. General introduction

We congratulate you on your acquisition of this digital camera. Before using it please read this instruction manual carefully in order to be able to use all its functions correctly, thus avoiding mistakes

You can use your camera to take photos or use its webcam function to conduct a face-to-face conversation with images through the internet.

We built in 4X16Mb SDRAM memory and a SD/MMC card slot, where you can insert a SD or MMC card, in this camera and use this memory to save the pictures you take with the camera. You can connect your camera to your computer with a USB cable, the computer will automatically detect a new portable device and now you can download or copy the photos saved to the memory to your computer.

II. Warning

1. Before using your camera to take photos of an important event,

- please sample some photos to check that the camera works well. 2. Do not use batteries that do not agree with the camera listed in
- 2. Do not use batteries that do not agree with the camera listed in technical specifications. Because improper battery may result in battery leakage, explosion, fire or human body hurt.

 Before loading batteries, do please check the electric polarity.

battery compartment door.

If you are not using the camera for a long time (months),remove the batteries for best results.

Insert batteries in the direction shown on the diagram on the

Before you remove the batteries, make sure that you have downloaded all of the stored pictures on the internal SDRAM

memory in the camera.

If the battery leaks in the battery compartment, clear it and reload new batteries.

3. Before replacing batteries, please transfer the photos saved to the 4X16 SDRAM memory to your computer or replacing batteries must be within 20 seconds after the camera is properly and correctly closed. Or all photos saved will lose.

Check for power supply of the camera or replace new batteries before using it in order not to lose saved photos from improper battery replacing.

Photos saved to SD/MMC card will not lose during battery Download from Www.Somanuals.com³. All Manuals Search And Download.

replacing.

 Using your camera when there is body static-electricity may power off your camera, only restart it and the camera works again.

III. Accessory

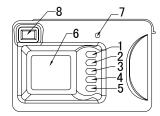

- •digital camera •manual •software CD •USB cable
- •3 AAA alkaline batteries

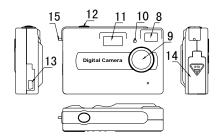

IV. PC compatibility

- 1. CPU: 486/66MHz or above
- 2. memory: 64MB or above
- 3. monitor: 800X600 or above, 24bit or above
- 4. Windows 98SE/Windows Me/Windows 2000/Windows XP
- 5. USB port and USB cable, CD driver

V.Getting to know your digital camera

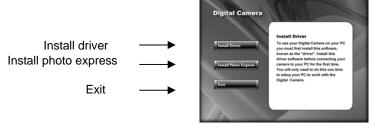

- 1. Menu/on/off
- 2. UP
- 3. Down/Flashlight on/off
- 4. Screen on/off
- 5. Preview/ submenu
- 6. Screen switch
- 7. Charge light
- 8. Viewfinder
- 9. Lens
- 10. Working-on light
- 11. Flash-strobe light
- Shutter button
- 13. USB port
- 14. Battery compartment
- 15. strap holder

VI. Installation and utilization of software

Load software CD, the following installation interface will automatically appear:

Installation of Photo Express

Click on <Install Photo Express>, and then follow the step-by-step instructions to complete the installation.

Installation of driver

Click on <Install Driver> and follow the step-by-step instructions to complete the installation.

After successful installation of driver, restart your computer.

VII. Using your digital camera

Power On:

Press and hold <Menu/on/off> button 1 second to power on your camera.

Power Off:

The camera shuts down automatically after 60 seconds of inactivity. Or by pressing <Menu/on/off> for 3 seconds, a distinct beep can be heard, the camera goes off.

All other operations can be fulfilled after the camera is turned on.

Taking photos

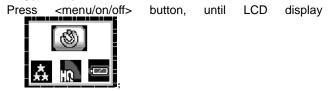

1. Taking still pictures

By pressing <shutter>, two distinct beeps can be heard, the photo has been taken. Automatically the number displayed on the screen is increased by one. For example, if the screen displays 000 when the camera is powered on, after one photo has been captured, 001 will appear. If the memory is full, FUL will appear on screen.

When taking photos, keep the camera stable.

Insufficient light will result in bad photo quality or failure of capture.

2. Self-Timer

Then press <shutter> immediately, self-timer starts and after 10 seconds, a photo has bee automatically taken.

3. Take moving video

Press <menu/on/off>button, until LCD display

Then press <shutter> immediately, the camera starts up to take AVI program. An AVI icon flashes at the screen left

bottom. Press <shutter> again or when the memory is full, the camera will stop taking.

You can take an AVI program about 1 minute one time, so if you want to take more, re-take again.

The shuttering time relies on the memory medium and the shuttering environment.

4. Take 3 photos continuously

Press<menu/on/off>button, until LCD display

Then press <shutter>, three VGA photos have been taken with distinct beeps to be heard from the camera.

Note: the camera will automatically return to preview mode after 5 seconds of inactivity.
