## Preface

This *Maintenance and Service Guide* is a troubleshooting guide that can be used for reference when servicing the Compaq Presario 1800 Series Portable Computers.

Compaq Computer Corporation reserves the right to make changes to the Compaq Presario 1800 Series Portable Computers without notice.

## Symbols

The following words and symbols mark special messages throughout this guide.

 **WARNING:** Text set off in this manner indicates that failure to follow directions in the warning could result in bodily harm or loss of life.

 **CAUTION:** Text set off in this manner indicates that failure to follow directions could result in damage to equipment or loss of data.

**IMPORTANT:** Text set off in this manner presents clarifying information or specific instructions.

**NOTE:** Text set off in this manner presents commentary, sidelights, or interesting points of information.

## Technician Notes

 **WARNING:** Only authorized technicians trained by Compaq should repair this equipment. All troubleshooting and repair procedures are detailed to allow only subassembly/module level repair. Because of the complexity of the individual boards and subassemblies, the user should not attempt to make repairs at the component level or to make modifications to any printed circuit board. Improper repairs can create a safety hazard. Any indications of component replacement or printed circuit board modifications may void any warranty.

## Serial Number

When requesting information or ordering spare parts, the computer serial number should be provided to Compaq. The serial number is located on the bottom of the computer.

## Locating Additional Information

The following documentation is available to support this product:

- Compaq Presario 1800 Series Portable Computer documentation set
- *Introducing Windows 98 Guide*
- Service Training Guides
- Compaq Service Advisories and Bulletins
- *Compaq QuickFind*
- *Compaq Service Quick Reference Guide*

Compaq Presario 1800 Series Portable Computers are a new generation of multimedia portable computers with a thin and light-weight design, outstanding audio and video, advanced core features, and attractive styling.

The 1800T Series allows configure-to-order (CTO) accessibility, providing a range of outstanding and innovative features and components.

# Maintenance & Service Guide

## Troubleshooting

[Preliminary Steps](#)

[Clearing the Power-On Password](#)

[Power-On Self Test \(POST\)](#)

[Compaq Diagnostics](#)

[Diagnostic Error Codes](#)

[Troubleshooting Without Diagnostics](#)

[Solving Minor Problems](#)

[Contacting Compaq Support](#)

This section covers troubleshooting information for the Compaq Presario 1800 Series Portable Computers. The basic steps in troubleshooting include:

1. Follow the [Preliminary Steps](#).
2. Run the [Power-On Self-Test](#) (POST).
3. Follow the recommended actions described in the diagnostic tables if you are unable to run POST or if POST displays an error message.

When following the recommended actions in the Sections on [POST](#) and [Diagnostic Error Codes](#) perform them in the order listed. Rerun POST after each recommended action until the problem is solved and no error message occurs. Once the problem is solved, do not complete the remaining recommended actions.

**NOTE:**

If the problem is intermittent, check the computer several times to verify that the problem is solved.

# Maintenance & Service Guide

## Presario 1800 Series

### Models: 1825 and 1800T

[Home Page](#) | [Notice](#) | [Preface](#) | [Product Description](#) | [Troubleshooting](#)  
[Illustrated Parts Catalog](#) | [Removal & Replacement Procedures](#) | [Specifications](#)  
[Pin Assignments](#) | [Battery Pack Operations](#)

## Battery Pack Operations

This appendix covers the following information concerning battery pack operating time:

- [Increasing battery pack operating time](#)
- [Conditioning a battery pack](#)
- [Disposing of a used battery pack](#)

### Increasing Battery Pack Operating Time

Battery pack operating time differs depending on several variables. To avoid unnecessary replacement, consider the following variables when determining how long a charged battery pack should last:

- Power management settings
- Hardware configuration
- Software applications
- Installed options
- Display brightness
- Hard drive usage
- Changes in operating temperature
- Type and number of installed PC Cards

**NOTE:** The power consumption requirements for PC Cards vary widely. Some cards drain the battery pack very rapidly.

Battery pack operating time can be increased by as much as 50 percent by controlling the energy required by the computer and the energy stored in the battery pack.

#### Minimizing the Energy Required

To minimize the energy required by the computer, follow these guidelines:

- Set the power conservation levels in the Power Management utility to **Maximum**.
- Customize the timeout value to work more efficiently with the applications. The length of battery life depends on the values selected.

#### Maximizing the Energy Stored

To maximize the energy stored in the battery pack, follow these guidelines

- Condition the battery pack at least every 30 days to improve overall battery performance.
- Keep a battery pack in the computer when using it with AC power to supply the battery pack with a constant trickle charge.
- Store the battery pack in a cool, dry place when not in use.

[Top of Page](#)

### Conditioning a Battery Pack

 **CAUTION: To avoid a loss of data, ensure that all data is saved before discharging a battery pack.**

To condition a battery pack, complete the following steps:

- Plug in the AC adapter and allow the battery to charge until the battery charging status icon turns off. Your battery gauge may show four bars (and Windows may report 100%) before the battery charging status icon turns off. Do not unplug the AC adapter until the battery charging status icon disappears.
- Unplug the AC adapter and allow the battery to drain until the computer reaches hibernation and turns itself off. **Do not plug in the AC adapter during this process or you will need to restart with Step 1.** You may use the computer while the battery is draining.
- Plug in the AC adapter and begin using the computer.

The table below shows the approximate battery pack charge times.

Approximate Battery Charge Time		
Computer	On Line	Off Line
Li ion Battery Pack	4.5 hours	2:50 hrs

[Top of Page](#)

### Disposing of a Used Battery Pack

In the interest of safeguarding our environment, Compaq Computer Corporation recommends that nickel metal hydride (NiMH) and lithium ion (Li ion) battery packs be recycled. Battery packs should be handled in accordance with country, state, province, or local regulations.

 **CAUTION:** Never attempt to open or service a battery pack. Opening a battery pack not only damages the pack and makes it unusable, but also exposes potentially harmful battery components.

## Power Management for Windows 98

The following power management features are available for conserving AC power and extending battery operating time:

- [Power Management Settings](#)
- [Hibernation Mode](#)
- [Sleep Mode](#)
- [Battery Operating Time](#)
- [Rebooting After a Lockup](#)
- [Recovering From a Loss of Electrical Power](#)
- [Servicing the Computer - Full Off Mode](#)

### Power Management Settings

Differing patterns of computer use determine the level of power management. These different power management levels can be activated based on the amount of time passed since the last system activity. System activity examples include keyboard or mouse movement, DVD/CD playback (while under program control that monitors Sleep), and modem use.

Select different power settings or schemes through Power Management. The optional settings are **Home/Office Desk**, **Portable/Laptop**, and **Always On**. Change the following settings from the default settings:

- when the computer goes into Sleep (Standby) mode
- when the screen times out and goes blank
- when the hard drive goes into low power mode.

Each of these system components sleeps after the selected or default periods of inactivity. (The setting for hard drive must be less than or equal to the setting for System.)

**IMPORTANT:** If the computer is on a network, Compaq recommends **System Standby** be set to **Never**.

There are five categories of power management settings under the Control Panel. The default setting for each feature is listed below in the tables.

<b>Power Management Properties</b>		
<b>Always on</b>	<b>Plugged in</b>	<b>Running on Batteries</b>
<b>System Standby</b>	Never	5 minutes
<b>Turn OFF Monitor</b>	15 minutes	2 minutes
<b>Turn OFF Hard Disks</b>	1 hour	3 minutes
<b>Portable/Laptop</b>		
<b>System Standby</b>	Never	15 minutes
<b>Turn OFF Monitor</b>	3 hours	Never
<b>Turn OFF Hard Disks</b>	15 minutes	10 minutes
<b>Home/Office Desk</b>		
<b>System Standby</b>	20 minutes	1 minute
<b>Turn OFF Monitor</b>	15 minutes	2 minutes
<b>Turn OFF Hard Disks</b>	30 minutes	10 minutes

 **CAUTION:** The settings on the Alarms tab have been preset for the computer to run at its best. Changing any of these settings could cause the computer to function improperly. It is recommended that these settings be left at their default values.

<b>Power Management Properties</b>	
<b>Alarms:</b>	
<b>Low Battery Alarm:</b>	10%
<b>Critical Battery Alarm</b>	0%
<b>Alarm Actions:</b>	Notification: Text Power Mode: No Action

Compaq Presario 1800 Series Computers have two levels of power management: **Hibernation** and **Sleep**.

**Hibernation** mode occurs by pressing the **Power** button once. The computer saves the contents of the computer memory to the hard drive. This is followed by the computer turning off.

**Sleep** mode is a low-power mode, also referred to as Standby mode. It occurs by pressing the **Fn+F4** function key or by clicking the **Start** button, then **Shutdown**, then **Standby**.

 **CAUTION:** While in Sleep mode, the computer will maintain system information and open files. Unsaved information will be lost if the computer is turned off prior to system wake-up, or if a power loss occurs while using the AC adapter.

The following table shows the conditions and indicators for getting in and out of the various power management modes, Sleep, Hibernation, and Off.

<b>Hibernation and Sleep Functions</b>			
<b>Mode</b>	<b>To Initiate</b>	<b>To End</b>	<b>Indicators</b>
<b>Sleep</b>	<b>Manual</b> - <b>Fn+F4</b> key combination or click the <b>Start</b> button on the Windows Taskbar, then point to <b>Shutdown</b> , then click <b>Standby</b> . <b>Time-Out Default</b> - 15 minutes if using battery power. Computer will not automatically enter Sleep mode if on AC power.	Press any key.	Flashing <b>Power</b> light*  * <b>Moon</b> icon appears on status display (1800 Series only)
<b>Hibernate</b>	<b>Manual</b> - Press <b>Power</b> Button once  <b>Time-Out Default</b> - If your battery is low or after 1 hour of Sleep. Computer will not automatically enter Hibernation mode if on AC power.	Press <b>Power</b> Button once	<b>Power</b> light is off, screen is blank*  * Power icon does not appear on status display (1800 Series only)
<b>Off</b>	<b>Standard</b> - Perform normal Windows shutdown using the <b>Start</b> button on the Windows Taskbar.  <b>Manual*</b> - Press and hold down the <b>Power</b> button for 4 seconds.  *The Manual shutdown mode is not recommended unless the Standard shutdown mode does not work.	Press <b>Power</b> Button once	No <b>Power</b> light (or icon), screen is blank.

### Hibernation Mode

Hibernation helps conserve battery life and protect the data. Hibernation can be a routine power-saving event or the result of a low battery. As the computer enters Hibernation, it automatically saves the content of the computer memory to the hard drive before it turns off.

The computer will automatically enter Hibernation mode when the battery has little power left or when the computer (operating on battery power) has been in Sleep mode for more than one hour. Activate Hibernation mode by pressing the **Power** button once.

To restart the computer, press the **Power** button once. When the computer enters or wakes from Hibernation mode, it displays a Progress window.

[Top of Page](#)

### Sleep Mode

Selecting Sleep mode instead of turning off the computer when finished allows the computer to wake up faster than turning it completely off and saves power over the active (On) mode.

Activate Sleep mode by pressing **Fn+F4**. Or, click **Start**, select the **Shut Down** option, and click **Standby**.

### Servicing the Computer - Full Off Mode

The computer must be turned off *completely* when installing or replacing components in the system. Follow the instructions above for properly putting the computer into Off mode, unplug from the outlet, and remove the battery ([see battery section for instruction on removing battery](#)).

[Top of Page](#)

### Rebooting After a Lockup

To reboot the computer (as if from a cold start), when the keyboard is frozen or the screen is locked, press and hold down the **Power** button for at least four seconds, which will cause a manual shutdown. Then, restart it with a single press of the **Power** button. If it still does not recover, press the **Power** button and hold for four seconds to shut it down, then remove the battery or unplug the AC power for at least 30 seconds. Reinsert the battery or reconnect AC power and press the **Power** button once to reboot.

[Top of Page](#)

### Recovering From a Loss of Electrical Power

Loss of electrical power will cause the Internet PC to automatically turn off. This may cause loss of data because the Microsoft Windows operating system is not able to properly close all files and programs.

Loss of power may be caused by one of the following:

- Electrical power service is interrupted.
- The power cord is accidentally disconnected.

If power surges or sags, the display and status lights may flicker, and the computer may automatically restart. If an improper shutdown occurs, ScanDisk, a Microsoft Windows utility program, will automatically run once power is restored. ScanDisk will determine if the improper shutdown caused any errors on the hard disk. These errors may occur if the Microsoft Windows operating system was not able to properly close all files before the shutdown. If no errors are found, the restart process will continue. If ScanDisk does detect errors, follow the instructions shown to continue the restart process. Work that was not saved prior to the lockup may be lost.

Use of a surge suppressor, line conditioner, or uninterruptible power supply (UPS) may protect the computer from damage caused by power surges or sags.

If a power failure occurs or the power cord disconnects while the computer is turned on, turn off the computer until normal service has been restored. ScanDisk may run to check the hard disk for errors caused by the improper shutdown the next time the computer turns on.

[Top of Page](#)

### Battery Operating Time

Battery operating time is affected by variables such as the following:

- Power conservation settings
- Hardware configuration
- Software applications
- Installed options
- Display brightness
- Hard drive usage
- Changes in operating temperature
- Type and number of installed PC Cards

For more information on increasing battery pack operating time, conditioning the battery pack, and disposing of a used battery pack, refer to the [Battery Pack Operations](#).

---

## Preliminary Steps

Before running [POST](#), complete the following preliminary steps:

1. If a power-on password has been established, type the password and press the **Enter** key. If the password is not known, [clear the password](#).
2. Run [Computer Checkup](#).
3. Turn off the computer and its external devices.
4. Disconnect any external devices that you do not want to test. Do not disconnect the printer if you want to test it or use it to log error messages.

### **IMPORTANT:**

If the problem only occurs when an external device is connected to the computer, the problem may be related to the external device or its cable. Verify this by running POST with and without the external device connected.

5. Install loopback plugs in the serial and parallel connectors if you would like to test these ports.
6. Ensure the hard drive is installed in the computer.
7. Ensure that the battery pack is inserted in the computer and the computer is connected to an external AC power source.

When the preliminary steps are completed, you are ready to run [POST](#).

# Maintenance & Service Guide

## Presario 1800 Series

### Models: 1825 and 1800T

[Pin Assignments](#) | [Battery Pack Operations](#)

## Troubleshooting

### Clearing the Power-on Password

Clearing the power-on password requires removing all Setup attributes that are programmed in the CMOS. The **1** RTC battery is located on the system board directly forward of the fan.

If the password is not known, clear it by performing the following steps:

1. Turn off the computer.
2. Disconnect the power cord.
3. Remove the [battery pack](#).
4. Remove the [palmrest cover with touchpad](#).
5. Remove the [keyboard](#).
6. Remove the [heatspreader](#).
7. Slide the **2** black switch toward the front of the computer to clear CMOS. Hold the switch in the forward position for at least 15 seconds to ensure that the password is cleared. The switch is located on the back of the DVD or CD drive in the middle of the system board.
8. Reassemble the computer.
9. Turn on the computer to verify that the power-on password has been cleared. If it has not been cleared, repeat Steps 1 through 9.

## Power-On Self Test (POST)

### Running POST

To run POST, complete these directions:

Turn off the computer, then turn on the computer. As soon as the Compaq logo appears press the **ESC** key to clear the logo and display the POST messages as they occur.

If POST does not detect any errors, the computer will not beep. This indicates successful completion of the POST test. POST has run successfully and boots from the hard drive (or from a bootable diskette if one is installed in the diskette drive).

If POST detects errors, the errors are indicated by screen and/or audible messages. Refer to "Power-On Self-Test (POST) Codes" in the tables for a list of POST codes and their relevant descriptions.

**NOTE:** If the system is not functioning well enough to run POST, or if the display is not functioning well enough to show POST error messages, refer to the Troubleshooting tables.

Power-On Self-Test Messages	
<b>102-System Board Failure</b>	
<b>Probable Cause</b>	<b>Recommended Action</b>
DMA, timers, etc.	Replace the system board.
<b>162-System Options Not Set</b>	
<b>Probable Cause</b>	<b>Recommended Action</b>
Configuration incorrect	Run Computer Setup.
CMOS reflects that an invalid configuration has been set.	Run Computer Setup.
RAM failure	1. Replace the memory modules. 2. Replace the system board.
Memory test data error	1. Replace the memory modules. 2. Replace the system board.
XX000YZZ RAM failure	Replace the system board.

XX000YZZ 201-Memory Error	
<b>Probable Cause</b>	<b>Recommended Action</b>
	1. Replace the memory modules. 2. Replace the system board.

301-Keyboard Error	
<b>Probable Cause</b>	<b>Recommended Action</b>
Keyboard failure	1. Ensure the keys are not depressed during POST. 2. Reconnect the keyboard with the computer off. 3. Replace the keyboard.

304-Keyboard or System Unit Error	
<b>Probable Cause</b>	<b>Recommended Action</b>
Keyboard or system board error	1. Replace the keyboard. 2. Replace the TouchPad or mouse. 3. Replace the system board.

601-Diskette Controller Error	
<b>Probable Cause</b>	<b>Recommended Action</b>
Mismatch in drive type or failure in the diskette controller	1. Run Computer Checkup (TEST). 2. Check and/or replace cables. 3. Replace the system board.

605-Diskette Drive Error	
<b>Probable Cause</b>	<b>Recommended Action</b>
Mismatch in drive type	Run Computer Setup.

1780-Primary Hard Drive 0 Failure	
<b>Probable Cause</b>	<b>Recommended Action</b>
Disk 0 failed to respond	1. Run Computer Checkup (TEST). 2. Replace the hard drive.
Hard drive format error	1. Run Computer Checkup (TEST). 2. Replace the hard drive.

1782-Hard Drive Controller	
<b>Probable Cause</b>	<b>Recommended Action</b>
Hard drive controller failure	1. Run Computer Setup. 2. Replace the hard drive.

## Compaq Diagnostics

Compaq Diagnostics is installed on the hard drive of the computer. Run the Diagnostics utilities when you want to view or test system information and if you have installed or connected devices. If you run Compaq Diagnostics from a diskette, ensure that it is version 10.11 or later.

The Diagnostics menu includes the following utilities:

- [Computer Checkup \(TEST\)](#)
- [View System Information \(INSPECT\)](#)
- [Prepare Computer for a Compaq Service Call \(RemotePaq\)](#)

If you have a problem you cannot solve, run the Diagnostics utilities before you call for support. Run Computer Checkup and select to save the device list to a file and to print or to save the log of errors. Run the View System Information (INSPECT) utility and select to print or to save that information. Have the files or the printed information available when you call for support.

### Computer Checkup (TEST)

Computer Checkup (TEST) determines whether the various computer components and devices are recognized by the system and are functioning properly. You can display, print, or save the information generated by Computer Checkup.

Follow these steps to run Computer Checkup:

1. Plug the computer into an external power source. (A low battery condition could interrupt the program.)
2. Turn on the external devices that you want to test. Connect the printer if you want to print a log of error messages.
3. Insert the Compaq Diagnostics diskette in drive A.
4. Turn on or restart the computer. The computer starts from drive A, and the **Diagnostics Welcome** screen appears.
5. Press **Enter** to continue. The **Diagnostics** menu appears.
6. Select Computer Checkup from the **Diagnostics** menu. A **Test Option** menu appears.
7. Select **View the Device List** from the **Test Option** menu. A list of the installed Compaq devices appears.
8. If the list of installed devices is correct, select **OK**. The **Test Option** menu appears.

**NOTE:** If the list is incorrect, ensure that any new devices are installed properly.

9. Select one of the following from the **Test Option** menu:
  - Quick Check Diagnostics. Runs a quick, general test on each device with a minimal number of prompts. If errors occur, they display when the testing is complete. You cannot print or save the error messages.
  - Automatic Diagnostics. Runs unattended, maximum testing of each device with minimal prompts. You can choose how many times to run the tests, to stop on errors, or to print or save a log of errors.
  - Prompted Diagnostics. Allows maximum control over testing the devices. You can choose attended or unattended testing, decide to stop on errors, or choose to print or save a log of errors.
10. Follow the instructions on the screen as the devices are tested. When testing is complete, the **Test Option** menu appears.
11. Exit the **Test Option** menu.
12. Exit the **Diagnostics** menu.

### View System Information (INSPECT)

The View System Information (INSPECT) utility provides information about the computer and installed or connected devices. You can display, print, or save the information.

Follow these steps to run View System Information (INSPECT) from the Compaq Diagnostics diskette:

1. Turn on the external devices that you want to test. Connect the printer if you want to print the information.
2. Insert the Compaq Diagnostics diskette in drive A.
3. Turn on or restart the computer. The computer starts from drive A, and the **Diagnostics Welcome** screen appears.
4. Press **Enter** to continue. The Diagnostics menu appears.
5. Select **View System Information (INSPECT)** from the **Diagnostics** menu.
6. Select the item you want to view from the following list:

System	Memory
ROM	Audio
Keyboard	Operating system
System ports	System files
System storage	Windows files
Graphics	
7. Follow the instructions on the screen to cycle through the screens, to return to the list and choose another item, or to print the information.

## Contacting Compaq Support

Obtain the following information before contacting Compaq Reseller Support:

- Product name
- Product serial number
- Purchase date
- Conditions under which the problem occurred
- Any error messages that have occurred
- Hardware configuration
- Type of printer connected
- Hardware/software being used
- Printed result of Computer Checkup (TEST)
- Printed copies of *CONFIG.SYS* and *AUTOEXEC.BAT* files, if possible

### **Shipping Preparation**

To ship the computer, complete the following steps:

1. Back up the critical hard drive files. Ensure that backup tapes/diskette are not exposed to electrical or magnetic fields while stored in transit.
2. Turn off the computer and external devices.
3. Disconnect the external devices from their power sources, then from the computer.

#### **IMPORTANT:**

Ensure that there is no diskette in the diskette drive and that there are no PC Cards in the PC slots.

4. Close the display and all exterior doors of the computer.

5. Pack the computer with sufficient packing material to protect it. Use the original packing box or similar packaging.

## Diagnostic Error Codes

Diagnostic error codes occur if the system recognizes a problem while running the Compaq Diagnostic program. These error codes help identify possibly defective subassemblies.

The following tables list error codes, a description of the error condition, and the action required to resolve the error condition.

**IMPORTANT:** Retest the system after completing each step. If the problem has been resolved, do not proceed with the remaining steps.

For the removal and replacement of a particular subassembly, see [Removal and Replacement Procedures](#).

Select error codes by number or type:

[101 through 114](#)

Processor Test Error Codes			
Error Code	Description	Recommended Action	
101-xx	CPU test failed	Replace the processor and retest.	
102-xx	Coprocessor or Weitek Error	1. Run the Configuration and Diagnostics Utilities. 2. Replace the processor board and retest.	
103-xx	DMA page registers test failed	Replace the system board and retest.	
104-xx	Interrupt controller master test failed		
105-xx	Port 61 error		
106-xx	Keyboard controller self-test failed		
107-xx	CMOS RAM test failed		
108-xx	CMOS interrupt test failed		
109-xx	CMOS clock test failed		
110-xx	Programmable timer load data test failed		
113-xx	Protected mode test failed		
114-01	Speaker test failed		1. Check system configuration. 2. Verify cable connections to speaker. 3. Replace the system board and retest.
Memory Test Error Codes			
200-xx	Memory machine ID test failed	1. Flash the system ROM and retest. 2. Replace the system board and retest.	
202-xx	Memory system ROM checksum failed		
203-xx	Write/Read test failed	1. Remove the memory module and retest. 2. Install a new memory module and retest.	
204-xx	Address test failed		
211-xx	Random pattern test failed		
214-xx	Noise test failed		
215-xx	Random address test failed		
Keyboard Test Error Codes			
300-xx	Failed ID Test	1. Check the keyboard connection. If disconnected, turn off the computer and connect the keyboard.	
301-xx	Failed Self-test/Interface Test		
302-xx	Failed Individual Key Test	2. Replace the keyboard and retest.	
304-xx	Failed Keyboard Repeat Test		
3. Replace the system board and retest.			
Parallel Printer Test Error Codes			
401-xx	Printer failed or not connected	1. Connect the printer. 2. Check power to the printer. 3. Install the loop-back connector and retest. 4. Check port and IRQ configuration. 5. Replace the system board and retest.	
402-xx	Failed Port Test		
403-xx	Printer pattern test failed		
Diskette or LS 120 Drive Test			
600-xx	Diskette or LS120 ID drive types test failed		1. Replace the diskette media and retest. 2. Check and/or replace the diskette power and signal cables and retest. 3. Replace the diskette or LS120 drive and retest. 4. Replace the system board and retest.
601-xx	Diskette or LS120 format failed		
602-xx	Diskette or LS 120 read test failed		
603-xx	Diskette or LS120 write, read, compare test failed		
604-xx	Diskette or LS120 random read test failed		
605-xx	Diskette or LS120 ID media failed		
606-xx	Diskette or LS120 speed test failed		
609-xx	Diskette or LS120 reset controller test failed		
610-xx	Diskette or LS120 change line test failed		
697-xx	Diskette or LS120 type error		
698-xx	Diskette or LS120 drive speed not within limits		
699-xx	Diskette or LS120 drive/media ID error	1. Replace media. 2. Run the Configuration and Diagnostics Utilities.	
Serial Test Error Codes			
1101-xx	Serial port test failed	1. Check port configuration 2. Replace the system board and retest.	
Hard Drive Test Error Codes			
1701-xx	Hard drive format test failed	1. Run the Configuration and Diagnostics Utilities and verify drive type. 2. Verify that all secondary drives have secondary drive capability. 3. Replace the hard drive and retest. 4. Replace the system board and retest.	
1702-xx	Hard drive read test failed		
1703-xx	Hard drive write/read/compare test failed		
1704-xx	Hard drive random seek test failed		
1705-xx	Hard drive controller test failed		
1706-xx	Hard drive ready test failed		
1707-xx	Hard drive recalibration test failed		
1708-xx	Hard drive format bad track test failed		
1709-xx	Hard drive reset controller test failed		
1710-xx	Hard drive park head test failed		
1715-xx	Hard drive head select test failed		
1716-xx	Hard drive conditional format test failed		
1717-xx	Hard drive ECC* test failed		
1719-xx	Hard drive power mode test failed		
1724-xx	Network preparation test failed		
1736-xx	Drive monitoring test failed		
* ECC = Error Correction Code			
Video Test Error Codes			
501-xx	Video controller test failed	The following steps apply to error codes 501-xx through 516-xx:  1. Disconnect external monitor and test with internal LCD display. 2. Replace the display assembly and retest. 3. Replace the system board and retest.	
502-xx	Video memory test failed		
503-xx	Video attribute test failed		
504-xx	Video character set test failed		
505-xx	Video 80 x 25 mode 9 x 14 character cell test failed		
506-xx	Video 80 x 25 mode 8 x 8 character cell test failed		
507-xx	Video 40 x 25 mode test failed		
508-xx	Video 320 x 200 mode color set 0 test failed		
509-xx	Video 320 x 200 mode color set 1 test failed		
510-xx	Video 640 x 200 mode test failed		
511-xx	Video screen memory page test failed		
512-xx	Video gray scale test failed		
514-xx	Video white screen test failed		
516-xx	Video noise pattern test failed		
2402-xx	Video memory test failed	The following steps apply to error codes 2402-xx through 2456-xx:  1. Run the Configuration and Diagnostics Utilities. 2. Replace the display assembly and retest. 3. Replace the system board and retest.	
2403-xx	Video attribute test failed		
2404-xx	Video character set test failed		
2405-xx	Video 80 x 25 mode 9 x 14 character cell test failed		
2406-xx	Video 80 x 25 mode 8 x 8 character cell test failed		
2408-xx	Video 320 x 200 mode color set 0 test failed		
2409-xx	Video 320 x 200 mode color set 1 test failed		
2410-xx	Video 640 x 200 mode test failed		
2411-xx	Video screen memory page test failed		
2412-xx	Video gray scale test failed		
2414-xx	Video white screen test failed		
2416-xx	Video noise pattern test failed		
2418-xx	ECG/VGC memory test failed		
2419-xx	ECG/VGC ROM checksum test failed		1. Run the Configuration and Diagnostics Utilities. 2. Disconnect external monitor and test with internal LCD display. 3. Replace the display assembly and retest. 4. Replace the system board and retest.
2421-xx	ECG/VGC 640 x 200 graphics mode test failed		
2422-xx	ECG/VGC 640 x 350 16 color set test failed		
2423-xx	ECG/VGC 640 x 350 64 color set test failed		
2424-xx	ECG/VGC monochrome text mode test failed		
2425-xx	ECG/VGC monochrome graphics mode test failed		
2431-xx	640 x 480 graphics test failure		
2432-xx	320 x 200 graphics (256 color mode) test failure		
2448-xx	Advanced VGA Controller test failed		
2451-xx	132-column Advanced VGA test failed		
2456-xx	Advanced VGA 256 Color test failed		
2458-xx	Advanced VGA BitBLT test	The following step applies to error codes 2458-xx through 2480-xx:  Replace the system board and retest.	
2468-xx	Advanced VGA DAC test		
2477-xx	Advanced VGA data path test		
2478-xx	Advanced VGA BitBLT test		
2480-xx	Advanced VGA LineDraw test		
Audio Test Error Codes			
3206-xx	Audio System Internal Error	Replace the system board and retest.	
TouchPad/Pointing Device Interface Test Error Codes			
8601-xx	Mouse test failed	1. Replace the TouchPad and retest. 2. Replace the system board and retest.	
8602-xx	Interface test failed		
DVD or CD Drive Test Error Codes			
3301-xx	DVD or CD drive read test failed	1. Replace the DVD or CD and retest. 2. Verify that the speakers are connected. 3. Verify that drivers are loaded and properly installed. 4. Replace the DVD or CD drive and retest. 5. Replace the system board and retest.	
3305-xx	DVD or CD drive seek test failed		
6600-xx	ID test failed		
6605-xx	Read test failed		
6608-xx	Controller test failed		
6623-xx	Random read test failed

# Maintenance & Service Guide

## Presario 1800 Series

### Models: 1825 and 1800T

[Home Page](#) | [Notice](#) | [Preface](#) | [Product Description](#) | [Troubleshooting](#)  
[Illustrated Parts Catalog](#) | [Removal & Replacement Procedures](#) | [Specifications](#)  
[Pin Assignments](#) | [Battery Pack Operations](#)

---

## Troubleshooting Without Diagnostics

This section provides information about how to identify and correct some common hardware, memory, and software problems. It also explains several types of common messages that may be displayed on the screen. The following pages contain troubleshooting information on:

[Audio](#)

[Battery](#)

[DVD or CD drive](#)

[Diskette or LS120 Drive](#)

[Display](#)

[Hard drive](#)

[Hardware Installation](#)

[Memory](#)

[PC Card](#)

[Power](#)

[Printer](#)

[TouchPad](#)

[Keyboard/Numeric keypad](#)

Since symptoms can appear to be similar, carefully match the symptoms of the computer malfunction against the problem description in the Troubleshooting tables to avoid a misdiagnosis.

**WARNING:** To avoid a potential shock hazard during troubleshooting procedures, disconnect all power sources before removing the keyboard cover or the display bezel.

### ***Before Replacing Parts***

Verify that cables are connected properly to the suspected defective parts.

- Run Computer Setup after connecting external devices.
- Verify that all required device drivers are installed.
- Verify that all required changes have been made to the *CONFIG.SYS* file.
- Verify that all required changes have been made to the *AUTOEXEC.BAT* file.
- Verify that all printer drivers have been installed for each application.

## Maintenance & Service Guide Presario 1800 Series Models: 1825 and 1800T

[Home Page](#) | [Notice](#) | [Preface](#) | [Product Description](#) | [Troubleshooting](#)  
[Illustrated Parts Catalog](#) | [Removal & Replacement Procedures](#) | [Specifications](#)  
[Pin Assignments](#) | [Battery Pack Operations](#)

### Solving Minor Problems

Some minor problems and possible solutions are outlined in the following tables. If the problem appears related to a software application, check the documentation provided with the software.

#### Solving Audio Problems

Some common audio problems and solutions are listed in the following table.

Solving Audio Problems		
Problem	Probable Cause	Solution(s)
Computer does not beep after the Power-On Self-Test (POST).	This is typical; it indicates successful completion of the Power-On Self-Test (POST).	No action is required.

#### Solving Battery Pack and Battery Gauge Problems

Some common causes and solutions for battery pack problems are listed in the following table. The "Solving Power Problems" section in this chapter may also be applicable.

Solving Battery Pack and Battery Gauge Problems		
Problem	Probable Cause	Solution(s)
Computer won't turn on when battery pack is inserted and power cord is unplugged.	Battery pack is discharged.	Connect the computer to an external power source and charge the battery pack.  Replace the battery pack with a fully charged battery pack.  Check the battery connectors on the system board to verify they are evenly spaced and that they are not bent or broken.
Computer is beeping and battery icon is blinking.	Battery charge is low.	Immediately save any open file(s). Then do any one of the following: <ul style="list-style-type: none"> <li>Connect the computer to an external power source to charge the battery pack.</li> <li>Turn off the computer or initiate Hibernation until you can find another power source or charge the battery pack.</li> </ul>
Computer battery icon (front on the unit) blinks to indicate low battery condition, but computer does not beep.	Volume is turned down too low.	Adjust the volume.
Battery icon doesn't light and battery pack won't fast charge.	Battery pack is already charged.	No action is necessary.
	Battery pack was exposed to temperature extremes.	Allow time for the battery pack to return to room temperature.
You have to set the date and time every time you turn on the computer.	Battery pack is at end of its life.	Replace battery pack.
	RTC battery is dead.	Replace the RTC battery.

[Top of Page](#)

Problem	Probable Cause	Solution(s)
Battery charge does not last as long as expected.	Battery is being exposed to high temperatures or extremely cold temperatures.	Keep the battery pack within the recommended operating temperature range 50° F to 104° F (10° C to 40° C) or recommended storage range -4° F to 86° F (-20° C to 30° C). Recharge the battery pack.
	Battery has partially self-discharged.	Recharge the battery. Discharge the battery completely and then recharge it.
	Power management is disabled.	Set a power management level in Computer Setup.
	An external device or PC Card is draining the battery.	Turn off or disconnect external devices when not using them.
Battery pack is warm to the touch after charging.	Normal warming has occurred due to charging.	No action is required.
	Power management is turned off or disabled.	Enable power management in Computer Setup and in Windows Power Properties.
Battery pack operating time is far less than the documented average operating time.	An external device or PC Card is draining the battery.	Turn off or disconnect external devices when not using them.
	Battery pack has partially self-discharged.	Condition the battery pack by fully charging, fully discharging, then fully recharging it.  To maintain the charge, leave battery packs in the computer when it is connected to external power.  If the computer is disconnected from external power for more than two weeks, remove battery packs from the computer to reduce the discharge rate.
	Battery pack is being exposed to high temperatures or extremely cold temperatures.	Keep the battery pack within the recommended temperature ranges. Operating: 50° F to 104° F (10° C to 40° C) Storage: -4° F to 86° F (-20° C to 30° C)
		Recharge the battery pack.

[Top of Page](#)

#### Solving DVD or CD Drive Problems

Some common causes and solutions for DVD or CD drive problems are listed in the following table.

Solving DVD or CD Drive Problems		
Problem	Probable Cause	Solution(s)
DVD or CD drive cannot read a compact disc.	Disc is upside down or is improperly inserted in the DVD or CD drive.	Open the loading tray, lay the compact disc in it (label side up), then close the tray.
	CD is CD Plus or Pregap/Track 0 type.	Cannot read these type CDs in 24x. Remove the CD.

[Top of Page](#)

#### Solving Diskette or LS120 Drive Problems

Some common causes and solutions for diskette and LS120 drive problems are listed in the following table.

Solving Diskette and Diskette Drive Problems		
Problem	Probable Cause	Solution(s)
Diskette or LS120 drive cannot write to a diskette.	Diskette is write-protected.	Disable the diskette's write-protect feature or use a diskette that is not write-protected.
	Computer is writing to the wrong drive.	Check the drive letter in the path statement.
	Not enough space is left on the diskette.	Use another diskette.
	Drive error has occurred.	Run Computer Checkup from the Compaq Diagnostics diskette.
Diskette or LS120 drive cannot read a diskette.	Diskette is not formatted.	Format the diskette. At the system prompt, enter  FORMAT A:
	The wrong type of diskette is being used.	Use the type of diskette required by the drive.
	Diskette has a bad sector.	Copy files to hard drive or another diskette. Reformat bad floppy.
	Drive error has occurred.	Run Computer Checkup from the Compaq Diagnostics diskette.
Cannot boot from diskette.	Diskette is not formatted.	Format the diskette. At the system prompt, enter  FORMAT A:
	Bootable diskette is not in drive A. Diskette Boot has incorrect setting in Computer Setup.	Put the bootable diskette in drive A. Run Computer Setup and set diskette as first to boot.

[Top of Page](#)

#### Solving Display Problems

This section lists some common causes and solutions for computer display and external monitor problems.

You can perform a monitor self-test on an external VGA color or monochrome monitor by disconnecting the monitor from the computer. To do so, complete the following steps:

- Turn off the monitor.
- Turn off the computer.
- Disconnect the monitor signal cable from the computer.
- Turn on the monitor and allow it to warm up for one minute.

The display should be white. A narrow black border may also appear on the left and right sides of the display. Either of these displays indicates that the monitor is working properly.

Solving Display Problems		
Problem	Probable Cause	Solution(s)
Screen is dim.	Control for brightness	Adjust the Brightness of the display by using <b>Fn + F7</b> ( ) or <b>Fn + F8</b> ( - ).
	Computer screen is in direct light.	Tilt display or move computer.
Screen is blank.	Screen save was initiated by Power Management due to lack of user activity.	Press any key or touch the TouchPad.
	Display has overheated.	If computer is in direct sunlight, move it and allow it to cool off.
Display is blank and the Suspend icon is flashing.	System is in Suspend mode.	Press any key or touch the TouchPad.
Internal display is blank and the screen on an external monitor displays information.	Display function was switched to the external monitor.	Use <b>Fn + F3</b> to switch between <b>LCD</b> or <b>CRT</b> .

[Top of Page](#)

Problem	Probable Cause	Solution(s)
Internal display flashes or has garbled characters when computer is connected to external monitor.	Using 1024 × 768 or higher resolution on external monitor and have toggled back to internal display, which supports up to 800 × 600.	Restart the computer.
The light tubes on the edge of the display panel do not light up at all and Power-On Self-Test (POST) completes when the unit is powered up.**	Improper backlight or display cable connections	Replace the display assembly.
	Defective inverter board.	Replace the display assembly.
	Defective display cable.	Replace the display assembly.
	Defective display panel.	Replace the display assembly.
The light tubes on the edge of the display panel do not light up at all and Power-On Self-Test (POST) does not complete when the unit is powered up.**	Defective system board.	Replace the system board.
Backlight (brightness) cannot be adjusted with <b>Fn + F7</b> ( ) or <b>Fn + F8</b> ( - ).**	Improper display cable connections.	1. Reseat the display cable to the system board. 2. Replace the display assembly.
	Defective inverter board.	Replace the display assembly.
	Defective display cable.	Replace the display assembly.
	Defective system board.	Replace the system board.

\*\* This problem indicates that the backlight or its power circuitry has failed. Since you cannot observe the POST result on the display panel when the backlight is not functioning, connect the unit to an external monitor before powering the unit up. If an external monitor is not available, verify that POST completes by opening and closing the display, listening for the single or double beep, and watching for the icons to turn on at the front of the computer.

Problem	Probable Cause	Solution(s)
This display panel has a continuous pattern across it (e.g., a "jailbars" pattern), has a single color on it, or has garbled graphics across the entire panel. This failure is for patterns across the entire panel (not just on one section).	Improper display cable connections	Reseat the display cable to the following until the problem is solved: <ol style="list-style-type: none"> <li>System board</li> <li>Display assembly</li> </ol>
	Defective display cable.	Replace the display assembly.
	Defective inverter board.	Replace the display assembly.
	Defective system board.	Replace the system board.
A single line, small group of lines, or block appears on the display panel. This failure occurs in only a section of the display panel.	Defective display panel.	Replace the display assembly.

[Top of Page](#)

**NOTE:** To perform a "self-test" on an external VGA color or monochrome monitor, complete the following steps: the screen should be white. A narrow black border may also appear on the left and right sides of the display. Either of these displays indicates that the monitor is working properly.

#### Solving Hard Drive Problems

Some common causes and solutions for hard drive problems are listed in the following table.

	<b>CAUTION:</b> To prevent loss of information, always maintain an up-to-date backup of your hard drive at all times, in case of errors or failures.
--	--

Solving Hard Drive Problems		
Problem	Probable Cause	Solution(s)
Reading hard drive takes an unusually long time after restarting the computer.	System entered Hibernation due to low battery condition and is now exiting from it.	Give the system time to restore the previously saved data to its exact state before Hibernation.
Hard drive error occurs.	Hard drive has bad sectors or has failed.	Run Computer Checkup.
Hard drive does not work.	Hard drive is not seated properly.	Turn off and unplug the computer, remove the battery pack, and remove and then reinstall the hard drive.

#### Solving Hardware Installation Problems

Some common causes and solutions for hardware installation problems are listed in the following table.

Solving Hardware Installation Problems		
Problem	Probable Cause	Solution(s)
A new device is not recognized as part of the computer system.	Cable(s) of new external device are loose or power cables are unplugged.	Ensure that all cables are properly and securely connected.
	Power switch of new external device is not turned on.	Turn off the computer, turn on the external device, then turn on the computer to integrate the device with the computer system.
	Device is not seated properly.	Turn off the computer and reinsert the device.

[Top of Page](#)

#### Solving Keyboard/Numeric Keypad Problems

Some common causes and solutions for keyboard/numeric keypad problems are listed in the following table.

Solving Keyboard/Numeric Keypad Problems		
Problem	Probable Cause	Solution(s)
Embedded numeric keypad on computer keyboard is disabled.	Num Lock function is not enabled.	Press the <b>Shift + NumLk</b> keys to enable the Num Lock function and embedded numeric keypad. The Num Lock icon on the status panel turns on.
Embedded numeric keypad is disabled and Num Lock function is on.	External numeric keypad is connected to the computer.	Disconnect the external numeric keypad from the computer.

[Top of Page](#)

#### Solving Memory Problems

Some common causes and solutions for memory problems are listed in the following table.

Solving Memory Problems		
Problem	Probable Cause	Solution(s)
Memory count during Power-On Self-Test (POST) is incorrect.	Optional memory expansion card is installed incorrectly, is incompatible with the computer, or is defective.	Ensure that the optional memory expansion card is installed correctly.
"Out of Memory" message is displayed on the screen or insufficient memory error occurs during operation.	System ran out of memory for the application.	Check the application documentation for memory requirements.  Install additional memory.
	Too many TSR (terminate-and-stay-resident) applications are running.	Remove from memory any TSR applications that you do not need.

### ***Solving PC Card Problems***

Some common causes and solutions for PC Card problems are listed in the following table.

<b>Solving PC Card Problems</b>		
<b>Problem</b>	<b>Probable Cause</b>	<b>Solution(s)</b>
When turned on, the computer does not beep when a PC Card is inserted.	Card is not inserted properly.	Ensure that the card is inserted in the correct orientation.
	PC Card beeps are disabled.	Double-click the PC Card icon in the Control Panel, click the <b>Global Settings</b> tab, the enable PC Card sound effects.
	Speaker is turned off or volume is turned down.	Press <b>volume buttons</b> to turn the speaker on, then increase the volume.
	PC Card drivers are not installed.	Double click the <b>Add New Hardware</b> icon in the Control Panel for installation instructions.  If PC Card or drivers are not compatible with Windows, install drivers and use the PC Card in MS-DOS mode.
PC Card modem, fax, or network card does not work.	Card or card driver is not supported.	Contact your Compaq authorized service provider for a list of PC Cards tested successfully in Compaq PC Card platforms.
	Card is not fully inserted into the slot or is not inserted properly.	Ensure that the card is inserted in the correct orientation.
	Telephone cord is not plugged in all the way.	Check and secure telephone connection.
PC Card modem or fax card does not work.	Necessary drivers are not installed (turned on).	Install drivers.
	You are trying to access the card using the wrong COM port.	See <a href="#">Specifications</a> to verify COM port.
	The card conflicts with a serial device.	See <a href="#">Specifications</a> to verify address.
	The card is not supported.	Use supported cards only.

Modem network PC Card does not work.	Network driver is not installed or is not set up properly.	Install driver.
	Telephone cord is not properly connected.	Verify telephone connection.
Memory or storage card does not work.	SRAM and flash memory cards require the memory card driver to be loaded (turned on).	Install driver.
	Flash memory cards require the Microsoft FlashFile System to be loaded.	
	Hard drives on flash mass storage cards require the PC Card ATA driver to be loaded.	
	You are trying to access the hard drive card using the wrong drive letter.	Double-click <b>My Computer</b> to verify the drive letter assigned to the card.
	The card is not supported.	Contact your Compaq authorized service provider for a list of PC Cards tested successfully in Compaq PC Card platforms.

[Top of Page](#)

### ***Solving Power Problems***

Also see "[Solving Battery and Battery Gauge Problems](#)" in this section.

<b>Solving Power Problems</b>		
<b>Problem</b>	<b>Probable Cause</b>	<b>Solution(s)</b>
Computer won't turn on and battery pack is not inserted.	Computer is not connected to a power source.	Insert battery or connect an external power source.
	Power cords to the external power source are unplugged.	Ensure that power cords connecting the computer and the external power source are plugged in properly.
	Power adapter is defective.	Replace AC Adapter and restart.
Computer turned off while it was left unattended and the power icon is off.	System board is defective.	Replace the system board.
	System initiated Hibernation due to a critical low-battery condition.	Replace the battery pack with a fully charged battery pack or connect the computer to an external power source. Then turn on the computer.
	System initiated Hibernation after a preset timeout.	Turn on the computer.

[Top of Page](#)

### ***Solving Printer Problems***

If you experience problems printing, run a printer self-test. Refer to the documentation provided with your printer for instructions.  
 If the self-test fails, it is a printer-specific problem. Also refer to the printing section of your application documentation.

<b>Solving Printer Problems</b>		
<b>Problem</b>	<b>Probable Cause</b>	<b>Solution(s)</b>
Printer will not turn on.	The signal cable may not be connected properly, or the printer is unplugged.	Ensure that the signal cable is properly connected and that the power cord is connected to the electrical outlet.
Printer will not print.	Printer is not turned on or is offline.	Turn the printer on and set it to online.
	The device drivers for your application are not installed.	Refer to the printer documentation to install the correct printer driver.
	Printer that is set up for a network is not connected to the network.	Connect the printer to the network.
	Printer cable is too long, unshielded, or defective.	Replace the cable.
	Paper tray is empty.	Fill the paper tray with paper and set the printer to online.
Printer prints garbled information.	Correct printer drivers are not installed.	Refer to the printer documentation to install the correct printer driver.
	Cable is not connected properly.	Ensure that the printer signal cable is properly connected to the computer.

[Top of Page](#)

### ***Solving TouchPad/Pointing Device Problems***

Some common causes and solutions for TouchPad/pointing device problems are listed in the following table.

<b>Solving Touch Pad/Pointing Device Problems</b>		
<b>Problem</b>	<b>Cause</b>	<b>Solution(s)</b>
TouchPad or mouse does not work.	Incorrect or no device driver is installed.	Install the device driver and add to the AUTOEXEC.BAT file or CONFIG.SYS file.
	The device driver is not installed in Windows.	Install the TouchPad/mouse driver in Windows.
External mouse does not work.	Mouse is not securely connected or is connected to an incorrect external connector.	Ensure that the mouse is securely connected to the appropriate external connector.
TouchPad or mouse does not work even though the device is enabled in Windows.	Mouse is not enabled.	Enter MOUSE at the system prompt to activate the mouse device driver. Add a line in the AUTOEXEC.BAT file to automatically activate the mouse device driver each time computer is turned on or restarted.
	Cable not properly seated in TouchPad board.	Reseat cable.
	Defective TouchPad board.	Replace TouchPad board.
	Defective system board.	Replace system board.
	Device driver is not correctly installed in Windows.	Install the appropriate device driver in Windows.
Cursor skips or moves abnormally when using the TouchPad.	The TouchPad needs to be cleaned.	Clean the TouchPad with a cloth dampened with alcohol or an ammonia-based glass cleaner. Wipe up liquid with a dry cloth.

## Electrostatic Discharge

A sudden discharge of static electricity from a finger or other conductor can destroy static-sensitive devices or microcircuitry. Often the spark is neither felt nor heard, but damage occurs. An electronic device exposed to electrostatic discharge (ESD) may not seem to be affected at all and will work perfectly throughout a normal cycle. Although, it may function normally for a while, it may be degraded in the internal layers, reducing its life expectancy.

Networks built into many integrated circuits provide some protection, but in many cases, the discharge contains enough power to alter device parameters or melt silicon junctions.

## Generating Static

The table shows how different activities generate static electricity at different electrostatic voltage levels.

Typical Electrostatic Voltages			
Event	Relative Humidity		
	10%	40%	55%
Walking across carpet	35,000 V	15,000 V	7,500 V
Walking across vinyl floor	12,000 V	5,000 V	3,000 V
Motions of bench worker	6,000 V	800 V	400 V
Removing DIPS from plastic tubes	2,000 V	700 V	400 V
Removing DIPS from vinyl trays	11,500 V	4,000 V	2,000 V
Removing DIPS from Styrofoam	14,500 V	5,000 V	3,500 V
Removing bubble pack from PCBs	26,000 V	20,000 V	7,000 V
Packing PCBs in foam-lined box	21,000 V	11,000 V	5,000 V
<b>NOTE:</b> 700 volts can degrade a product.

## Service Considerations

Listed below are some of the considerations that you should keep in mind during the disassembly and assembly of the computer.

### *Tool and Software Requirements*

To service the computer, you need the following:

- Torx T-8 or T-9 screwdriver
- 5mm nut drivers (for screwlocks and standoffs)
- Small standard screwdriver
- Small Phillips screwdriver
- Diagnostics software

### *Screws*

The screws used in the computer are not interchangeable. If an incorrect screw is used during the reassembly process, it can damage the unit. Compaq strongly recommends that all screws removed during disassembly be kept with the part that was removed, then returned to their proper locations.

#### **IMPORTANT:**

As each subassembly is removed from the computer, it should be placed away from the work area to prevent damage.

### **Return to Removal & Replacement Procedures**

[Pin Assignments](#) | [Battery Pack Operations](#)

---

## Cables and Connectors

Most cables used throughout the unit are ribbon cables. Cables must be handled with extreme care to avoid damage. Apply only the tension required to seat or unseat the cables during insertion or removal from the connector. Handle cables by the connector whenever possible. In all cases, avoid bending, twisting, or tearing the cables, and ensure that the cables are routed in such a way that they cannot be caught or snagged by parts being removed or replaced.

### Cables

Use the following precautions when handling cables to avoid damage to the cable or computer:

- Always handle cables by their connectors.
- Avoid bending, twisting, or pulling on the cables.
- Apply minimum required force when seating or unseating the cables from their connectors.
- Place the cables in such a manner that they cannot be caught or snagged by parts being removed or replaced.
- Handle flex cables with extreme care; they can tear easily.

**CAUTION:** When servicing these computers, ensure that cables are placed in their proper location during the reassembly process. Improper cable placement can cause severe damage to the unit.

The cable position for the [modem](#).

The cable position for the [Network Interface Card](#).

The ribbon cable position for the [keyboard](#).

### Plastic Parts

Plastic parts can be damaged by the use of excessive force during disassembly and reassembly. When handling the plastic parts, use care. Apply pressure only at the points designated in the maintenance instructions.

## Presario 1800 Series

### Models: 1825 and 1800T

[Home Page](#) | [Notice](#) | [Preface](#) | [Product Description](#) | [Troubleshooting](#)  
[Illustrated Parts Catalog](#) | [Removal & Replacement Procedures](#) | [Specifications](#)  
[Pin Assignments](#) | [Battery Pack Operations](#)

The computer uses a zero insertion force (ZIF) connector for the keyboard cable to the system board. To remove a cable from a ZIF connector, lift both corners of the ZIF connector and slide simultaneously with constant light force.

**CAUTION:** A ZIF connector and its attached cable can be easily damaged. Handle only the connector slide when removing or replacing a cable. Never pull or twist on the cable while it is connected.

**CAUTION:** When servicing this computer, ensure that cables are placed in their proper location during the reassembly process. Improper cable placement can damage the computer.

Before beginning [Removal & Replacement Procedures](#), complete the following steps:

1. Disconnect AC power and any external devices.
2. [Remove the battery pack](#).
3. Remove any PC Cards.
4. [Remove the Port Replicator](#).

#### IMPORTANT:

The battery pack should be removed before performing any internal maintenance on the computer.

**WARNING:** Metal objects can damage the battery pack as well as the battery contacts in the battery compartment. To prevent damage, do not allow metal objects to touch the battery contacts. Place only the battery pack for the Compaq Presario 1800 Series Portable Computers into the battery compartment. Do not force the battery pack into the bay if insertion does not occur easily.

**CAUTION:** Do not crush, puncture, or incinerate the battery pack. Do not open a battery pack, as this damages the pack, makes it unusable, and exposes potentially harmful battery components. There are no field-serviceable parts located inside the battery pack.

#### NOTE:

The Compaq Presario 1800 Series Portable Computers have several screws of various sizes which are **not** interchangeable. Care must be taken during reassembly to ensure that the correct screws are used in their correct location. During removal please keep respective screws with their associated sub-assembly.

### *Removing the Network Interface Card*

To remove the Network Interface Card (NIC), complete the following steps:

1. [Prepare the computer for disassembly.](#)
2. [Remove the palmrest cover with touchpad.](#)
3. [Remove the keyboard.](#)
4. [Remove the heatspreader.](#)
5. Remove two screws from the Network Interface Card, lift the Network Interface Card off the system board and disconnect the cable from the Network Interface Card.

To replace the Network Interface Card, reverse the previous procedures.
