IBM SI/O 11-Port Hub

Legacy migration with today's open system connectivity

The IBM SI/O II Hub enables users of IBM 4680 and 4690 series POS terminals to connect their existing IBM RS-485 peripherals to a standard PC via a single USB connection.

As computer technology changes, the PC can be replaced without affecting retail peripheral connectivity. This allows the user to choose their own computer rather than being locked into a retail specific computer costing more money.

Built-in Power Supply

A wide range AC input 230 watt power supply provides ample power for a full complement of IBM peripherals and devices. This Hub's power supply has been designed to provide enough power to support all attached peripherals.

Compatibility

USB 1.1 compliant.

Support of Windows standby mode operation which controls the power to the attached peripherals.

IBM PC Windows 98SE/2000/XP.

OPOS drivers supported.
