# MAINTENANCE

The following dispenser maintenance should be performed at the intervals indicated:

## DAILY (or as required)

Remove foreign material from vending area drip tray to prevent drain blockage.

## WEEKLY (or as required)

Clean vending area. Check for proper water drainage from the vending area drip tray.

## MONTHLY

Clean and sanitize the hopper interior and beverage system, if applicable (see CLEANING INSTRUCTIONS).

## START-UP & OPERATING INSTRUCTIONS

Fill the hopper with ice. Dispense several large cups of ice (approximately 20 to 30 seconds total dispensing time) to allow ice to fill the cold plate cabinet. Add ice to the hopper as necessary to refill and replace the lid. Allow 10 to 15 minutes for the cold plate to cool down. Repeat this procedure whenever the dispenser has run out of ice. Start up the beverage system and adjust faucets to the proper brix. Contact your local syrup distributor for complete information on the beverage system.

In normal operation, pushing the ice dispenser mechanism will cause ice to flow from the ice chute. Ice flow will continue until the dispenser mechanism is released. Dispensing of any faucet will provide beverage of the appropriate flavor.

**CAUTION: Use caution to avoid spilling ice when filling dispenser. Clean up immediately any spilled ice from filling or operating the unit. To prevent contamination of ice, the lid must be installed on the unit at all times.**

If the dispenser fails to dispense ice or beverage see troubleshooting guide.

## CLEANING INSTRUCTIONS

**WARNING: Disconnect Power Before Cleaning! Do not use metal scrapers, sharp objects or abrasives on the ice storage hopper, top cover and the agitator disk, as damage may result. Do not use solvents or other cleaning agents, as they may attack the plastic material.**

Soap solution - Use a mixture of mild detergent and warm (100 F) potable water.

Sanitizing solution - Use 1/2 ounce of household bleach in 1 gallon of potable water. Preparing the sanitizing solution to this ratio will create a solution of 200 PPM.

# DISPENSER

## 1. CLEANING EXTERIOR SURFACES

**Important:** Perform the following daily.

- A. Remove the cup rest from drip tray.
- B. Wash the drip tray with soap solution. Rinse with clean water and allow solution to run down the drain.
- C. Wash cup rest with soap solution and rinse in clean water. Install the cup rest into the drip tray.
- D. Clean all exterior surfaces with soap solution and rinse in clean water.

## 2. COLD PLATE INSPECTION BEFORE CLEANING

- A. Remove splash panel.
- B. Remove the plastic cold plate cover to expose the cold plate.
- C. Locate and remove any debris from the cold plate, drain trough and make certain that the drain holes are not clogged.
- D. Reinstall the cold plate cover.
- E. Reinstall the splash panel in the reverse order in which it was removed.

## 3. CLEANING INTERIOR SURFACES

**CAUTION:** When pouring liquid into the hopper, do not exceed the rate of 1/2 gallon per minute.

**Important:** Perform the following at least once a month.

- A. Remove agitator assembly.
- B. Using a long handle nylon bristle brush, clean the interior of the hopper, top, cover and cold plate with soap solution. The cold plate can be reached by going through the ice opening on the hopper bottom. Make certain to reach the entire surface of the cold plate including the corners. Clean the agitator assembly with soap solution using a nylon brush or a sponge. Thoroughly rinse the hopper, top cover, agitator and cold plate surfaces with clean potable water.
- C. Remove merchandiser and ice chute cover from dispenser.
- D. With a nylon bristle brush or sponge, clean the inside of the ice chute, gasket and cover with soap solution and rinse thoroughly to remove all traces of detergent.
- E. Re-assemble Agitator assembly. Take special care to ensure that the thumbscrew is tight.
- F. Using a mechanical spray bottle filled with sanitizing solution, spray the entire interior and agitator assembly. Allow to air dry.
- G. Re-assemble ice chute assembly.
- H. Using a mechanical spray bottle filled with sanitizing solution, spray the inside of the ice chute. Allow to air dry.
- I. Reinstall merchandiser.

## BEVERAGE SYSTEM (IF APPLICABLE)

**WARNING: Disconnect Power Before Cleaning! Do not use metal scrapers, sharp objects or abrasives on the ice storage hopper, top cover and the agitator disk, as damage may result. Do not use solvents or other cleaning agents, as they may attack the plastic material.**

Soap solution - Use a mixture of mild detergent and warm (100 F) potable water.

Sanitizing solution - Use 1/2 ounce of household bleach in 1 gallon of potable water. Preparing the sanitizing solution to this ratio, the required solution of 200 PPM will be obtained.

Cleaning tank - Fill clean, empty tank with a mixture of mild detergent and five (5) gallons of warm potable water (120°F).

### 1. DISPENSING VALVES

Refer to addendum supplied with the unit that is applicable to the manufacturer of the valves installed on the unit.

### 2. PRODUCT TUBING

**Only trained and qualified persons should perform these cleaning and sanitizing procedures.**

#### A. Sanitize tank systems, Post-Mix and Pre-Mix

- a. Remove all the quick disconnects from all the tanks. Fill a suitable pail or bucket with soap solution.
- b. Submerge all disconnects (gas and liquid) in the soap solution and then clean them using a nylon bristle brush. (**Do not use a wire brush**). Rinse with clean water.
- c. Prepare sanitizing solution and using a mechanical spray bottle, spray the disconnects. Allow to air dry.
- d. Using a clean, empty tank, prepare five (5) gallons of the sanitizing solution. Rinse the tank disconnects with approximately 9 oz. of the sanitizing solution. Close the tank.
- e. Prepare cleaning tank by filling clean five (5) gallon tank with a mixture of mild detergent and potable water (120°F).
- f. Connect a gas disconnect to the tank and then apply one of the product tubes to the cleaning tank. Operate the appropriate valve until liquid dispensed is free of any syrup.
- g. Disconnect cleaning tank and hook up sanitizing tank to syrup line and CO<sub>2</sub> system.
- h. Energize beverage faucet until chlorine sanitizing solution is dispensed through the faucet. Flush at least two (2) cups of liquid to ensure that the sanitizing solution has filled the entire length of the syrup tubing.
- i. Allow sanitizer to remain in lines for fifteen (15) minutes.
- j. Repeat the step above, applying a different product tube each time until all tubes are filled with the sanitizing solution.
- k. For post-mix valves, remove the nozzle and syrup diffuser and clean them in a mild soap solution. Rinse with clean water and reassemble the nozzle and syrup diffuser to the valve.
- l. For pre-mix valves, disconnect all product tubes from the tank of sanitizing solution and then open the valves to allow the pressure to be relieved. Remove the valves from the dispenser, disassemble and wash thoroughly in a mild soap solution.
- m. Rinse the parts in clean water, reassemble the valve and reconnect it to the dispenser.

- n. Discard the tank of sanitizing solution and reconnect the product (syrup or pre-mix) tanks. Operate the valves until all sanitizer has been flushed from the system and only product (syrup or pre-mix) is flowing.

**B. Sanitize syrup lines, B-I-B Systems**

- a. Remove all the quick disconnects from all the B-I-B containers.
- b. Fill a suitable pail or bucket with soap solution.
- c. Submerge all disconnects (gas and liquid) in the soap solution and then clean them using a nylon bristle brush. **(Do not use a wire brush)**. Rinse with clean water.
- d. Using a plastic pail, prepare approximately five (5) gallons of sanitizing solution.
- e. Rinse the B-I-B disconnects in the sanitizing solution.
- f. Sanitizing fittings must be attached to each B-I-B disconnect. If these fittings are not available, the fittings from empty B-I-B bags can be cut from the bags and used. These fittings open the disconnect so the sanitizing solution can be drawn through the disconnect.
- g. Place all the B-I-B disconnects into the pail of sanitizing solution. Operate all the valves until the sanitizing solution is flowing from the valve. Allow sanitizer to remain in lines for fifteen (15) minutes.
- h. Remove the nozzle and syrup diffuser from each valve and clean them in a soap solution. Rinse with clean water and reassemble the nozzle and syrup diffuser to the valve.
- i. Remove the sanitizing fittings from the B-I-B disconnects and connect the disconnects to the appropriate B-I-B container. Operate the valves until all sanitizer has been flushed from the system and syrup is flowing freely.

# TROUBLESHOOTING

**IMPORTANT:** Only qualified personnel should service internal components or electrical wiring.

**WARNING:** If repairs are to be made to a product system, remove quick disconnects from the applicable product tank, then relieve the system pressure before proceeding. If repairs are to be made to the CO<sub>2</sub> system, stop dispensing, shut off the CO<sub>2</sub> supply, then relieve the system pressure before proceeding. If repairs are to be made to the refrigeration system, make sure electrical power is disconnected from the unit.

Should your unit fail to operate properly, check that there is power to the unit and that the hopper contains ice. If the unit does not dispense, check the following chart under the appropriate symptoms to aid in locating the defect.

Trouble	Probable Cause
BLOWN FUSE OR CIRCUIT BREAKER.	<ul style="list-style-type: none"> <li>A. Short circuit in wiring.</li> <li>B. Defective gate solenoid.</li> <li>C. Defective agitator motor.</li> </ul>
GATE DOES NOT OPEN. AGITATOR DOES NOT TURN.	<ul style="list-style-type: none"> <li>A. No power.</li> <li>B. Bent depressor plate (does not actuate switch).</li> <li>C. Defective dispensing switch.</li> </ul>
GATE DOES NOT OPEN OR IS SLUGGISH. AGITATOR TURNS.	<ul style="list-style-type: none"> <li>A. Defective gate solenoid.</li> <li>B. Excessive pressure against gate slide.</li> <li>C. Defective rectifier.</li> </ul>
ICE DISPENSES CONTINUOUSLY.	<ul style="list-style-type: none"> <li>A. Stuck or bent depressor plate (does not release switch).</li> <li>B. Defective dispensing switch.</li> <li>C. Improper switch installation.</li> </ul>
SLUSHY ICE. WATER IN HOPPER.	<ul style="list-style-type: none"> <li>A. Blocked drain.</li> <li>B. Unit not level.</li> <li>C. Poor ice quality due to water quality or icemaker problems.</li> <li>D. Improper use of flaked ice.</li> </ul>
BEVERAGES DO NOT DISPENSE.	<ul style="list-style-type: none"> <li>A. No 24 volt power to faucets.</li> <li>B. No CO<sub>2</sub> pressure.</li> </ul>
BEVERAGES TOO SWEET.	<ul style="list-style-type: none"> <li>A. Carbonator not working.</li> <li>B. No CO<sub>2</sub> pressure in carbonator.</li> <li>C. Faucet brix requires adjusting.</li> </ul>

Trouble	Probable Cause
BEVERAGES NOT SWEET ENOUGH.	A. Empty syrup tank. B. Faucet brix requires adjusting.
BEVERAGES NOT COLD (UNITS WITH BUILT-IN COLD PLATE).	A. Unit standing with no ice in hopper – no ice in cold plate cabinet.

**Contact your local syrup or beverage equipment distributor for additional information and troubleshooting of beverage system.**

2	53170	Drain Tube
3	51280	Elbow
4	53293	Coupler
5	Contact Factory	Lower Front Panel

## **WARRANTY**

IMI Cornelius Inc. warrants that all equipment and parts are free from defects in material and workmanship under normal use and service. For a copy of the warranty applicable to your Cornelius, Remcor or Wilshire product, in your country, please write, fax or telephone the IMI Cornelius office nearest you. Please provide the equipment model number, serial number and the date of purchase.

Locate your local office on [www.cornelius.com](http://www.cornelius.com) under the contact menu.
