below **Select**, there will be more options to choose from. Normally the only option that you may want to change is **Rings**, which is the first option. If you select **Rings**, it will then show a **Default Ring** and the ring associated with your line. To change the default ring, select **Default Ring**, then you will then see a number of different ring tones. You can try each one out by selecting a ring, then pressing the softkey button below **Play**. You can repeat this step as many times as you want until you find the ring that appeals to you. Once you have found the ring you want to use, select it and press the softkey button below the word **Save**. This will change the ring on your line to this selected ring. You can then press the softkey button below **Exit** three times to get out of **User Preferences**.

5. Phone Help

There is help available on your phone through the **Help** button. ⁽²⁾ The button works two ways. If you press another button on the phone after the ⁽²⁾, information will pop up on the screen specifically about the second button that you pushed. If you do not press a second button, the main help menu will be displayed after a few seconds. There are four main topics: **About Your Cisco IP Phone**, **How Do I...?**, **Calling Features**, and **Help**. You can then select links to find the topic that you want help on.

You may also contact the Help Desk for assistance at <u>helpdesk@vw.vccs.edu</u> or 7-7354.
