# P Series BIOS BIOS SETUP UTILITY

The BIOS Setup Utility is a program that sets up the operating environment for your notebook. Your BIOS is set at the factory for normal operating conditions, therefore there is no need to set or change the BIOS environment to operate your notebook.

The BIOS Setup Utility configures:

- Device control feature parameters, such as changing I/O addresses and boot devices.
- System Data Security feature parameters, such as passwords.

#### **Entering the BIOS Setup Utility**

To enter the BIOS Setup Utility do the following:

- 1. Turn on or restart your notebook.
- 2. Press the [F2] key once the Fujitsu logo appears on the screen. This will open the main menu of the BIOS Setup Utility with the current settings displayed.
- Press the [RIGHT ARROW] or [LEFT ARROW] key to scroll through the other setup menus to review or alter the current settings.

#### Navigating Through The Setup Utility

The BIOS setup utility consists of seven menus; Main, Advanced, Security, Power, Boot, Info and Exit. This document explains each menu, including all submenus and setup items.

The following procedures allow you to navigate the setup utility menus:

- 1. To select a menu, use the cursor keys: [-], [-].
- To select a field within a menu or a submenu, use the cursor keys: [↓], [↓].

## POINTS

- Selecting a field causes a help message about that field to be displayed on the right-hand side of the screen.
- Pressing the Enter key with the highlight on a selection that is not a submenu or auto selection will cause a list of all options for that item to be displayed. Pressing the Enter key again will select the highlighted choice.

- To select the different values for each field, press the [Spacebar] or [+] to change to the next higher selection and [F5] or [-] to go to the next lower selection.
- 4. To activate a submenu press [Enter].
- 5. To return to a menu from a submenu, press [Esc].
- 6. To go to Exit menu from another menu, press [Esc].
- 7. Pressing the [F9] key resets all items in the BIOS to the default values.
- 8. Pressing the [F10] key saves the current configuration and exits the BIOS Setup Utility. You will be asked to verify this selection before it is executed.
- 9. Pressing the [F1] key gives you a general help screen.

#### Entering the Setup Utility After a Configuration Change or System Failure

If there has been a change in system configuration that does not match the parameter settings stored in your BIOS memory, or there is a failure in the system, the system beeps and/or displays an error message after the Power On Self Test (POST). If the failure is not severe, it will give you the opportunity to modify the settings of the setup utility, as described in the following steps:

1. When you turn on or restart the computer there is a beep and/or the following message appears on the screen:

Error message - please run SETUP program Press <F1> key to continue, <F2> to run SETUP

2. If an error message is displayed on the screen, and you want to continue with the boot process and start the operating system anyway, press the [F1] key.

## ΡΟΙΝΤS

If your settings require it, you may be asked for a password before the operating system will be loaded.

- 3. If an error message is displayed on the screen, and you want to enter the setup utility, press the [F2] key.
- 4. When the setup utility starts with a fault present, the system displays the following message:

Warning! Error message [Continue]

Press any key to enter the setup utility. The system will then display the Main Menu with current parameters values.

# MAIN MENU – SETTING STANDARD SYSTEM PARAMETERS

The Main Menu allows you to set or view the current system parameters. Follow the instructions for Navigating Through the Setup Utility to make any changes.

The following tables show the names of the menu fields for the Main menu and its submenus, all of the options for each field, the default settings and a description of the field's function and any special information needed to help understand the field's use.

## ΡΟΙΝΤ

System Time and System Date can also be set from your operating system without using the setup utility. Use the calendar and time icon on your Windows Control Panel.

#### Exiting from Main Menu

When you have finished setting the parameters on this menu, you can either exit from the setup utility, or move to another menu. If you wish to exit from the setup utility, press the [Esc] key or use the cursor keys to go to the Exit menu. If you wish to move to another menu, use the cursor keys.

#### Advanced Menu

# **ADVANCED MENU – SETTING DEVICE FEATURE CONTROLS**

The Advanced Menu allows you to:

- Enable or disable support for Plug & Play operating systems.
- Select between the display panel and an external CRT display.
- Enable or disable compensation for your display.
- Configure PCI devices in your system.
- Configure CPU and USB features.

Follow the instructions for Navigating Through the Setup Utility to make any changes.

The following tables show the names of the menu fields for the Advanced Menu and its submenus, all of the options for each field, the default settings and a description of the field's function and any special information needed to help understand the field's use.

# SECURITY MENU – SETTING THE SECURITY FEATURES

The Security menu allows you to set up the data security features of your notebook to fit your operating needs and to view the current data security configuration. Follow the instructions for Navigating Through the Setup Utility to make any changes.

The following tables show the names of the menu fields for the Security menu and its submenus, all the options for each field, the default settings and a description of the field's function and any special information needed to help understand the field's use. The default condition is no passwords required and no write protection.

# POINT

If you set a password, write it down and keep it in a safe place. If you forget the password you will have to contact your support representative to regain access to your secured functions and data.

# POINTS

- If you make an error when re-entering the password a [Warning] will be displayed on the screen. To try again, press the **Enter** key and then retype the password. Press the **Esc** key to abort the password setting process.
- Entering a password incorrectly three times in a row will cause the keyboard and mouse to be locked out and the warning [System Disabled] to be displayed. If this happens, restart the computer by turning off and on the power with the power switch and use the correct password on reboot.
- If the Password on Resume is Enabled and the Password on Boot is Disabled you will not have to type your password upon resuming the system from the Suspend or Save-to-Disk modes. Power Management Security will work only if Password on Boot is enabled.

When a User Password is set it must be used to access the BIOS utility.	
Minimum User Password Length:		[0]	—	
Password on Boot:	<ul><li>Disabled</li><li>First Boot</li><li>Every Boot</li></ul>	[Disabled]	When set to Disabled, no password is required. When set to First Boot, password entry required only before first boot. When Every Boot is selected, password required whenever the system is booted.	
Password On Resume:	<ul><li>Disabled</li><li>Enabled</li></ul>	[Disabled]	When Enabled, PS/2 keyboard or mouse inputs are locked out at Resume From Suspend or Save-to-Disk until entering password.	
Boot from Removable Media:	<ul> <li>All</li> <li>Supervisor only</li> </ul>	[All]	When Supervisor Only is selected, only the Supervisor can boot from removable media. Only the user who enters the Supervisor Password before OS boot is treated as the Supervisor. When All is selected, boot from removable media is not restricted.	
Floppy Disk Access:	<ul> <li>All</li> <li>Supervisor only</li> </ul>	[All]	When Supervisor Only is selected, only the Supervisor can access the floppy disk. Only the user who enters the Supervisor Password before OS boot is treated as the Supervisor. When All is selected, floppy disk access is not restricted.	
Hard Disk Security:		_	Configures hard disk security features.	
Owner Information:			Sets Owner information.	
Hard Disk Boot Sector:	<ul> <li>Normal</li> <li>Write Protected</li> </ul>	[Normal]	Sets protection mode for hard disk drive.	

#### Exiting from the Security Menu

When you have finished setting the parameters on the Security Menu, you can either exit from setup utility or move to another menu. If you wish to exit from setup utility, press the [Esc] key to go to the Exit Menu. If you wish to move to another menu, use the cursor keys.

	E	Boot
Ouick Boot:	Enabled	Item Specific Help
Boot Time Diagnostic Screen:	[Disabled]	
Preboot Execution Environment Boot Device Priority	[Disabled]	[Disabled] All diagnostic tests will be done.
		[Enabled] Some diagnostic tests may be skipped while booting to speed up.
		[Auto] Diagnostic tests will be automatically skipped or done according to the order of the ACPI OS.
F1 Help ↑↓ Select Item -/Space C ESC Exit ↔ Select Menu Enter S	Change Values Select ► Sub-Menu	

Figure 17. Boot Menu

Table 17: Fields, Options and Defaults for the Boot Menu

Menu Field	Options	Default	Description
QuickBoot Mode:	<ul><li>Disabled</li><li>Enabled</li><li>Auto</li></ul>	[Enabled]	Turns on and off booting with a truncated set of Power On Self Test. (Fewer tests mean faster turn on.)
Boot-time Diagnostic Screen:	<ul><li>Disabled</li><li>Enabled</li></ul>	[Disabled]	Turns on and off display of test results instead of Fujitsu logo screen during Power On Self Test.
Preboot Execution Environment	<ul><li>Disabled</li><li>Enabled</li></ul>	[Disabled]	Turns off and on the preboot execution environment feature.
Boot Device Priority	<ul> <li>Selects Boot Device Priority submenu</li> </ul>		This menu allows setting up the source for the operating system.

#### Boot Device Priority Submenu of the Boot Menu

The Boot Device Priority submenu is for setting the order of checking of sources for the operating system.

PhoenixBIOS Setup Utility	
1	Boot
Boot Device Priority	Item Specific Help
Floppy Disk Drive +Hard Disk Drive ATAPI CD-ROM Drive	The top device has the highest priority. <enter> expands or collapses devices with a + or <ctrl+enter> expands all. <f> or <l> selects a device. &lt;+&gt;/<space> or &lt;-&gt; moves the device up or down. <shift +="" 1=""> enables or disables a device.</shift></space></l></f></ctrl+enter></enter>
F1 Help ↑↓ Select Item -/Space Change Values ESC Exit ↔ Select Menu Enter Select ► Sub-Men	-

Figure 18. Boot Device Priority Submenu

Table 18: Fields,	Options and Defaults for the Boot Device Priority Submenu of the Boot Menu
-------------------	--

Menu Field	Options	Description
Floppy Disk Drive	_	The boot selections determine the order in which the BIOS searches for the operating system during a startup sequence. To change the order highlight one source by using the [ <b>up</b> ] or
Hard Disk Drive		[down] cursor keys and then press the [+] or [-] key to change the order number for that source. Be sure to save your changed
ATAPI CD-ROM Drive		order when you exit the BIOS setup utility.

#### Exiting from Boot Menu

When you have finished setting the boot parameters with the Boot menu, you can either exit from the setup utility or move to another menu. If you wish to exit from the setup utility press the [Esc] key to go to the Exit menu. If you wish to move to another menu, use the cursor keys.

# **INFO MENU - DISPLAYS BASIC SYSTEM INFORMATION**

The Info menu is a display-only screen that provides the configuration information for your notebook.

The following table shows the names of the menu fields for the Info menu and the information displayed in those fields. These fields are for information purposes only, and are not editable.

The information displayed on this screen is variable according to the unit you purchased.

PhoenixBIOS Setup Utility

Figure 20. Exit Menu

#### Table 20: Fields, Options and Defaults for the Exit Menu

Menu Field	Shortcut	Description
Exit Saving Changes	Press the F10 key	Exit Saving Changes and Exit will store all the entries on every menu of the setup utility to the BIOS memory and then exit the setup utility. A confirmation message Save Configuration changes and exit now? [Yes] [No] will be displayed.
Exit Discarding Changes		Selecting Exit Discarding Changes and Exit will exit the setup utility with out writing to the BIOS memory. When the BIOS recognizes this selection it will load the operating system and begin operation.
Load Setup Defaults	Press the F9 key	Selecting Load Setup Defaults will load the factory preset default values for all menu fields, then display the message Load default configuration now? [Yes] [No]. When confirmed the setup utility will return to the Exit Menu. To return to another menu follow the directions in the Navigating Through The Setup Utility section.
Discard Changes		Selecting Discard Changes will load the previous values in BIOS memory for all menu fields. The message Load previous now? [Yes] [No] will be displayed. When confirmed the setup utility will return to the Exit menu. To return to another menu, follow the directions in the Navigating Through The Setup Utility section.

### Menu Field Shortcut Description Save Changes -- Selecting Save Changes will cause the new settings in all menus to be written to the BIOS memory. The message Save configuration changes now? [Yes] [No] will be displayed. When confirmed, the setup utility will return to the Exit menu. To return to another menu, follow the directions in the Navigating Through The Setup Utility section.
