

FURUNO®

23" High resolution Multi-color LCD

MARINE RADAR

WITH ARPA AND AIS DISPLAY

Models **FAR-2817/2827/2837S**

- Advanced signal processing for improved detection in rough sea
- LCD display providing crisp radar images
- Designed to comply with SOLAS carriage requirements for all ships
- Up to four radars can be interswitched in the network without an extra device
- Automatic plotting/tracking of 100 targets manually or automatically acquired
- Easy operation by customizable function keys, trackball/wheel palm module and rotary controls
- Low spurious magnetrons meeting ITU-R unwanted emission standards
- Displays 1000 AIS equipped targets

The future today with FURUNO's electronics technology.

Full-keyboard Control Unit

The control head has logically arranged controls in a combination of push keys and trackball. Well organized menu ensures that all operations can be done by trackball.

Palm Control Unit

Alternative to the Full-keyboard Control Unit or additional as a remote operation.

The revolutionary FAR-28x7 series of X- and S-band radars are the result of FURUNO's 50 years of experience in marine electronics and advanced computer technology. This series is designed to meet the exacting standards of the International Maritime Organization (IMO) for all ships.

The display unit employs a 23.1" LCD which provides an effective picture diameter of larger than 340 mm. The SXGA monitor provides crisp radar images, which are presented in a selectable color with a day and night background color for easy observation in all lighting conditions. Different colors are assigned for marks, symbols and texts for user-friendly operations.

Target detection is enhanced by sophisticated signal processing techniques. Two guard zones can be set at required ranges in any sector. Other ship's movements are assessed by advanced target tracking software and alerted by CPA/TCPA data readouts.

The FAR-28x7 series can display AIS-equipped ships, when connected with an AIS transponder.

The radar antenna is available with 4, 6.5, or 8 feet radiator. For the X-band, the rotation speed is selectable from 24 rpm for standard radars or 42 rpm for HSC. The S-band radar is also available with the antenna radiator of 10 or 12 feet. The S-band radar assures target detection in adverse weather where an X-band is heavily affected by sea or rain clutter.

This series of radar comply with the following IMO and IEC regulation:

- IEC 60936-1 shipborne radar
- IEC 60936-2 HSC radar
- IEC 60872-1 ARPA
- IEC 60872-2 ATA
- IEC 601993-2 AIS
- IEC 60945 General requirements
- IEC 61162-1 ed 2
- IMO MSC.64(67) Annex 4
- IMO A.823(19)
- IMO MSC.74(69) Annex 3

100 Base-TX Ethernet Network System

The radars can be connected to an Ethernet network for a variety of user requirements. SOLAS Chapter V as amended requires X- and S-band radars for ships 3000 GT and over. Each of X- and S-band radars can be interswitched without using an extra option. Up to four radars can be interchanged in the network. In addition, the essential navigational information including the electronic chart, L/L, COG, SOG, STW, etc. can be shared in the network.

AIS Information

Targets automatically acquired AIS-equipped target selected for data reading.

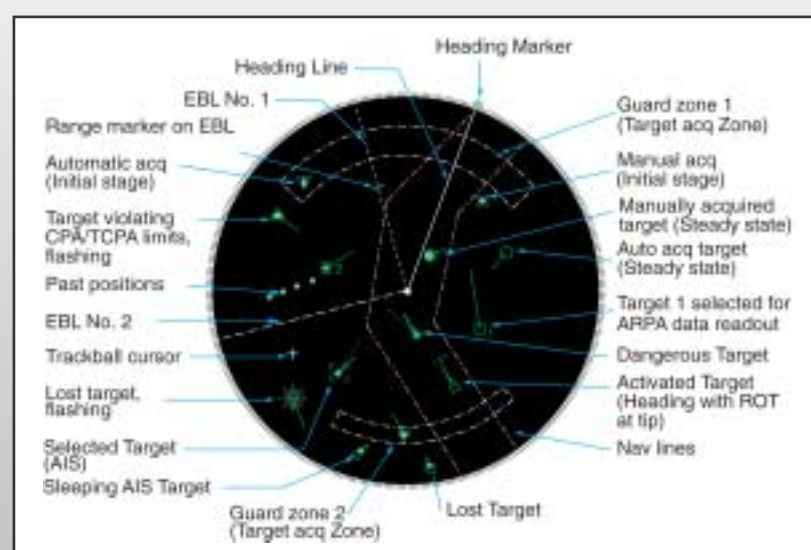

DATA DISPLAY

A variety of navigational information, own ship status, radar plotting data, wind, water temperature and information from other shipborne sensors are displayed on the cells. These selected targets are marked with a square symbol on the radar display. Magnify is a special feature of the FURUNO radars FAR-28x7 series. This looks like a delayed-sweep zoom that the IMO strictly prohibits, but where the Administration accepts, the Magnify feature enlarges part of radar display for some special maritime activity.

TARGET ASSOCIATION (Fusion)

An AIS-equipped ship may be displayed by both AIS and ARPA symbols. This is because the AIS position is measured by a GPS in L/L while the ARPA target blip and data are measured by range and bearing from own ship and located on the radar PPI. When the symbols are within an operator-set criteria, the ARPA symbol is merged in the AIS symbol. The criteria are determined by the differences in range, bearing, course, speed, etc.

MARKS AND SYMBOLS FOR ARPA AND AIS

AIS information

- **Static Data**
 - MMSI (Maritime Mobile Service Identity)
 - IMO number (Where available)
 - Call sign & name
 - Length and beam
 - Type of ship
 - Location of position-fixing antenna on the ship
- **Voyage related data**
 - Ship's draught
 - Hazardous cargo (type)
 - Destination and ETA (at masters discretion)
- **Dynamic data**
 - Ship's position with accuracy indication and integrity status
 - UTC
 - Course over ground (COG)
 - Speed over ground (SOG)
 - Heading
 - Navigation status (manual input)
 - Rate of turn (where available)
 - Update rates Dependent on speed and course alternation (2 s – 3 min)
- **Short safety-related messages**
 - Free messages

GUARD ZONES

Guard Zone

Automatic Acquisition Zone

Two automatic acquisition zones may be set in a sector or any form. They also act as suppression zones, avoiding unnecessary overloading to the processor and clutter by disabling automatic acquisition and tracking outside them. Targets in a automatic acquisition zone appear as inverse triangle. The operator can manually acquire important targets without restriction.

CPA Alarm Zone

Target tracking symbol changes to a triangle when its predicted course (vector) violates the operator set CPA/TCPA. The operator can readily change the vector lengths to evaluate target movement trend.

Guard Zones and Anchor Watch Zone

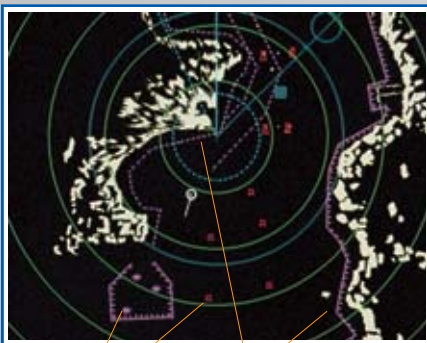

Guard Zones generate visual and audible alarms when targets enter the operator set zones. One of Guard Zones may be used as an anchor watch to alert the operator when own ship or targets drift away from the set zone.

TARGET TRAILS

The target trails feature generates monotone or gradual shading afterglow on all objects on the display. The shading afterglow paints the display just like on an analog PPI. The monotone trails are useful to show own ship movement and other ship tracks in a specific fishing operation. The trail time is adjustable for 15, 30 s, 1, 3, 6, 15, 30 min or continuous. The target trails are indicated in a different color from background. The unique feature in this radar is a choice of True or Relative mode in Relative Motion (only True in TM).

RADAR MAP

Map Marks

Map Lines

Up to 200 waypoints and up to 30 routes can be stored. Each route may contain up to 30 waypoints. A radar map is a combination of map lines and marks whereby the user can define and input the navigation area, route planning and monitoring data. The radar map has the capacity of 3,000 points for map lines and marks. The map data can be memorized to facilitate repeated use on a routine navigation area.

RADAR DISPLAY

1. Display

23.1" color LCD (SXGA 1280 x 1024 pixels),
470 (H) x 353 (V) mm,
Effective display diameter: 340 mm
Echo Color: Yellow, green or white in 32 levels

2. Range scales and ring intervals (nm)

Range: .125, .25, .5, .75, 1.5, 3, 6, 12, 24, 48, 96
Ring: .025, .05, .1, .25, .5, 1, 2, 4, 8, 16

3. Minimum range

30* m on 0.75 nm range scale
*Using a 10 m² test target at 3.5 m high above sea and antenna at 15 m high (IEC 60936-1). Different conditions give a different result, maybe close to 20 m in actual installations.

4. Range discrimination

5. Range ring accuracy

±0.2 %

6. Presentation modes

Head-Up, Course-Up, North-Up, North-Up TM

7. Heading information

Furuno GPS compass SC-60/120 is a recommendable heading sensor as a backup of a gyrocompass. Confirm with your Administrations.

8. Parallel index lines

1, 2, 3 or 6 lines (menu selectable)

9. Radar map

1500 points to create coastlines, own ship safety contour, isolated underwater dangers, buoys, traffic routing systems, prohibited areas, fairways as required by IMO.

Automatic Plotting

1. Acquisition

100 targets (e.g. manually 50, automatically 50)

2. Tracking

Automatic tracking of all acquired targets in 0.1 to 32 nm

3. Guard zone (Target Acquisition Area)

Two guard zone, one of them 0.5 nm depth

4. Vector

True or relative 30 s, 1, 3, 6, 12, 15, 30 min for prediction of target motion

5. Past positions

5 or 10 past positions at intervals of 30 s, 1, 2, 3, 6 min.

6. Collision warning

CPA limit: 0.2 - 10 nm, TCPA limit: 0 - 99 min.

7. Trial maneuver

Dynamic or static, with selected delay time.

AIS FUNCTIONS (Data input from AIS is required)

1. Symbols

Sleeping, Activated, Dangerous, Selected, Lost targets

2. Number of targets

1,000 targets max.

3. Data indication

Basic and expanded data
