Help us help you . . .

Read this book carefully.

It is intended to help you operate and maintain your new refrigerator properly.

Keep it handy for answers to your questions.

If you don't understand something or need more help, write (include your phone number):

Consumer Affairs
GE Appliances
Appliance Park
Louisville, KY 40225

Write down the model and serial numbers.

You'll see them on a label at the bottom, just inside the fresh food compartment door.

These numbers are also on the Consumer Product Ownership Registration Card that came with your refrigerator.

Before sending in the registration card, please write these numbers here:

Model Number

Serial Number

Use these numbers in any correspondence or service calls concerning your refrigerator.

If you received a damaged refrigerator, immediately contact the dealer (or builder) that sold you the refrigerator.

Save time and money.

Before you request service, check the Problem Solver on pages 13 and 14. It lists causes of minor operating problems that you can correct yourself.

Energy-saving tips

- Location of your refrigerator is important. Avoid locating it next to your range, a heating vent or where the sun will shine directly on it.
- Don't open doors more often than necessary.
- Close doors as soon as possible, particularly in hot, humid weather.
- Be sure doors are closed tightly. Before leaving the house or retiring for the night, check to be sure the doors haven't been left open accidentally.
- Store only those foods requiring refrigeration in your refrigerator.
- Wipe moisture from bottles and cartons before putting them in the refrigerator.
- Keep foods covered to reduce moisture buildup inside the refrigerator.
- If you turn the controls to the coldest position for quick chilling or freezing, be sure to turn them back to regular settings.
- Don't overcrowd your refrigerator. Overcrowding can require extra electrical energy to keep everything cool.

IMPORTANT SAFETY INSTRUCTIONS

Read all instructions before using this appliance.

WARNING—When using this appliance, always exercise basic safety precautions, including the following:

- Use this appliance only for its intended purpose as described in this Use and Care Book.
- This refrigerator must be properly installed in accordance with the Installation Instructions before it is used. See grounding instructions below and on page 4.
- Never unplug your refrigerator by pulling on the power cord. Always grip plug firmly and pull straight out from the outlet.
- Repair or replace immediately all electric service cords that have become frayed or otherwise damaged. Do not use a cord that shows cracks or abrasion damage along its length or at either the plug or connector end.
- When moving your refrigerator away from the wall, be careful not to roll over or damage the power cord.
- After your refrigerator is in operation, do not touch the cold surfaces, particularly when hands

are damp or wet. Skin may adhere to these extremely cold surfaces.

- If your refrigerator has an automatic icemaker, do not place fingers or hands on the automatic icemaking mechanism while the refrigerator is plugged in. This will prevent contact with the moving parts of the ejector mechanism, or with the heating element that releases the cubes.

- Don't refreeze frozen foods which have thawed completely. The United States Department of Agriculture in Home and Garden Bulletin No. 69 says:

“... You may safely refreeze frozen foods that have thawed if they still contain ice crystals or if they are still cold—below 40°F.

“... Thawed ground meats, poultry or fish that have any off-odor or off-color should not be refrozen and should not be eaten. Thawed ice cream should be discarded. If the odor or color of any food is poor or questionable, get rid of it. The food may be dangerous to eat.

“Even partial thawing and refreezing reduce the eating quality of foods, particularly fruits, vegetables and prepared foods. The eating quality of red meats is affected less than

that of many other foods. Use refrozen foods as soon as possible to save as much of their eating quality as you can.”

- If your old refrigerator is still around the house but not in use, be sure to remove the doors. This will reduce the possibility of danger to children.

- Unplug your refrigerator.

A. Before making any repairs.

Note: We strongly recommend that any servicing be performed by a qualified individual.

B. Before cleaning.

C. Before replacing a burned-out light bulb, the refrigerator should be unplugged in order to avoid contact with a live wire filament. (A burned-out light bulb may break when being replaced.)

Note: Turning control to OFF position does not remove power to the light circuit.

- Do not operate your refrigerator in the presence of explosive fumes.

Installation Requirements—IMPORTANT: Please Read Carefully.

How to connect electricity

For personal safety, this appliance must be properly grounded.

The power cord of this appliance is equipped with a three-prong (grounding) plug which mates with a standard three-prong (grounding) wall outlet (Fig. 1) to minimize the possibility of electric shock hazard from this appliance.

Have the wall outlet and circuit checked by a qualified electrician to make sure the outlet is properly grounded.

Where a standard two-prong wall outlet is encountered, it is your personal responsibility and obligation to have it replaced with a properly grounded three-prong wall outlet.

DO NOT, UNDER ANY CIRCUMSTANCES, CUT OR REMOVE THE THIRD (GROUND) PRONG FROM THE POWER CORD.

(continued next page)

Installation Requirements (continued)—IMPORTANT... Please Read Carefully.

Use of Adapter Plug (115-volt units)

Because of potential safety hazards under certain conditions, we strongly recommend against use of an adapter plug. However, if you still elect to use an adapter, where local codes permit, a **TEMPORARY CONNECTION** may be made to a properly grounded two-prong wall outlet by use of a UL listed adapter (Fig. 2) available at most local hardware stores.

The larger slot in the adapter must be aligned with the larger slot in the wall outlet to provide proper polarity in the connection of the power cord.

CAUTION: Attaching an adapter ground terminal to wall outlet cover screw does not ground an appliance unless cover screw is metal, and not insulated, and wall outlet is grounded through house wiring. You should have circuit checked by a qualified electrician to make sure the outlet is properly grounded.

When disconnecting the power cord from the adapter, always hold the adapter with one hand. If this is not done, the adapter ground terminal is very likely to break with repeated use.

Should the adapter ground terminal break, DO NOT USE the appliance until a proper ground has again been established.

Use of Extension Cords

Because of potential safety hazards under certain conditions, we strongly recommend against the use of an extension cord. However, if you still elect to use an extension cord, it is absolutely necessary that it be a UL listed 3-wire grounding

type appliance extension cord having a grounding type plug and outlet and that the electrical rating of the cord be 15 amperes (minimum) and 120 volts.

The refrigerator should always be plugged into its own individual electrical outlet—(115 volt, 60 Hertz, or 100 volt, 50 Hertz, single phase AC). This is recommended for best performance and to prevent overloading house wiring circuits, which could cause a fire hazard from overheating wires.

Refrigerator Location

Do not install refrigerator where temperature will go below 60°F. because it will not run often enough to maintain proper temperatures.

Do install it on a floor strong enough to support it fully loaded.

Also see Energy-Saving Tips regarding location.

Clearances

Allow the following clearances for ease of installation, proper air circulation, and plumbing and electrical connections:

Sides	5/8"
Top	1"
Back	1"

Allow the following door clearance:

Sides	3/4"
-------	------

Water Supply to Icemaker (on models so equipped)

You will need to connect your icemaker to a cold water line. A water supply kit containing copper tubing, shut-off valve, fittings and instructions is available at extra cost from your dealer. There should be sufficient tubing for the icemaker from the cold water supply to allow moving the refrigerator out from the wall several feet (approximately 8 feet of 1/4" copper tubing in 3 10-inch diameter coils).

Rollers

Adjustable rollers behind the base grille enable you to move the refrigerator away from the wall for cleaning. These rollers should be set so the refrigerator rests firmly on the floor. To assure that the doors will close automatically from a halfway-open position, there is a built-in tilt from the front to the back of the cabinet. Side-by-side refrigerators also have specially designed door hinges that lift both doors slightly when opened, allowing the force of gravity to help close them securely.

To adjust rollers, remove the base grille by grasping it at the bottom and pulling it out.

Turn the roller adjusting screws clockwise to raise the refrigerator, counterclockwise to lower it. Use an adjustable wrench (3/8" hex head bolt) or pliers.

When adjusting front rollers for proper door closure, we recommend that the bottom front edge of the cabinet be approximately 5/8" from the floor.

To replace base grille, align prongs on back of grille with clamps in cabinet and push forward until grille snaps into place.

Operating Your Refrigerator

Set the Temperature Controls

Your refrigerator has two controls that let you regulate the temperature in the fresh food and freezer compartments.

INITIALLY, set the **FRESH FOOD** control at 5 and the **FREEZER** control at C.

For colder or warmer temperatures, adjust the desired compartment control one letter or number at a time.

IMPORTANT

When initially setting the controls, or when adjusting them, allow 24 hours for the temperatures to stabilize, or even out. Do this before filling the refrigerator with large amounts of fresh or frozen foods.

Note: Turning the fresh food control to "OFF" turns off BOTH compartments—fresh food AND freezer, but does not shut off power to the refrigerator.

How to Test Temperatures

Use the milk test for the fresh food compartment. Place a container of milk on the top shelf in the fresh food compartment. Check it a day later. If the milk is too warm or too cold, adjust the temperature controls.

Use the ice cream test for the freezer compartment. Place a container of ice cream in the center of the freezer compartment. Check it after a day. If it's too hard or too soft, adjust the temperature controls.

Always allow 24 hours for the refrigerator to reach the temperature you set.

If you turn your household thermostat below 60°F. at night

... you may want to turn the *lettered* control one step colder, as from "C" to "D." Cooler temperatures in the house may cause the compressor to operate less frequently, thus allowing the freezer compartment to warm somewhat. To protect your frozen food supply, leave your *lettered* setting at this colder setting for the entire winter or for whatever period of time you are turning down your thermostat. This is especially important when the thermostat is turned down for an extended period.

This change should have no effect on your fresh food compartment. However, if freezing occurs, turn the numbered control one step warmer, as from "5" to "4."

When you stop turning the thermostat down, turn temperature controls back to their regular settings.

Automatic Energy Saver System

You won't find an "energy saver" switch on this refrigerator.

Warm liquid from the refrigerator's condenser is automatically circulated around the front edge of the freezer compartment to help keep moisture from forming on the outside of the refrigerator during humid weather.

Many refrigerators use special electric heaters. This refrigerator needs none. That's why there is no "energy saver" switch... there's no need for it.

No Defrosting

It is not necessary to defrost the freezer or fresh food compartments. Your refrigerator is designed and equipped to defrost itself automatically.

*U.S. Department of Agriculture

Meats, fish and poultry purchased from the store vary in quality and age; consequently, safe storage time in your refrigerator will vary.

To store unfrozen meats, fish and poultry:

- Always remove store wrappings.
- Rewrap in foil, film or wax paper and refrigerate immediately.

To store cheese, wrap well with wax paper or aluminum foil, or put in a plastic bag.

- Carefully wrap to expel air and help prevent mold.
- Store pre-packaged cheese in its own wrapping if you wish.

To store vegetables, use the vegetable drawers—they've been designed to preserve the natural moisture and freshness of produce.

- Covering vegetables with a moist towel helps maintain crispness.
- As a further aid to freshness, pre-packaged vegetables can be stored in their original wrapping.

Note: Special fresh food compartment drawers (on models so equipped) make it unnecessary to wrap certain foods which they've been designed to preserve. These drawers are described on page 8.

To store ice cream—Fine-quality ice cream, with high cream content, will normally require slightly lower temperatures than more "airy" already-packaged brands with low cream content.

- It will be necessary to experiment to determine the freezer compartment location and temperature control setting to keep your ice cream at the right serving temperature.
- The rear of the freezer compartment is slightly colder than the front.

Tips on freezing foods

There are three essential requirements for efficient home freezing:

- 1. Initial quality.** Freeze only top-quality foods. Freezing retains quality and flavor; it cannot improve quality.
- 2. Speed.** The quicker fruits and vegetables are frozen after picking, the better the frozen product will be. You'll save time, too, with less culling and sorting to do.
- 3. Proper packaging.** Use food wraps designed especially for freezing.

To freeze meat, fish and poultry, wrap well in freezer-weight foil (or other heavy-duty wrapping material) forming it carefully to the shape of the contents. This expels air. Fold and crimp ends of the package to provide a good, lasting seal.

Don't refreeze meat that has completely thawed; meat, whether raw or cooked, can be frozen successfully only once.

Limit freezing of fresh (unfrozen) meats or seafoods to number of pounds at a time as follows:

TFX19, TFX20	20 pounds
TFX2221 pounds
TFX2426 pounds

For convenience . . .

- Store all like things together. This not only saves time, but electricity—because you can find foods faster.
- Place the oldest items up front so they can be used up promptly.
- Use shelves on the door for most often used sauces and condiments.
- Use the meat drawer, if your model has one, for meats you do not freeze.

To save money in energy and food costs:

- Place most perishable items toward the rear of the top shelf as they will stay coldest in this part of the fresh food compartment.
- Cover moist foods with tight lids, plastic film or foil.
- Leaf vegetables and fruits placed in storage drawers will last longer when stored in closed plastic containers or wrapped in plastic film.
- Do not overload your fresh food or freezer compartment with a lot of warm food at once.
- Open the door the fewest times possible to save electrical energy.
- When going out of town for several days, leave as few perishables as possible in refrigerator. If your refrigerator has an icemaker, set the icemaker to the OFF position and shut off water to the refrigerator.

Shelf Positions

How to rearrange your shelves

Some models have adjustable shelves in the fresh food and freezer compartments, enabling you to make efficient shelf arrangements to fit your family's food storage needs.

Adjustable Shelves in Fresh Food Compartment (on models so equipped)

To remove shelves: Tilt shelf up at front, then lift it up and out of tracks on rear wall of refrigerator.

To replace shelves: Select desired shelf height. With shelf front raised slightly, engage top lugs in tracks at rear of cabinet. Then lower front of shelf until it locks into position.

Tempered glass shelves (on models so equipped) are adjustable in the same manner.

Multi-Position Shelves in Freezer Compartment (on models so equipped)

Shelf supports at various levels in the freezer compartment let you reposition the shelves from time to time to better accommodate your variable inventory of frozen foods.

To reposition shelves:

1. While pressing tabs on shelf supports on right wall, lift shelf out of grooves in supports.

2. Pull shelf sideways until shelf rods come out of holes on left wall.

3. Select desired shelf height and insert rods into holes on left wall. **If shelf supports at desired level on right wall have tabs, lower shelf into grooves on support while pressing tabs. Be sure shelf wire is fully inserted into grooves.**

If shelf supports at desired level on right wall do not have tabs, merely lower shelf into place on supports.

Juice-Can Rack (on models so equipped)

Cans of frozen juice are easily accessible when stored in the rack on the freezer compartment door.

To load it, place first can in bottom opening of rack. Then load additional cans into the rack from the top.

General Electric Food-Saver System

Moist 'n Fresh Drawer (on models so equipped)

The top drawer is designed to keep **unwrapped foods** fresh by retaining the natural moisture content of foods such as:

- Artichokes
- Asparagus
- Beets, topped
- Blueberries
- Carrots
- Celery
- Cherries
- Corn
- Currants
- Greens, leafy
- Lettuce
- Parsley
- Peas, green
- Plums
- Radishes
- Rhubarb
- Spinach
- Tomatoes, ripe

As in any refrigerated storage area, it is recommended that **odorous foods be stored wrapped**—foods such as:

- Broccoli
- Brussels Sprouts
- Cabbage
- Cauliflower
- Green Onions
- Parsnips
- Turnips

Storage time will depend upon the type of food and its condition when placed in the drawer.

Excess water which may accumulate in the bottom of the Moist 'n Fresh drawer should be poured out and the drawer wiped dry.

The Moist 'n Fresh drawer is partially sealed by gaskets attached to the cover at the front and back edges. *Always push the drawer all the way in.*

Convertible Meat Keeper (on models so equipped)

The Convertible Meat Pan drawer has its own cold air duct to allow a stream of cold air from the freezer compartment to flow around the drawer.

The **variable temperature control** regulates the air flow from the freezer compartment.

Set control lever all the way down—the coldest setting—to store fresh meats. If lever is left in meat position for a long period of time, some frost may form on the inside of the drawer.

Set control lever all the way up to convert the Meats or Vegetables drawer to normal refrigerator temperature and provide extra vegetable storage space. Cold air duct is turned off.

Variable settings between these extremes can be selected.

Sealed Snack Pack (on models so equipped)

The Sealed Snack Pack—and glass shelf to which it is attached—can be relocated within the fresh food compartment. The sealed drawer retains high humidity for convenient storage of meats and cheese, bacon, hors d'oeuvres, spreads and snacks.

Drawer Removal

Drawers at bottom of fresh food compartment will stop before coming all the way out of refrigerator to help prevent contents from spilling onto floor. Drawers can easily be removed by grasping the sides and lifting up slightly while pulling past "stop" location.

To remove drawers when the fresh food compartment door cannot be opened fully, follow the procedure that applies to your model.

Models TFX22 & TFX24

1. Remove food from shelf above sealed vegetable drawer and take out shelf. Take food off the glass cover and out of the drawer.

2. Remove the flexible gasket at the rear of the vegetable drawer. Lift each end straight up until the slots on the gasket are free of the drawer support tabs.

3. Pull the drawer partway out. Reach in, push the rear of the glass up and, at the same time, push it back until it clears front-corner retainers.

4. Tilt and remove the cover.

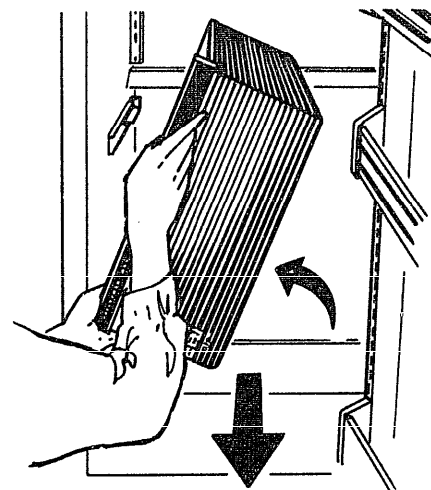

5. Pull the drawer forward, lift the front to clear stops, and remove the drawer. If the refrigerator door doesn't open completely, pull the drawer out until it hits the door. Then lift the drawer up until it is higher than the drawer supports, tilt it and take it out.

6. If tape holds Convertible Meat Pan cover to drawer supports, remove the tape. Pull drawer partway out. Reach in, push the rear of the glass up and, at the same time, back until it clears front-corner retainers.

7. Tilt and remove the cover.

8. Tilt and remove the drawer.

After cleaning, replace in reverse order.

When drawers and covers are back in place, reinstall gasket at rear of sealed vegetable drawer. Fit the end of the plastic drawer support into the slot on the gasket, with the rubber gasket flap facing you. Make sure the gasket snaps into place.

(continued next page)

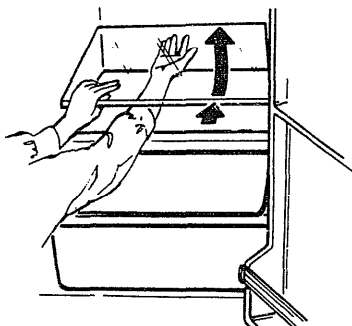

Drawer Removal

(continued)

Models TFX19 & TFX20

1. If your refrigerator has adjustable (cantilever) shelves, temporarily locate bottom adjustable shelf higher up in cabinet.

2. Pull vegetable drawer part-way out. Reach in, push rear of cover up and, at the same time, push it back until it clears front-corner retainers.

3. Tilt and remove the cover.

4. Tilt and remove the drawer.

Model TFX20 with full-width meat drawer:

5. Grasp rear of flexible meat pan cover, bend it upward and push it back until notch on right of cover lines up with tab on cover support.

6. Tilt cover and take it out.

7. Tilt and remove the drawer.

After cleaning, reverse procedure to replace.

Ice Service

Ice Trays

(on models so equipped)

Ice trays are designed to release ice cubes easily. Hold tray upside-down over a container and twist both ends to release cubes.

For only one or two ice cubes, leave the tray right-side up, twist both ends slightly and remove desired number of cubes.

Wash ice trays and storage bin in lukewarm water only. Do not put them in an automatic dishwasher.

Accessories

Automatic Icemaker Accessory Kit

(optional at extra cost)

A GE automatic icemaker will replace the ice you use... automatically. It can keep you supplied with a binful of cubes—ice for everything, everybody—without fuss or muss.

If your refrigerator did not come already equipped with an automatic icemaker, you may add one—contact your local GE dealer; specify UK-KIT-4 or IM-1. A water supply kit containing copper tubing, shut-off valve, fittings and instructions needed to connect the icemaker to your cold water line is also available at extra cost.

The perfect companion to your automatic icemaker—a water filter

Your ice cubes can only be as fresh-tasting as the water that produces them. That's why it's a good idea to purify your water with a water filter.

Its activated charcoal removes musty, stale odors and unpleasant medicinal, metallic tastes. A porous fiber cartridge catches dirt, rust particles, sand and silt while special crystals reduce deposits of hard scale.

The water filter is an option at extra cost and is available from your GE dealer. Specify WR97X0214. It has complete installation instructions and installs in minutes on 1/4" O.D. copper water line.

Care and Cleaning

Outside

The door handles and trim can be cleaned with a cloth dampened with a solution of mild liquid dishwashing detergent and water. Dry with a soft cloth. Don't use wax on the door handles and trim.

Keep the finish clean. Wipe with a clean cloth lightly dampened with kitchen appliance wax or mild liquid dishwashing detergent. Dry and polish with a clean, soft cloth. Do not wipe the refrigerator with a soiled dishwashing cloth or wet towel. These may leave a residue that can erode the paint. Do not use scouring pads, powdered cleaners, bleach or cleaners containing bleach because these products can scratch and weaken the paint finish.

Protect the paint finish. The finish on the outside of the refrigerator is a high quality, baked-on paint finish. With proper care, it will stay new-looking and rust-free for years. Apply a coat of kitchen/appliance wax when the refrigerator is new and then at least twice a year.

Appliance Polish Wax & Cleaner (Cat. No. WR97X0216) is available from GE Appliance Parts Marts.

Inside

Inside the fresh food and freezer compartments should be cleaned at least once a year. Unplug the refrigerator before cleaning. If this is not practical, wring excess moisture out of sponge or cloth when cleaning around switches, lights or controls.

Use warm water and baking soda solution—about a tablespoon of baking soda to a quart of water. This both cleans and neutralizes odors. Rinse thoroughly with water and wipe dry.

Other parts of the refrigerator—including door gaskets, meat and vegetable drawers, ice storage bin and all plastic parts—can be cleaned the same way. Do not use cleansing powders or other abrasive cleaners.

To help prevent odors, leave an open box of baking soda in the rear of the refrigerator, on the top shelf. Change the box every three months. An open box of baking soda in the freezer will absorb stale freezer odors.

Do not wash any plastic parts from your refrigerator in your automatic dishwasher.

Drain opening in freezer compartment. During yearly cleaning, remove bottom freezer basket and flush a solution of baking soda (one teaspoon) and two cups of hot (not boiling) water through the drain line with the help of a meat baster. This will help eliminate odor and reduce the likelihood of a clogged drain line.

If drain becomes clogged, use a meat baster and baking-soda-and-water solution to force the clog through the drain line.

Behind Refrigerator

Care should be taken in moving your refrigerator away from the wall. All types of floor coverings can be damaged, particularly cushioned coverings and those with embossed surfaces. Pull the refrigerator straight out and return it to position by pushing it straight in. Moving your refrigerator in a side direction may result in damage to your floor covering or refrigerator.

Condenser

For most efficient operation, you will need to keep the condenser clean. Remove the base grille (see page 4) and either sweep away or vacuum up dust that is readily accessible. For best results, use a brush specially designed for this purpose. It is available at most appliance parts stores. This easy cleaning operation should be done at least once a year.

Care and Cleaning (continued)

Light bulb replacement

In Fresh Food Compartment

1. Unplug refrigerator.
2. To align the control knob properly, note position of numbered control for proper reassembly and pull off knob.

3. Pull bottom of light panel down about 1/4"—just enough to disengage lip at rear from grooves in retainers on rear wall.

4. Lift panel to disengage top from pins on side walls; remove panel.

After replacing with same size bulb, reinstall panel (hang top on pins; pull bottom down, push it back and release it to let lip engage grooves in retainers). Replace temperature control knob in OFF position, turn it to previous setting, and plug refrigerator back in.

In Freezer Compartment

1. Unplug refrigerator.

2. Remove shelf just below light shield. (Shelf will be easier to remove if it is emptied first.)
3. Pull plastic light shield toward you. (It will bend to free tabs from grooves.)

After replacing with same size bulb, reinstall shield and shelf and plug refrigerator back in.

When you go on vacation

For extended vacations or absences, shut off power to refrigerator, turn the numbered control to OFF, clean interior with baking soda solution of one tablespoon of soda to one quart of water. Wipe dry. To prevent odors, leave open box of soda in refrigerator. Leave doors open.

For shorter vacations, remove perishable foods and leave controls at regular settings. However, if room temperature is expected to drop below 60°F., follow same instructions as for extended vacations.

Move icemaker feeler arm to OFF (up) position and be sure to shut off water supply to the refrigerator.

When you move

Disconnect power cord from wall outlet, remove all food and clean and dry the interior.

Secure all loose items such as grille, shelves and storage pans by taping them securely in place to prevent damage.

Be sure refrigerator stays in *upright position* during actual moving and in van. Refrigerator must be secured in van to prevent movement. Protect outside of refrigerator with blanket.

If You Need Service

To obtain service, see your warranty on the back page of this book.

We're proud of our service and want you to be pleased. If for some reason you are not happy with the service you receive, here are three steps to follow for further help.

FIRST, contact the people who serviced your appliance. Explain why you are not pleased. In most cases, this will solve the problem.

NEXT, if you are still not pleased, write all the details—including your phone number—to:

Manager, Consumer Relations
GE Appliances
Appliance Park
Louisville, Kentucky 40225

FINALLY, if your problem is still not resolved, write:

Major Appliance
Consumer Action Panel

Chicago, Illinois 60606

YOUR GE REFRIGERATOR WARRANTY

Save proof of original purchase date such as your sales slip or cancelled check to establish warranty period.

WHAT IS COVERED

FULL ONE-YEAR WARRANTY

For one year from date of original purchase, we will provide, free of charge, parts and service labor in your home to repair or replace **any part of the refrigerator** that fails because of a manufacturing defect.

FULL FIVE-YEAR WARRANTY

For five years from date of original purchase, we will provide, free of charge, parts and service labor in your home to repair or replace **any part of the sealed refrigerating system** (the compressor, condenser, evaporator and all connecting tubing) that fails because of a manufacturing defect.

LIMITED LIFETIME WARRANTY

For the life of the refrigerator, we will replace, free of charge, **any tinted see-through pan or drawer made from Lexan® polycarbonate resin** and furnished with the refrigerator if the pan or drawer breaks during normal household use. Drawer covers are not included. The drawers can be exchanged at a GE Appliance Parts Mart, Factory Service Center, or by writing to the address below.

This warranty is extended to the original purchaser and any succeeding owner for products purchased for ordinary home use in the 48 mainland states, Hawaii and Washington, D.C. In Alaska the warranty is the same except that it is LIMITED because you must pay to ship the product to the service shop or for the service technician's travel costs to your home.

All warranty service will be provided by our Factory Service Centers or by our authorized Customer Care® servicers during normal working hours.

Look in the White or Yellow Pages of your telephone directory for GENERAL ELECTRIC COMPANY, GENERAL ELECTRIC FACTORY SERVICE, GENERAL ELECTRIC-HOTPOINT FACTORY SERVICE or GENERAL ELECTRIC CUSTOMER CARE® SERVICE.
