Welcome

Welcome to the GE family. We're proud of our quality products and we believe in dependable service. You'll see it in this easy-to-use manual and you'll hear it in the friendly voices of our customer service department. Best of all, you'll experience these values each time you enjoy the comfort of your air conditioner. That's important, because your new air conditioner will be part of your family for a long time.

Start Here!...Before using your air conditioner

Write down the model and serial numbers here. They are on a label on the left side of the air conditioner below the air discharge area. Staple your receipt to the inside back cover of this manual. You will need it to obtain service under warranty.

Need Help?

Help us help you

800.626.2000

Before you call for service, there are a few things you can do to help us serve you better. *Read this manual.* It contains instructions to help you use and maintain your air conditioner properly.

Save time and money. Check the section titled "If Something Goes Wrong" before calling. This section helps you to solve common problems that might occur.

If you do need service, you can relax knowing help is only a phone call away. A list of toll-free customer service numbers is included in the back of this book. Or call the GE Answer Center[®] at 800.626.2000, 24 hours a day, 7 days a week.

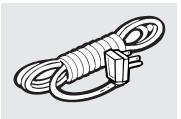

IMPORTANT SAFETY INFORMATION

READ ALL SAFETY INFORMATION BEFORE USING

- This air conditioner must be properly installed in accordance with the Installation Instructions before it is used.
- Repair or replace immediately all electric service cords that have become frayed or otherwise damaged.
- Turn the mode control knob to *OFF* and unplug your air conditioner before making any repairs.

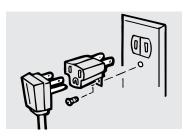

NOTE: We strongly recommend that any servicing be performed by a qualified individual.

Extension Cord

If an extension cord is required to reach the nearest wall receptacle, use only a UL-listed, 3-wire, grounded, 14 gauge, 15A, 125V appliance extension cord. For models with nameplate ratings greater than 12 amperes, do not use an extension cord.

Adapter Plug

This is a temporary method. UL-listed adapters are available at most hardware stores. Because most 2-prong outlets are not grounded, we strongly advise against using an adapter plug. However, a temporary connection may be made where local codes permit and if the 2-prong wall outlet is properly grounded.

When you plug the adapter in, make sure the larger prong goes into the larger slot to provide the proper polarity for the power cord.

FOR PROPER GROUNDING:

- 1 Screw the adapter to the outlet, using the outlet cover screw.
- 2 Ground the outlet through the house wiring.

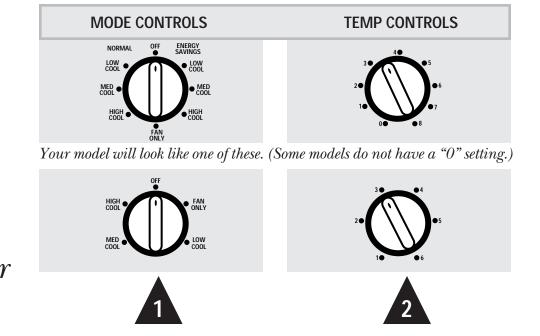

When disconnecting the power cord from the adapter, hold the adapter close to the outlet while pulling the plug out. If this is not done, the grounding connector is likely to break with repeated use.

If the grounding connector breaks, *DO NOT USE* the air conditioner until a proper ground has again been made.

SAVE THESE INSTRUCTIONS

Operating Instructions

The controls on your air conditioner

The energy saver switch controls the fan. **ENERGY SAVINGS**—the fan and compressor cycle on and off together. This results in wider variations of room temperature and humidity. Normally used when the room is unoccupied.

NORMAL—the fan runs all the time, while the compressor cycles on and off. This switch must be set at *NORMAL* in order to use the fan setting (on the mode control).

HIGH COOL, MED COOL and *LOW COOL* provide cooling with different fan speeds.

FAN ONLY provides air circulation and filtering without cooling.

NOTE:

If you move the switch from a cool setting to OFF or to a fan setting, wait at least 3 minutes before switching back to a cool setting.

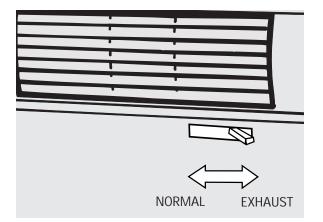

2 Temp Control

The temp control is used to maintain the room temperature. The compressor will cycle on and off to keep the room at the same level of comfort. The higher the number selected, the cooler the indoor air will become.

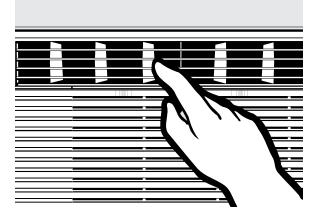

The blower runs as long as the mode control is not on *OFF*.

Cooling Descriptions

FOR NORMAL COOLING Select *MED COOL* with the temp at 3 or 4. FOR MAXIMUM COOLING Select *HIGH COOL* with the temp at 6 or 8. FOR QUIETER & NIGHTIME COOLING Select *LOW COOL* with the temp at 3 or 4.

The vent control is a lever located on the control panel.

When the vent control is set at normal, only the air inside the room is circulated, cooled and filtered.

When set at exhaust, some indoor air will be exhausted from the room. This will reduce the cooling effect.

Tabs inside the horizontal louvers let you control the air direction left, right or straight ahead.

Operating Instructions

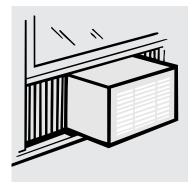

Care & Cleaning

Grille and Case

Turn the air conditioner off and remove the plug from the wall outlet before cleaning. To clean, use water and a mild detergent. Do not use bleach or abrasives.

Outdoor Coils

The coils on the outdoor side of the air conditioner should be checked regularly. If they are clogged with dirt or soot they may be professionally steam cleaned, a service available through your GE service outlet.

Front Grille and Air Filter

The air filter is behind the front grille insert and should be checked and cleaned at least every 30 days or more often if necessary.

To remove the front grille insert: Place your hand on the bottom of the front grille. Pull it out and down to release the tabs.

Remove the air filter. The filter can be washed in warm soapy water. Rinse and let the filter dry before replacing it.

To replace the grille insert:

Hook the tabs on the left and right side. Gently press until it snaps into place.

A CAUTION:

DO NOT operate the air conditioner without a filter because dirt and lint will clog the unit and reduce performance.

Installation Instructions

Important Electrical Safety-Read Carefully

Important Notes

Installer: Leave these instructions with the appliance.

Owner: Keep these instructions for future use.

- For personal safety, this air conditioner must be properly grounded.
- It is important to have the wall outlet and circuit checked by a qualified electrician if there is any doubt as to whether a proper ground exists.
- Follow National Electrical Code (NEC) or local codes and ordinances.

A CAUTION:

- Do not, under any circumstances, cut or remove the third (ground) prong from the power cord.
- Do not change the plug on the power cord of this air conditioner.
- Aluminum house wiring may present special problems consult a qualified electrician.

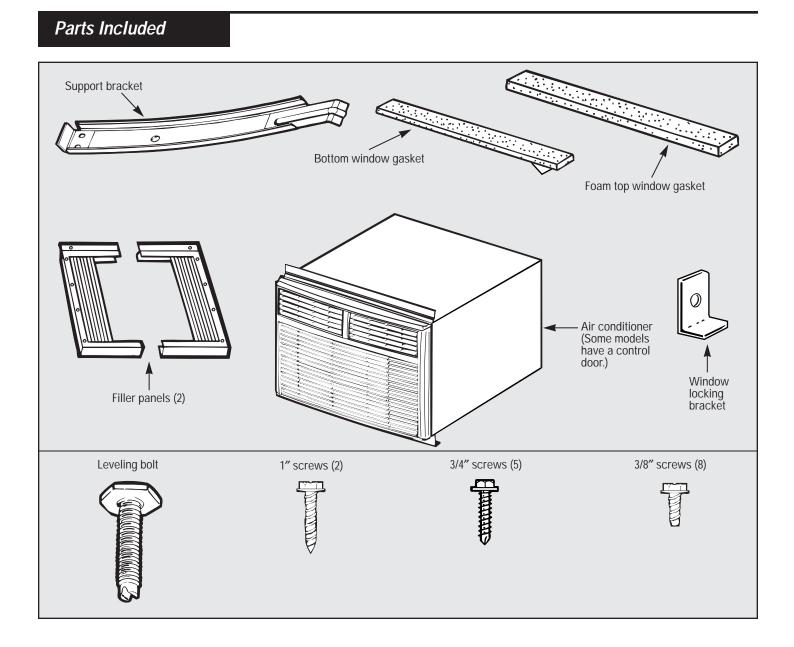

Electrical Requirements

Parallel 115V., 15 Amp. **The 115-volt models** require a 115/120-volt a.c., 60 Hz grounded outlet protected with a 15-amp time delay fuse or circuit breaker.

The 3-prong grounding plug minimizes the possibility of electric shock hazard. If the wall outlet you plan to use is only a 2-prong outlet, it is your responsibility to have it replaced with a properly grounded 3-prong wall outlet.

Before you begin

Tools Needed

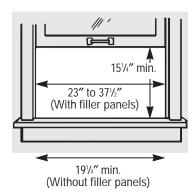

- Blade-type screwdriver
- 1/4" hex-head nut driver
- 9/16" open-end or adjustable wrench
- Ruler or tape measure

- Scissors or knife
- Level
- Pencil

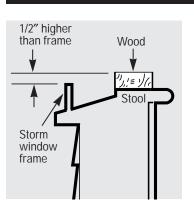

Window Requirements

- These instructions are for a standard double-hung window. You will need to modify them for other types of windows.
- The air conditioner can be installed without the filler panels if needed to fit in a narrow window. See the window opening dimensions to the right.
- All supporting parts should be secured to firm wood, masonry or metal.
- The electrical outlet must be within reach of the power cord. Do not use an extension cord.

Storm Window Requirements

A storm window frame will not allow the air conditioner to tilt towards the outside and will keep it from draining properly. To adjust for this, attach a piece of wood to the stool.

WOOD PIECES:

WIDTH: 2" *LENGTH*: Long enough to fit inside the window frame.

THICKNESS: To determine the thickness, place a piece of wood on the stool to make it 1/2" higher than the top of the storm window frame.

Attach securely with nails or screws.

Installation Instructions

Read completely then follow step-by-step

Install the 1 Insert the right and left hand **2** Secure them with eight 3/8''Filler Panels filler panels into the top and screws, four on each side. bottom rails. 1" screws.

- Stool
- *NOTE: This downward tilt towards the outside prevents water from entering the room.*

bracket

Install the Air Conditioner in the Window

- Center the air conditioner in the window placing it on the support bracket. Make sure the bottom rail is behind the window stool.
- 2 Lower the window until it touches behind the air conditioner top rail.

A CAUTION:

- DO NOT release the grip on the air conditioner until it fits tight between the window and the stool.
- DO NOT drill a hole in the base pan. The air conditioner is designed to operate with water in the base pan.

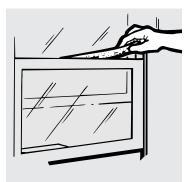

Slide Out the Filler Panels

- Extend the filler panels on both sides until they touch the window tracks.
- **2** Secure the top and the bottom with four 3/4" long screws.

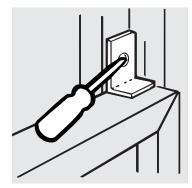

INSTALLATION WITHOUT THE FILLER PANELS

If filler is required on the sides of the air conditioner, cut filler sheet (not supplied) to size and fill both sides.

Install the Window Gasket and the Locking Bracket

- Cut the foam top window gasket to the window width.
- 2 Stuff the foam between the glass and the window to prevent air and insects from getting into the room.
- **3** Attach the window locking bracket with a 3/4" screw.

Helpful Information

Things That Are Normal

Noise	Explanation
PINGI	You may hear a pinging noise caused by water being picked up and thrown against the condenser on rainy days or when the humidity is high. This design feature helps remove moisture and improve efficiency.
"CLICK"	You may hear the thermostat click when the compressor cycles on and off.
DRIP	Water will collect in the base pan during high humidity or on rainy days. The water may overflow and drip from the outdoor side of the unit.
WHIR!	The fan may run even when the compressor is not.

If Something Goes Wrong

Before You Call for Service

Problem	Possible Causes	What to Do
Air Conditioner Doesn't Start	The air conditioner is unplugged	• Make sure the air conditioner plug is pushed completely into the outlet.
	The fuse is blown/circuit breaker is tripped	• Check the house fuse/circuit breaker box and replace fuse or reset the breaker.
	Power failure	• If power failure occurs, turn the mode control to OFF . When power is restored, wait 3 minutes to restart the air conditioner to prevent tripping of the compressor overload.
<i>Air Conditioner Does Not Cool as it Should</i>	Airflow is restricted	• Make sure there are no curtains, blinds or furniture blocking the front of the air conditioner.
	The temp control may not be set high enough	• Turn the knob to a higher number. The highest setting provides maximum cooling.
	The air filter is dirty	• Clean the filter at least every 30 days. See the Care and Cleaning section.
	The room may have been hot	• When the air conditioner is first turned on you need to allow time for the room to cool down.
	Cold air is escaping	• Check for open furnace floor registers and cold air returns.
		• Set the vent in the closed position.
	Cooling coils have iced up	• See freezing up below.
Air Conditioner Freezing Up	Ice blocks the air flow and stops the air conditioner from cooling the room	• Set the mode control at <i>FAN ONLY</i> or <i>HIGH COOL</i> with the temp at 1 or 2.
