Before using the display, read this manual carefully so that you know how to use the display correctly. Refer to this manual whenever questions or problems about operation arise. Be sure to read and observe the safety precautions.

Keep this manual where the user can see it easily.

\* Installation and removal require special expertise. Consult your product dealer for details.

### **DECLARATION OF CONFORMITY**

according to EN45014

We

Fujitsu General (U.K.) Co. Limited

of

Unit 150, Centennial Park, Centennial Avenue Elstree, Hertfordshire, WD6 3SG

Manufacturer: Shinjyo Fujitsu General Limited 702-3 Kanazawa Shinjyo-shi Yamagata Japan declares under our sole responsibility that the product,

> Type: 50" PLASMA DISPLAY Model Name: PDS5001W

to which this declaration relates are in conformity with the following standards;

European Standards:

EMC: a. EN55022 1994/A1:1995/A2:1997/A3:1998 Class A

- b. EN61000-3-2 1995
- c. EN61000-3-3 1995
- d. EN55024 1998
  (EN61000-4-2 1995 / EN61000-4-3 1996)
  (EN61000-4-4 1995 / EN61000-4-5 1995 / EN61000-4-6 1996)
  (EN61000-4-8 1993 / EN61000-4-11 1994)

Safety: e. EN60065

By conformance with the standard referenced, the product follows the provisions of the directives listed below.

- a. EC Council Directive 89/336/EEC of 3rd, May 1989
- b. EC Council Directive 92/31/EEC of 28th, April 1992
- c. EC Council Directive 93/68/EEC of 22nd, July 1993
- d. EC Council Directive 73/23/EEC of 19th, February 1973

Place of Issue: United Kingdom Date of Issue: Oct. 2001

### FCC NOTICE

#### • PDS5001W/PDS5001U: A Class A digital device

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

• PDS5002W/PDS5002U: A Class B digital device

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

### **IMPORTANT INFORMATION**

**WARNING:** This is a Class A and Class B product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

## **WARNING:** TO REDUCE THE RISK OF FIRE AND ELECTRIC SHOCK, DO NOT EXPOSE THIS PRODUCT TO RAIN OR MOISTURE.

### IMPORTANT

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

CAUTION: TO PREVENT THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

### **IMPORTANT SAFEGUARDS**

Electrical energy can perform many useful functions. This unit has been engineered and manufactured to assure your personal safety. But **IMPROPER USE CAN RESULT IN POTENTIAL ELECTRICAL SHOCK OR FIRE HAZARD**. In order not to defeat the safeguards incorporated into this product, observe the following basic rules for its installation, use and service. Please read these "Important Safeguards" carefully before use.

- All the safety and operating instructions should be read before the product is operated.
- The safety and operating instructions should be retained for future reference.
- All warnings on the product and in the operating instructions should be adhered to.
- All operating instructions should be followed.
- Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
- Do not use attachments not recommended by the product manufacturer as they may cause hazards.
- Do not use this product near water. Do not use immediately after moving from a low temperature to high temperature, as this causes condensation, which may result in fire, electric shock, or other hazards.
- The apparatus shall not be exposed to dripping or splashing.
- No objects filled with liquids, such as vases, shall be placed on the apparatus.

- Do not place this product on an unstable cart, stand, or table. The product may fall, causing serious injury to a child or adult, and serious damage to the product. The product should be mounted according to the manufacturer's instructions, and should use a mount recommended by the manufacturer.
- When the product is used on a cart, care should be taken to avoid quick stops, excessive force, and uneven surfaces which may cause the product and cart to overturn, damaging equipment or causing possible injury to the operator.
- Slots and openings in the cabinet are provided for ventilation. These ensure reliable operation of the product and protect it from overheating. These openings must not be blocked or covered. (The openings should never be blocked by placing the product on bed, sofa, rug, or other similar surface. It should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided and the manufacturer's instructions have been adhered to.)

For proper ventilation, separate the product from other equipment, which may prevent ventilation, and keep distance more than 10 cm.

- This product should be operated only from the type of power source indicated on the label. If you are not sure of the type of power supply of your home, consult your product dealer or local power company.
- This product is equipped with a three-wire plug. This plug will fit only into a grounded power outlet. If you are unable to insert the plug into the outlet, contact your electrician to install the proper outlet. Do not defeat the safety purpose of the grounded plug.
- Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them. Pay
  particular attention to cords at doors, plugs, receptacles, and the point where they exit from the product.
- For added protection for this product during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the cable system. This will prevent damage to the product due to lightning and power line surges.
- Do not overload wall outlets, extension cords, or convenience receptacles on other equipment as this can result in a risk of fire or electric shock.
- Never push objects of any kind into this product through openings as they may touch dangerous voltage points or short out parts that could result in a fire or electric shock. Never spill liquid of any kind on the product.
- Do not attempt to service this product yourself as opening or removing covers may expose you to dangerous voltages and other hazards. Refer all service to qualified service personnel.
- Unplug this product from the wall outlet and refer service to qualified service personnel under the following conditions:
  - a) When the power supply cord or plug is damaged.
  - b) If liquid has been spilled, or objects have fallen on the product.
  - c) If the product has been exposed to rain or water.
  - d) If the product does not operate normally by following the operating instructions. Adjust only those controls that are covered by the Operation Manual, as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to its normal operation.
  - e) If the product has been dropped or damaged in any way.
  - f) When the product exhibits a distinct change in performance—this indicates a need for service.
- When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or with same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards.
- Upon completion of any service or repairs to this product, ask the service technician to perform safety checks to determine that the product is in proper operating condition.
- The product should be placed more than one foot away from heat sources such as radiators, heat registers, stoves, and other products (including amplifiers) that produce heat.
- When connecting other products such as VCR's, and personal computers, you should turn off the power of this product for protection against electric shock.
- Do not place combustibles behind the cooling fan. For example, cloth, paper, matches, aerosol cans or gas lighters that present special hazards when overheated.
- Use only the accessory cord designed for this product to prevent shock.

The power supply voltage rating of this product is AC200–240 V(W type) and AC100–120 V(U type), and the power cord attached conforms to the following power supply voltage. Use only the power cord designated by our dealer to ensure Safety and EMC.

When it is used with other power supply voltage, the power cable must be changed.

Use the standard power plug and cord set of the specified country.

Consult your product dealer.

Power cord

AC 200-240 V

(W type:Included)

(U type:Not included)

AC 240 V (SAATYPE) (Not included)

Power supply voltage: AC 100–125 V (W type:Not included) (U type:Included)

E-3

This display uses a plasma display panel and is only 9.8 cm deep. With its high picture quality and performance, it is perfectly suited for multimedia applications.

### Variety of input signals

- In addition to video, S-video, and RGB, signals, this display supports input of high-quality video signals such as DVD and HDTV.
- The display has an RGB input terminal to receive digital RGB signal of DVI standard to display a high definition picture quality in addition to mD-sub terminal and BNC terminal.
- Depending on the model, the display supports video input for different color television systems as follows: NTSC, PAL, SECAM, PAL60, N-PAL, M-PAL, 4.43NTSC.
- The display has a component video input terminal to receive signals from the DVD player and HDTV equipment as well as digital broadcasting signals (color difference signals).
- The display has an RGB input terminal to receive signals, including VGA, SVGA, XGA, SXGA and UXGA\*1.

### 5 screen sizes (Video input mode) and 3 screen sizes (RGB input mode)

• This display offers a total of five different screen sizes in video input mode: Normal, Wide1, Wide2, Zoom1, and Zoom2.

A Normal mode is also available for displaying of normal-size (4:3 aspect ratio) pictures.

- The display has an Auto mode to switch screen size automatically depending on the contents of software.
- Three different screen sizes in RGB input mode (Normal, Wide, and Zoom) are also available.

### Vertical installation

• The display can be installed vertically, enabling advertisement to be displayed. In this case, you can set up the display so that on-screen information, such as input modes and menus, is displayed properly.

### Power management function

• The display features a DPMS (Display Power Management Signaling) function that ensures automatic power saving capability.

### Flexible as part of a system

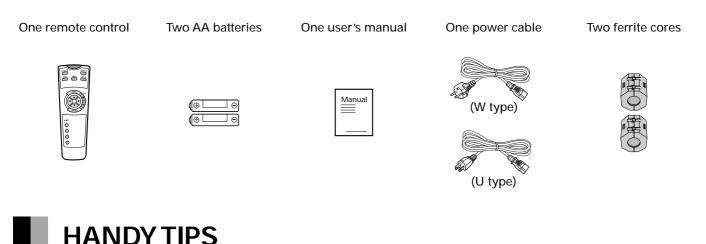

- You can operate the display by remote control using the RS-232C interface.
- If you have two or more displays, you can assign a unique number to each of them so that you can select which one you want to use.
- Input Priority function for selecting automatic switching to desired mode is provided to avoid troublesome operation.
- Main unit key lock function can prevent mischief and malfunction.

### Others

- Troublesome adjustment of clock phase can be avoided by automatic clock phase adjustment function (Automatic Clock Phase function).
- You can specify the color temperature.
- The white screen and screen orbiter functions are available to minimize phosphor burn-in.
- A clear picture can be obtained by digital noise reduction function.
- A display suitable for such film materials as movie pictures can be made by 24 frame mode function.

\*1 The refresh rate of 60, 72, 75 and 85 Hz for SVGA (800 x 600) and those of 60, 70, 75 Hz for XGA (1024 x 768) and those of 60, 75 Hz for SXGA (1280 x 1024) and those of 60 Hz for UXGA (1600 x 1200) are supported. Note that the SXGA and UXGA pictures will be compressed when displayed on the screen.

### **CHECKING ACCESSORIES**

- Pictures may become "burnt" into the screen phosphors if the screen is left on for extended periods. To ensure that the display has a prolonged service life, be sure to use a screen orbiter, white screen. This will ensure the same picture or pattern is not constantly displayed for long periods. (See P. E-33–E-34.)
- The plasma display panel, which is built for maximum precision, provides more than 99.99% effective pixels. You may find, however, that some pixels constantly remain lit or dimmed.
- The display has a fan to prevent its internal temperature from rising.
- Be careful with the air delivered by the fan. It may be very hot.
- Contact your dealer if you find that the display does not seem to function properly when used with other audio-visual equipment.

You may need to move your display if it produces degraded pictures or noise due to electromagnetic radiation, or if the infrared remote control does not function properly.

- Pictures may not be displayed properly if you connect a non-standard PC to the RGB input terminal. In this case, contact your dealer for more information.
- The protective circuit, built into the display, automatically turns off the power if the display has a problem. In this case, you will see that the power indicator lamp flashes red.

#### Warning

If the power indicator lamp flashes red, this signifies that the display has developed a problem. When this happens, be sure to remove the power plug from the receptacle to prevent fire or electric shock. Then, check the display in accordance with the instructions given on P. E-40, or contact your dealer.

- Viewing the screen constantly for extended periods can strain your eyes. Be sure to stay at a proper distance (at least 1.9 m or 6.3 feet) from the screen and to look occasionally away while working.
- Have the display inspected and cleaned by your dealer at regular intervals.

Information

Cables for connecting the display to external equipment are not supplied. Contact your dealer for more information on these products.

To prevent the display's internal components from overheating, make sure that the display is installed in a well-ventilated location.

Be sure to use the optional stand and the other unit when installing the display, furthermore wall-mounting unit is recommended to use for installing on the wall . Also, be also sure that your dealer performs the installation.

See the appropriate instruction manual for more information on the installation hardware you select.

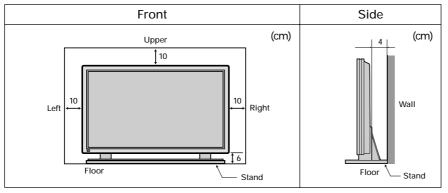

To prevent an accident and ensure safety in the event of an earthquake, fix the display securely into position as described below.

To ensure proper heat radiation, provide at least as much space around the display as shown below.

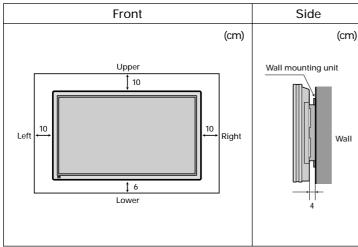

- \* Make sure that the display is installed in a location where the temperature can be maintained between 0°C and 40°C.
- \* Never attempt to tilt the display sideways or backward.
- \* To prevent the power and other cables from being accidentally pulled, make sure that they run along the wall or through corners.

\* The display can be installed with either of its sides facing down.

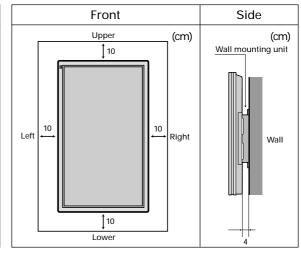

#### When using the stand

### When using the wall-mounting unit (horizontal type)

#### When using the wall-mounting unit (vertical type)

\* When installing the display vertically, setup vertical installation. (Refer to Installation. See P. E-35)

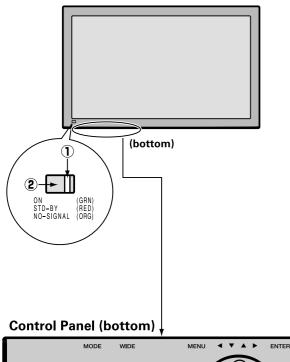

#### Note

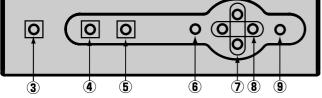

The display is a highly precise piece of equipment and therefore must be packed properly before transportation. Be sure to use only those packing materials originally supplied with the display when repacking it.

#### Reference

See P. E-37 for more information on options.

### Front

#### ① Power indicator lamp

This lamp shows the state of the power supply.

Lit (red):	Power OFF (stand-by)
Lit (green):	Power ON
Lit (orange):	Power saving (DPMS: Power saving function) mode ON
Flashing (red):	Malfunction (Flashes differently depending on the type of malfunction. See P. E-40 for more information.)
② Remote control	signal receiver

Receives signals from the remote control.

③ Power button

Turns the power ON or OFF (stand-by).

(4) Input mode selector button [MODE]

Switches between picture input modes.

**(5)** Wide screen selector button [WIDE]

Switches the screen over to a desired wide screen.

6 Menu button [MENU]

Displays picture adjustment menus.

⑦ Adjustment buttons [▼ / ▲]

The  $[\mathbf{\nabla} / \mathbf{\Delta}]$  buttons can also be used to scroll through the options when a menu is displayed.

⑧ Adjustment buttons [◀ / ▶]

The  $[\blacktriangleleft/\blacktriangleright]$  buttons can also be used to scroll through options in a menu, or to change values.

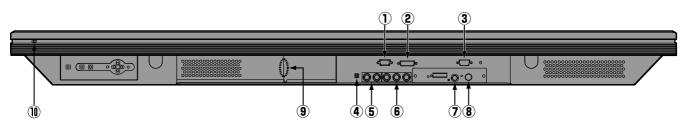

③ Enter button [ENTER]

Press this button to finalize the selection of a desired option in a menu.

### Warning

If the power indicator lamp flashes red, this signifies that the display has developed a problem. When this happens, be sure to remove the power plug from the receptacle and contact your dealer. Leaving the display power ON can result in fire or electric shock.

### Bottom

### ① RGB 2 input terminal (RGB 2 INPUT/mD-sub)

Connect this terminal to the PC's display (analog RGB) output terminal or decoder (digital broadcast tuner, etc.) output terminal.

#### ② RGB 1 input terminal (RGB 1 INPUT/DVI-D)

Connect this terminal to the PC's display (digital RGB) output terminal or decoder (digital broadcast tuner, etc.) output terminal. \*The connection cable No.88741-8000 made by **molex Inc.** is recommanded.

### ③ RS-232C terminal (RS-232C)

This terminal is provided for you to control the display from the PC. Connect it to the RS-232C terminal on the PC.

When connecting a cable, attach a ferrite core to the cable. (See P. E-12.)

### ④ RGB 3 synchronization switch (SYNC SW TTL/ANALOG (75 Ω))

This switch is used to terminate horizontal (H) terminal and vertical (V) terminal, out of RGB3 input terminals, with 75  $\Omega$ .

TTL : Used when sending RGB signals from the PC to the RGB 3 terminal

ANALOG (75  $\Omega$ ): Used when sending analog synchronization signals to the RGB 3 terminal

#### (5)+(6) RGB 3 input terminal (RGB 3 INPUT/BNC)

Connect this terminal to the PC's display (analog RGB)output terminal or decoder (digital broadcast tuner, etc.) output terminal. \*When RGB3 input terminal is connected, Comp.video mode is not available.

#### 6 Component video input terminal (COMPONENT VIDEO INPUT)

Connect this terminal to the component video output (color difference output) terminal of your HDTV unit or DVD player.

\*When Comp.video input terminal is connected, RGB3 mode is not available.

#### ⑦ Video input terminal (VIDEO INPUT)

Connect this terminal to the video output terminal of your VCR or video disk player.

### ⑧ S-video input terminal (S-VIDEO INPUT)

Connect this terminal to the S-video output terminal of your VCR or video disk player.

#### 9 Power input terminal

Connect this terminal to the power cable supplied with the display.

When connecting a cable, attach a ferrite core to the cable. (See P. E-12)

#### 10 OFF/STD-BY () switch

OFF :The power indicator lamp goes off, and the power can't be turned on by the power button. The power is partly supplied.

STD-BY O: The power indicator lamp lights red, and the power can be turned on or off by the power button.

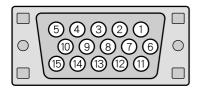

### **Description of Input Terminals**

# PART NAMES AND FUNCTIONS (Continued)

### **Remote Control**

### PUTTING BATTERIES IN THE REMOTE CONTROL

 To remove the cover, slide it outwards while pressing it down.

② Place two AA batteries in the remote control. Make sure that the batteries are properly oriented.

③ Close the cover until it snaps into place.

**CAUTION:** Be sure to use replacement batteries of the same type as the original ones. When disposing of used batteries, please comply with governmental regulations or environmental public institution's rules that apply in your country/area.

### Note

The remote control will not function properly if the batteries are dead. Be sure to replace them as needed.

### PRECAUTIONS

To prevent malfunction, be sure not to apply any form of severe shock to the remote control.

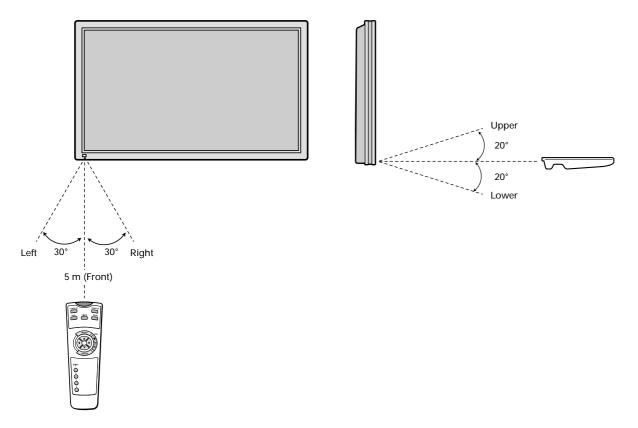

To prevent malfunction or deformation, be sure not to allow the remote control to become wet; also, keep it away from hot locations or heating equipment.

Be sure not to clean the remote control using a cloth dampened in any volatile solvent, such as benzene or thinner.

### EFFECTIVE RANGE FOR THE REMOTE CONTROL

Point the remote control at the display's signal receiver when using it.

Make sure that there are no obstacles between the remote control and the display's signal receiver.

#### Information

The remote control may not function properly if you use a high-frequency fluorescent lamp. If you experience problems, move the lamp or use the remote control from a different position.

Be sure to turn OFF the power to the display and external equipment before making any connections.

No cables are supplied with the display for connection to external equipment. The type of cable to be used varies depending on the PC model. Contact your dealer for more information.

### RECEPTACLE

Make sure that the power cable's grounding wire is grounded.

The display comes with a 3-prong power plug; one prong is connected to the grounding wire. If you have only a 2-hole receptacle, you will need to have it replaced. Contact your dealer for more information.

### CONNECTING THE DISPLAY TO EXTERNAL EQUIPMENT

Carefully check the terminals for position and type before making any connections.

Loose connectors can result in picture or color problems. Make sure that all connectors are securely inserted into their terminals.

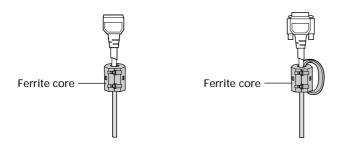

Terminal	Connector
VIDEO INPUT	BNC
S-VIDEO INPUT	S terminal
COMPONENT VIDEO INPUT	BNC x 3
RGB INPUT	mD-sub 15-pin , BNC x 5 , DVI-D
RS-232C	D-sub 9-pin

### Ferrite cores

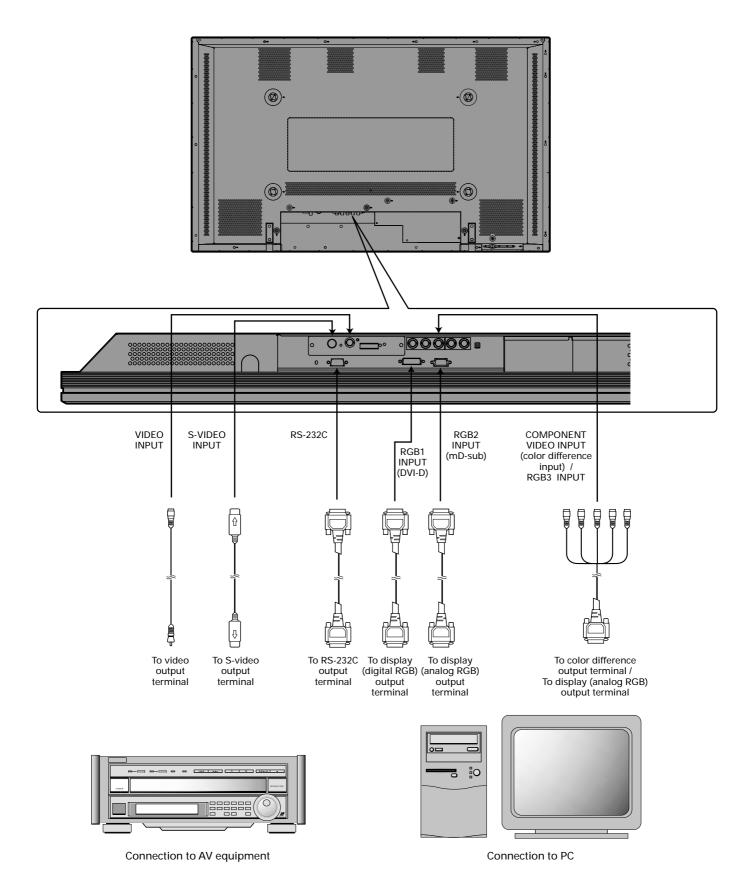

These ferrite cores are used to attenuate undesired signals.

#### Two ferrite cores

When connecting a cable to the power input terminal, RS-232C terminal, attach one of these ferrite cores to the cable near the terminal.

### TURNING ON THE POWER

\* You can also use the switches on the display's control panel to accomplish these steps.

### TURNING OFF THE POWER

Select the OFF/STD-BY  $\bigcirc$  switch at the STD-BY  $\bigcirc$  of the display. When you do so, the power indicator lamp turns

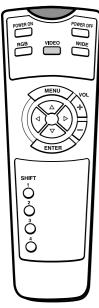

When you do so, the power indicator lamp turns

Press POWER ON on the remote

Press Break or Control to select a desired input mode.

The power indicator lamp turns red.

### VIDEO INPUT MODE

\* You can also use the switches on the display's control panel to accomplish these steps.

## Press To select a desired input mode.

Each time you press , a different input mode appears. The sequence is as follows:

└→Video → S-video → Comp.video ๅ

- Video: Displays pictures from equipment connected to the Video terminal. Displays pictures from equipment S-video:
- Comp.video: Displays pictures from equipment connected to the component video input terminal.

connected to the S-video terminal.

- \* You can switch between video input modes while you are in RGB input mode.
- \* When Comp.video input terminal is connected, RGB3 mode is not available. Setting is made in BNC Input mode. (See P. E-31.)

# Press bilder to select a desired picture mode.

Each time you press  $\stackrel{\text{where}}{\longrightarrow}$ , a different picture mode appears. The sequences used are as follows:

When you are in a Video or S-video input mode

→Normal→Auto→Wide1→Wide2 → Zoom2 ← Zoom1 ←

When you are in a Comp.video input mode

→Normal →Wide1→Wide2 -Zoom2 ← Zoom1 ←

When you are in an RGB input mode →Normal→Wide → Zoom ¬

\* Depending on the type of signal, some aspects may not be selected.

Normal

Normal mode

Widel

Wide1 mode

#### Note

• Displaying a picture in a Normal mode for extended periods of time may cause phosphor burn-in.

- A variety of picture modes are available with this display. Remember that if you select a mode with an aspect ratio (ratio of frame width to frame height) different from that of the TV program or video media, the pictures will appear differently than if you had selected a mode having the same aspect ratio.
- Showing a movie or similar premium event at a different aspect ratio from its original one at any event site, restaurant, or bar for profit-making purposes or for a public audience may constitute a copyright infringement.

For films, try to select a mode having the same aspect ratio as the original picture; this enables the director's original intentions to be preserved.

#### Reference

See P. E-26-E-27 for how to adjust the picture size and position.

### SCREEN SIZE

### Normal

Displays pictures of normal size (i.e., a 4:3 aspect ratio).

### Auto

The screen size changes automatically in accordance with the contents of image software you use.

### Wide1

Displays natural-looking pictures of standard size on the wide screen.

### Wide2/Wide

Ideal for displaying vertically extended pictures such as squeezed pictures and recorded HDTV programs.

### Zoom1/Zoom

Enlarges horizontally extended pictures equally in all directions to maintain the aspect ratio constant.

### Zoom2

Reduces the height of horizontally extended pictures with captions, without eliminating the caption. Only the height of pictures is reduced, not the height of the caption.

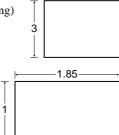

(Captions may not be easy to read, however, depending on the picture.)

### ASPECT RATIO

The following aspect ratios are available.

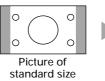

4:3 aspect ratio (VHF/UHF broadcasting, BS broadcasting)

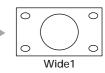

1.85:1 aspect ratio (Vista Vision size)

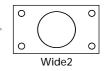

16:9 aspect ratio (HDTV broadcasting)

2.35:1 aspect ratio (Cinema Vision size)

#### Information

You may find dark areas on top and at the bottom of the screen if you select one of the Zoom modes for media while using the Vista Vision or Cinema Vision size i.e., the sizes used frequently for picture software.

### SELECTING OPTIONS IN A MENU

Use the [MODE] button on the display or and and on the remote control to select a desired input mode.

A total of four different menus (PICTURE, POSITION/SIZE, FEATURES, FACTORY DEFAULT) are available.

You can easily distinguish between these menus as shown below.

1
PICTURE

\* Press 🗿 , 😰 , 👁 or 🇆 to make adjustment/setup, and press 🍋 to store.

\* Do not change input signals when any of the menus are displayed.

### **USING THE PICTURE MENU**

When you finish selecting a desired option in the PICTURE menu screen, press (1997).

At this time, the adjustment/setup screen for that option will appear.

You can use to change the value for the option. Press to store. (See P. E-24–E-25.)

Changes you make will be stored only for the selected mode.

#### · Minimizing phosphor burn-in (Screen Orbiter)

You can use this option to move the screen position to minimize phosphor-induced "burn-in".

Follow the steps below.

(1) Select "Screen Orbiter" and press (1)

The "Screen Orbiter" setting screen will appear.

- (2) Press  $\bigcirc$  or  $\bigotimes$  to select "Mode/Time".
- (3) Select a desired pattern.

Each time you press  $\bigcirc$  or  $\bigcirc$ , one of the available choices appears in the following sequence:

└ > Off ←> Time ←> Mode ←

Off:Disables Screen Orbiter.

Time: Moves the pattern approximately every one hour.

Mode: Moves the pattern when the power is turned ON or when you switch between modes.

(4) Press 👁 or 👁 to select "Moving Area".

(5) Press  $\bigcirc$  or  $\bigcirc$  to select the range for moving the pattern.

Each time you press (s) or (s), one of the available choices appears in the following sequence:

⊢→ Min. ↔→ Std. ↔ Max.∢

Min.: Pattern moves in small range. (About 5 pixels)

Std.: Pattern moves in moderate range. (About 10 pixels)

Max.: Pattern moves in wide range. (About 15 pixels)

(6) Press **ENTER** to store.

\* When the Screen Orbiter function is operated in RGB1 mode, some letters at the top, bottom, right or left of the screen may be missed.

#### Using screen protection functions (examples)

The screen protection functions minimize phosphor burn-in but cannot completely eliminate it.

When using the display occasionally	When using the display continuously
• Select a desired amount of time for "DPMS". Thus, when the display does not receive a signal, it will automatically display white or black over the entire screen. When the predetermined time elapses, the power will turn OFF.	<ul> <li>When switching between RGB and video input modes only occasionally <ol> <li>Select "Time" for "Mode/Time" with "Screen Orbiter".</li> <li>Select a desired range for "Moving Area" with "Screen Orbiter". This causes the screen saver pattern to move in the same range at regular intervals.</li> </ol> </li> <li>When switching between RGB and video input modes frequently <ol> <li>Select "Mode" for "Mode/Time" with "Screen Orbiter".</li> <li>Select a desired range for "Moving Area" with "Screen Orbiter".</li> </ol> </li> </ul>

#### Input mode of priority (Input Priority)

#### All modes

You can use this option to switch between modes only when a signal is received through the selected input mode terminal. You cannot switch the input mode.

Each time you press (s) or (s), one of the available choices appears in the following sequence:

#### 

Off: Switches between modes normally.

Other modes: Displays pictures when a signal is received through the selected input mode terminal.

#### Press **ENTER** to store.

\*RGB1 mode cannot be selected.

\* On-screen information disappears if you do not take any action for about 60 seconds.

\* The following abbreviations used in this document represent input modes in which you can make adjustments:

☑: Video mode, S: S-video mode, C: Comp.video mode, R: RGB mode

# **OTHER ADJUSTMENTS (FEATURES MENU)(Continued)**

Assigning Numbers to Displays (Monitor No.)     All mo	odes	
When you use two or more displays, you can use a single remote control to control individual displays by assigning a unique number to each of the displays.		
Each time you press (a) or (a), one of the available numbers appears in the following sequence: $0 \leftrightarrow 1 \leftrightarrow 2 \leftrightarrow 3 \leftrightarrow 4 \leftarrow 1$		
0: You can normally control displays.		
You cannot control displays if you press any of [SHIFT 1] through [SHIFT 4].		
<ul><li>1–4: Allows you to control a desired display by pressing the corresponding button (one of [SHIFT 1] through [SHIFT 4]).</li></ul>		
When you do not press any of the SHIFT buttons, you can control all displays.		
Press <b>ENTER</b> to store.		
* You can check the "Monitor No." on the Information screen. (See P. E-35.)		
Setting RGB Input Signal Compulsorily (Direct Setting)	R	
You can use this option to switch the setting for RGB input signal.		
Each time you press 🚯 or 🧔, one of the available choices appears in the		
following sequence:		
For RGB1 mode:		
→Auto <>VGA <> WVGA <> XGA <> WXGA <		
For RGB2.3 mode:		
<b>~</b> Auto <b>~~</b> VGA <b>~~</b> WVGA <b>~~</b> 480P <b>~~</b> XGA <b>~~</b> WXGA <b>~~</b> SXGA <b>~~</b> SXG	A+∢_	
Auto: The optimum display is obtained automatically for input signals.		
Others: The optimum resolution setting is fixed for each signal.		
Press to store.		
* In Auto mode, the resolution of VGA, WVGA, 480P, XGA, WXGA, SXGA and SXGA <sup>+</sup> may automatically distinguished. Switch to the fixed display when the image is not displayed prop		
Specifying RGB Input Signal (Code Setting)	R	
You can use this option to specify and display the type of RGB input signal by code number.		
Each time you press $\mathbf{x}$ or $\mathbf{x}$ , one of the available choices appears in the following		

sequence:

Auto 🔶 Manual

Auto: Automatically displays the input signal to the optimum.

Manual: Selects RGB code number.

#### Press **ENTER** to store.

\* In Auto mode, the optimum resolution may not be set up automatically depending on the type of signal.

Select the type of signal when the image is not displayed properly.

However, note that when the type of signal is selected directly, the signal of other resolution may not be displayed properly.

#### • Displaying white over entire screen (White Screen)

#### You can use this option to display white over the entire screen to minimize phosphor burn-in.

Each time you press ( or ( ), one of the available choices appears in the following sequence:

- On ← → Off
- Off: Does not display white.
- On: Displays a white screen immediately.

Press **ENTER** to store.

VSCR

### BASIC OPERATION [EX.: RESTORING THE VALUES OF THE ADJUSTMENT/SETTING TO FACTORY SETTINGS]

You can restore the values of the adjustment/setting made in the MENU to factory settings.

\* You can also use the switches on the display's control panel to accomplish these steps.

Wall-mounting unit	Horizontal: 0° to 15° mounting angle	P-50WB01	
(for horizontal)			
Hanging unit	$0^{\circ}$ to $15^{\circ}$ mounting angle (variable)	P-50CT01	
	The pipe is not supplied with the ceiling- hanging unit, so consult your produce dealer.		
Stand		P-50TT01	

\* When installing an option, make sure that all installation requirements for that option (as given in the relevant instruction manual) are met.

\* The colors of options do not match the display colors perfectly.

### Warning

To prevent injury, fire, and electric shock, arrange for options to be initially installed (or installed at a different location) by your dealer.

**CAUTION:** This display (PDS5001W/PDS5001U/PDS5002W/PDS5002U) is for use only with Fujitsu General Limited's option (P-50WB01, P-50CT01, P-50TT01). Using this display with other option can cause instability resulting in possible injury.

This display can store the latest four types of signals for RGB adjustment value. The fifth input signal will replace the adjustment value of the first input signal.

To do this, select a desired signal and follow the instructions in "Adjusting Screen Position and Size" on P. E-26–E-27 to adjust the parameters. When you finish, the settings will be automatically stored. Thus, when the display receives that signal, pictures will be displayed in accordance with the settings you most recently selected.

#### Main corresponding signals (RGB mode)

Display (dots x lines)	Horizontal frequency (kHz)	Vertical frequency (Hz)	Signal
852 x 480	31.72	59.97	
640 x 480	31.47	59.94	VGA
640 x 480	37.86	72.81	VGA 72 Hz
640 x 480	37.50	75.00	VGA 75 Hz
640 x 480	43.27	85.01	VGA 85 Hz
720 x 400	31.47	70.09	400 lines
800 x 600	37.88	60.32	SVGA 60 Hz
800 x 600	48.08	72.19	SVGA 72 Hz
800 x 600	46.88	75.00	SVGA 75 Hz
800 x 600	53.67	85.06	SVGA 85 Hz
1024 x 768	48.36	60.00	XGA 60 Hz
1024 x 768	56.48	70.07	XGA 70 Hz
1024 x 768	60.02	75.03	XGA 75 Hz
1280 x 1024	63.98	60.02	SXGA 60 Hz
1280 x 1024	79.98	75.03	SXGA 75 Hz
1600 x 1200	75.00	60.00	UXGA 60 Hz
640 x 480	35.00	66.67	MAC 13RGB
848 x 480	31.02	60.00	
720 x 485	15.73	59.94	60 fields
720 x 575	15.63	50.00	50 fields
640 x 400	31.50	70.15	NEC 31 kHz

\* With some input signals, "Out of range" may appear even when the horizontal and vertical frequencies are within their permissible ranges. Make sure that the vertical frequency of the input signal is 85 Hz or less for SVGA, 75 Hz or less for XVGA/ SXGA , 60 Hz or less for UXGA.

In the Comp.video and Video/S-video modes, the display has been factory-set as follows for different input signals:

Main corresponding signals (Comp.video mode)

Horizontal frequency (kHz)	Vertical frequency (Hz)	Signal
15.73	59.94	SDTV 480I
15.63	50.00	SDTV 576I
31.47	59.94	SDTV 480P
31.25	50.00	SDTV 576P
45.00	60.00	HDTV 720P
37.50	50.00	HDTV 720P
33.75	60.00	HDTV 1080I
28.13	50.00	HDTV 1080I

Main corresponding signals (Video, S-video mode)

Horizontal frequency (kHz)	Vertical frequency (Hz)	Signal
15.73	59.94	NTSC
15.63	50.00	PAL
15.63	50.00	SECAM
15.63	59.52	PAL60
15.63	50.00	N-PAL
15.73	59.95	M-PAL
15.73	59.94	4.43NTSC

• With the 1280 x 1024 and 1600 x 1200 modes, pictures of reduced size are displayed on the screen, using size reduction and interpolation. Note also that on-screen information is also displayed in reduced size.

• "Out of range" appears if the display receives a signal whose characteristic does not fall within the display's permissible range.

• You can check input signals through "Information" on the FEATURES Menu screen. (See P. E-35.)

### Precautions

Be sure to remove the power plug from the receptacle before cleaning the display.

Be sure not to clean the display using a cloth dampened with volatile solvents, such as benzene or thinner. Such solvents can harm the display's cabinet, the filter at the screen front, and the remote control. They can also cause paint to come off these sections.

### **Cleaning the Screen**

Clean the screen gently with a soft cloth. The screen surface is fragile. Never attempt to clean it with a hard material, press on it forcefully, or tap it.

### **Cleaning the Cabinet and Remote Control**

Use a soft cloth for cleaning.

If the cabinet or remote control is heavily stained, soak a soft cloth in a mixture of water and detergent and squeeze it dry before wiping off the stains. Use a soft, dry cloth for final cleaning.

### Cleaning the ventilation grille

Remove dust from the ventilation grille in the rear of the main unit periodically with a vacuum cleaner as the accumulated dust can increase the internal temperature of the main unit causing machine failure or fire hazard.

### **HANDY TIPS**

In the event of problems with the display, check the following explanations before contacting your dealer for servicing.

Problem	Action
• Power does not turn ON.	• Check whether the power plug is securely inserted into the receptacle.
• No pictures are displayed.	<ul> <li>Check cables for disconnection.</li> <li>Check whether the power for all input equipment is ON.</li> <li>Check for connection to wrong terminals or for wrong input mode.</li> <li>Check whether the input mode display is colored pink.Special setup may have been made. Return to original setup or initialize the User adjustment value.</li> </ul>
Remote control does not function properly.	<ul> <li>Check for incorrect battery orientation.</li> <li>Check for dead batteries.</li> <li>Checkfor distance from the display.</li> <li>Check whether you are pointing the remote control transmitter properly at the display's receiver.</li> <li>Check for any obstacle between the remote control and the display.</li> </ul>
• The display makes a snapping sound.	• This sound is produced when the cabinet expands or contracts due to variations in temperature. This sound does not indicate that the display has a problem.
• The display makes a buzzing sound.	• The display has fans to maintain the temperature of internal components at a constant level. This sound is produced by the fan as it rotates.
• There are spots on the screen.	• Check whether your AV equipment is affected by interference from automobiles, trains, high-voltage transmission lines, neon signs or other potential sources of interference.
Degraded colors/tints	• Check whether all picture adjustments have been properly made. (See "Adjusting Pictures" on P. E-24–E-25.)
Improper screen position/size	• Check whether screen position and size have been properly adjusted. (See "Adjusting Screen Position and Size" on P. E-26–E-27.)
• If "Invalid operation" appears.	• Check whether you have selected "Input Priority".(See "Features" on P. E-33.)
• If "Out of range" appears, the display is receiving a signal whose picture or signal cannot be reproduced by the display.	• Input proper signals. Make sure that the vertical frequency of the input signal is 85 Hz or less for SVGA, 75 Hz or less for XVGA / SXGA , 60 Hz or less for UXGA.
• The screen turns to black and white.	• Input proper signals. Make sure that the vertical frequency of the input signal is 85 Hz or less for SVGA, 75 Hz or less for XVGA / SXGA , 60 Hz or less for UXGA.
• If "Error message Condition 1" appears, the fan is defective.	• Remove the power plug from the receptacle, and contact your dealer for repairs.
• If "Error message Condition 2" appears, the display's internal components are extremely hot.	• Remove the power plug from the receptacle. (You can turn the power back ON again when the components have cooled sufficiently.) If the message appears again when you turn the power back on, remove the power plug from the receptacle, and contact your dealer for a repairs.
• If "Change refresh rate to 60Hz"appears,	• The picture may get blurred with vertical frequency of other than 48.3-51.8 or 58.4-61.4 (Hz). Change the setting of your PC,etc.
• If the power indicator lamp flashes red.	<ul> <li>Remove the power plug from the receptacle, and inform your dealer about how the lamp flashed.</li> <li>As explained below, the power indicator lamp flashes differently depending on the type of problem: <ul> <li>Flashes repeatedly: Improper supply voltage level</li> <li>Flashes once: Malfunction by the fan</li> <li>Flashes twice: Excessive temperature</li> <li>Flashes three times or more: Other problems</li> </ul> </li> </ul>
