

Getting Your Multifunction Back On Your Network After A Router Or Network Change

PIXMA MX492

Mac OS

Information

Important

If any of the following situations exist

- You have replaced your Router or Access Point
- You want to use a different wireless network
- Router settings have been changed.

Please complete the following steps to apply the new configuration settings to your multifunction.

Preparing to Connect the Multifunction To the Network

Network Requirements

Before connecting the machine to the network, make sure that configuration of the computer and access point or router is complete, and that the computer is connected to the network.

Wireless Connection

Before connecting the machine to the network, the computer needs to be connected to the network. Make sure that configuration of the computer and access point or router is complete.

Preparing to Connect the Multifunction To the Network

Notes on Network Connection

• The configuration, router functions, setup procedures and security settings of the network device vary depending on your system environment. For details, refer to your device's instruction manual or contact its manufacturer.

• In an office setup, consult your network administrator

• If you connect to a network that is not protected with security measures, there is a risk of disclosing data such as your personal information to a third party.

• Place the machine and computer on the same network segment.

Software Installation

To use the machine by connecting it to a computer, software including the drivers needs to be copied (installed) to the computer's hard disk. Installation time varies depending on the computer environment or the number of application software to be installed.

IMPORTANT

- Log on as the administrator (or a member of the Administrators group).
- Quit all running applications before installation.
- Do not switch users during the installation process.
- Internet connection may be required during the installation. Connection fees may apply. Consult the internet service provider.
- It may be necessary to restart your computer during the installation process. Follow the on-screen instructions. The installation resumes once your computer has restarted.

• If the firewall function of your security software is turned on, a warning message may appear that Canon software is attempting to access the network. If such a warning message appears, set the security software to always allow access.

When you reinstall your printer on your network because of a router or network change, you follow the same procedure as for a first time install. A step-by-step walk through of the wireless setup is built into the installation routine of the software for your PIXMA.

To begin setup of your PIXMA MX492 on your wireless network, you must first download the software to your computer. Access the MX490 series Setup page, read the instructions, then click the **Download** button.

After the file has downloaded successfully (default location is the **Downloads** folder), double-click it to start the install procedure.

The setup instructions presented in this document describe the "**Cableless Setup**" method which does not require the need to know the SSID (network name), or network passphrase and does not require the printer to be temporarily connected to the computer with a USB cable.

Click Next on the first screen. If prompted, enter the Administrative Password to continue.

Continue to follow on-screen instructions. On the **Setup Procedure Selection** screen, if your printer's display looks like the example on the left (above Push Button Method), press the machine's **Stop** button, then click **Other Methods** on the **Setup Procedure Selection** screen (**2-1**). If the printer's display already is like the example on the right, click **Other Methods**.

Continue to follow on-screen instructions.

Select Cableless setup on the Setup Procedure Selection screen (2-2).
