## **MODEL G8144Z/G8145Z/G8146Z VARIABLE SPEED VERTICAL METAL CUTTING BANDSAW OWNER'S MANUAL**

COPYRIGHT © JANUARY, 2008 BY GRIZZLY INDUSTRIAL, INC., REVISED JUNE, 2011 (TS)  
**WARNING: NO PORTION OF THIS MANUAL MAY BE REPRODUCED IN ANY SHAPE  
OR FORM WITHOUT THE WRITTEN APPROVAL OF GRIZZLY INDUSTRIAL, INC.**  
(FOR MODELS MANUFACTURED SINCE 6/11) #TS10085 PRINTED IN TAIWAN

## **WARNING!**

**This manual provides critical safety instructions on the proper setup, operation, maintenance, and service of this machine/tool. Save this document, refer to it often, and use it to instruct other operators.**

**Failure to read, understand and follow the instructions in this manual may result in fire or serious personal injury—including amputation, electrocution, or death.**

**The owner of this machine/tool is solely responsible for its safe use. This responsibility includes but is not limited to proper installation in a safe environment, personnel training and usage authorization, proper inspection and maintenance, manual availability and comprehension, application of safety devices, cutting/sanding/grinding tool integrity, and the usage of personal protective equipment.**

**The manufacturer will not be held liable for injury or property damage from negligence, improper training, machine modifications or misuse.**

## **WARNING!**

**Some dust created by power sanding, sawing, grinding, drilling, and other construction activities contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:**

- **Lead from lead-based paints.**
- **Crystalline silica from bricks, cement and other masonry products.**
- **Arsenic and chromium from chemically-treated lumber.**

**Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: Work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.**

# INTRODUCTION

---

---

## Foreword

---

---

We are proud to offer the Model G8144Z/G8145Z/G8146Z Variable Speed Vertical Metal Cutting Bandsaw. This machine is part of a growing Grizzly family of fine metalworking machinery. When used according to the guidelines set forth in this manual, you can expect years of trouble-free, enjoyable operation and proof of Grizzly's commitment to customer satisfaction.

The specifications, drawings, and photographs illustrated in this manual represent the Model G8144Z/G8145Z/G8146Z when the manual was prepared. However, owing to Grizzly's policy of continuous improvement, changes may be made at any time with no obligation on the part of Grizzly.

For your convenience, we always keep current Grizzly manuals available on our website at **www.grizzly.com**. Any updates to your machine will be reflected in these manuals as soon as they are complete. Visit our site often to check for the latest updates to this manual!

## MODEL G8144Z 12" VS VERTICAL METAL-CUTTING BANDSAW WITH INVERTER

### Product Dimensions:

Weight..... 495 lbs.  
 Width (side-to-side) x Depth (front-to-back) x Height..... 33-7/16 x 21-1/4 x 59-7/16 in.  
 Footprint (Length x Width)..... 28-5/8 x 15 in.

### Shipping Dimensions:

Type..... Wood & Cardboard  
 Content..... Machine  
 Weight..... 566 lbs.  
 Length x Width x Height..... 33 x 24 x 68 in.

### Electrical:

Power Requirement..... 220V, Single-Phase, 60 Hz  
 Minimum Circuit Size..... 15 amp  
 Switch..... ON/OFF Push Button  
 Switch Voltage..... 220V  
 Cord Length..... 6-1/2 ft.  
 Cord Gauge..... 14 guage  
 Plug Included..... No

### Motors:

#### Grinder

Type..... ODP  
 Horsepower..... 1/8 HP  
 Voltage..... 220V  
 Phase..... Single  
 Amps..... 0.6A  
 Speed..... 3450 RPM  
 Cycle..... 60 Hz  
 Number of Speeds..... 1  
 Power Transfer..... Direct Drive  
 Bearings..... Sealed and Lubricated

#### Bandsaw

Type..... TEFC Capacitor Start Induction  
 Horsepower..... 1 HP  
 Voltage..... 220V  
 Phase..... Three  
 Amps..... 3.3A  
 Speed..... 1725 RPM  
 Cycle..... 60 Hz  
 Number of Speeds..... 1  
 Power Transfer..... Belt Drive  
 Bearings..... Shielded and Permanently Lubricated

**Main Specifications:**

**Operation Info**

Blade Speeds..... 104 - 1300 FPM  
Std. Blade Length..... 94-1/4 - 98-1/4 in.  
Blade Size Range..... 1/8 - 3/8 in.

**Cutting Capacities**

Cutting Height..... 5-1/8 in.  
Cutting Capacity Left of Blade..... 12-3/16 in.

**Construction**

Table..... Precision Ground Cast Iron  
Upper Wheel..... Fully-Balanced Cast Iron  
Lower Wheel..... Fully-Balanced Cast Iron  
Tire..... Rubber  
Body..... Cast Iron  
Base..... Pre-formed Steel  
Wheel Cover..... Pre-formed Steel  
Paint..... Powder Coated

**Other**

Wheel Size..... 12 in.  
Blade Guides Upper..... Tungsten Steel  
Blade Guides Lower..... Tungsten Steel  
Electric Blade Welder..... 220V, 1.2 KVA  
Blade Welding Station Voltage..... 220V  
Annealing Voltage..... 220V  
Mobile Base..... G7314Z

**Table Info**

Table Tilt..... Left 15, Right 45 deg.  
Table Size Length..... 22-1/8 in.  
Table Size Width..... 18-1/8 in.  
Table Size Thickness..... 1-5/8 in.  
Floor To Cutting Area Height..... 34-5/8 in.

**Other Specifications:**

Country Of Origin ..... Taiwan  
Warranty ..... 1 Year  
Serial Number Location ..... ID Tag on Upper Wheel Cover  
Assembly Time ..... 60 minutes

**Features:**

- Station for Joining Blade Ends
- Includes Cut-Off Blades, Electric Welder w/Clamp, Annealer and Grinder
- Variable Cutting Speeds w/Digital Read-Out
- Lower Wheel Cleaning Brush
- Work Light

## MODEL G8145Z 14-1/8" VS VERTICAL METAL-CUTTING BANDSAW WITH INVERTER

### Product Dimensions:

Weight..... 660 lbs.  
Width (side-to-side) x Depth (front-to-back) x Height..... 37 x 15-1/8 x 62-5/8 in.  
Footprint (Length x Width)..... 28 x 16-1/2 in.

### Shipping Dimensions:

Type..... Wood and Cardboard  
Content..... Machine  
Weight..... 774 lbs.  
Length x Width x Height..... 33 x 24 x 76 in.

### Electrical:

Power Requirement..... 220V, Single-Phase, 60 Hz  
Minimum Circuit Size..... 15 amp  
Switch..... ON/OFF Push Button  
Switch Voltage..... 220V  
Cord Length..... 6-1/2 ft.  
Cord Gauge..... 14 guage  
Plug Included..... No

### Motors:

#### Grinder

Type..... ODP  
Horsepower..... 1/8 HP  
Voltage..... 110V  
Phase..... Single  
Amps..... 0.6A  
Speed..... 3450 RPM  
Cycle..... 60 Hz  
Number of Speeds..... 1  
Power Transfer ..... Direct Drive  
Bearings..... Sealed and Lubricated

#### Bandsaw

Type..... TEFC Capacitor Start Induction  
Horsepower..... 1-1/2 HP  
Voltage..... 220V  
Phase..... Three  
Amps..... 5.1A  
Speed..... 1725 RPM  
Cycle..... 60 Hz  
Number of Speeds..... 1  
Power Transfer ..... Belt Drive  
Bearings..... Shielded and Permanently Lubricated

**Main Specifications:**

**Operation Info**

Blade Speeds..... 108 - 1800 FPM  
Std. Blade Length..... 105 - 110 in.  
Blade Size Range..... 1/8 - 1/2 in.

**Cutting Capacities**

Cutting Height..... 7-1/2 in.  
Cutting Capacity Left of Blade..... 14-3/16 in.

**Construction**

Table..... Precision Ground Cast Iron  
Upper Wheel..... Fully-Balanced Cast Iron  
Lower Wheel..... Fully-Balanced Cast Iron  
Tire..... Rubber  
Body..... Cast Iron  
Base..... Pre-formed Steel  
Wheel Cover..... Pre-formed Steel  
Paint..... Powder Coated

**Other**

Wheel Size..... 14 in.  
Blade Guides Upper..... Tungsten Steel  
Blade Guides Lower..... Tungsten Steel  
Electric Blade Welder..... 110V, 2.0 KVA  
Blade Welding Station Voltage..... 110V  
Annealing Voltage..... 110V  
Mobile Base..... G7314Z

**Table Info**

Table Tilt..... Left 15, Right 45 deg.  
Table Size Length..... 21-5/16 in.  
Table Size Width..... 19-3/4 in.  
Table Size Thickness..... 2 in.  
Floor To Cutting Area Height..... 35 in.

**Other Specifications:**

Country Of Origin ..... Taiwan  
Warranty ..... 1 Year  
Serial Number Location ..... ID Tag on Upper Wheel Cover  
Assembly Time ..... 60 minutes

**Features:**

- Station for Joining Blade Ends
- Includes Cut-Off Blades, Electric Welder w/Clamp, Annealer and Grinder
- Variable Cutting Speed w/Digital Read-Out
- Lower Wheel Cleaning Brush
- Work Light

## MODEL G8146Z 15-3/4" VS VERTICAL METAL-CUTTING BANDSAW WITH INVERTER

### Product Dimensions:

Weight..... 914 lbs.  
Width (side-to-side) x Depth (front-to-back) x Height..... 36-3/8 x 19-1/8 x 17-7/8 in.  
Footprint (Length x Width)..... 40-1/8 x 27-9/16 in.

### Shipping Dimensions:

Type..... Wood and Cardboard  
Content..... Machine  
Weight..... 1020 lbs.  
Length x Width x Height..... 41-3/4 x 31-1/2 x 79-3/4 in.

### Electrical:

Power Requirement..... 220V, Single-Phase, 60 Hz  
Minimum Circuit Size..... 15 amp  
Switch..... ON/OFF Push Button w/Safety Lockout Key  
Switch Voltage..... 220V  
Cord Length..... 6-1/2 ft.  
Cord Gauge..... 14 guage  
Plug Included..... No

### Motors:

#### Grinder

Type..... ODP  
Horsepower..... 1/8 HP  
Voltage..... 220V  
Phase..... Split  
Amps..... 0.6A  
Speed..... 3450 RPM  
Cycle..... 60 Hz  
Number of Speeds..... 1  
Power Transfer..... Direct Drive  
Bearings..... Sealed and Lubricated

#### Bandsaw

Type..... TEFC  
Horsepower..... 2 HP  
Voltage..... 220V  
Phase..... Three  
Amps..... 6.6A  
Speed..... 1725 RPM  
Cycle..... 60 Hz  
Number of Speeds..... 1  
Power Transfer..... Belt Drive  
Bearings..... Shielded and Permanently Lubricated

**Main Specifications:**

**Operation Info**

Blade Speeds.....	105 - 2100 FPM
Std. Blade Length.....	133 - 136 in.
Blade Size Range.....	1/8 - 3/4 in.

**Cutting Capacities**

Cutting Height.....	10-1/4 in.
Cutting Capacity Left of Blade.....	15-3/4 in.

**Construction**

Table.....	Precision Ground Cast Iron
Upper Wheel.....	Fully-Balanced Cast Iron
Lower Wheel.....	Fully-Balanced Cast Iron
Tire.....	Rubber
Body.....	Cast Iron
Base.....	Pre-formed Steel
Wheel Cover.....	Pre-formed Steel
Paint.....	Powder Coated

**Other**

Wheel Size.....	16 in.
Blade Guides Upper.....	Tungsten Steel
Blade Guides Lower.....	Tungsten Steel
Electric Blade Welder.....	220V, 4.2 KVA
Blade Welding Station Voltage.....	220V
Annealing Voltage.....	220V
Mobile Base.....	G7315Z

**Table Info**

Table Tilt.....	Left 15, Right 45 deg.
Table Size Length.....	23-5/8 in.
Table Size Width.....	21-11/16 in.
Table Size Thickness.....	2 in.
Floor To Cutting Area Height.....	38 in.

**Other Specifications:**

Country Of Origin .....	Taiwan
Warranty .....	1 Year
Serial Number Location .....	ID Tag on Upper Wheel Cover
Assembly Time .....	60 minutes

**Features:**

- Station for Joining Blade Ends
- Includes Cut-Off Blades
- Includes Electric Welder w/Clamp, Annealer and Grinder
- Variable Cutting Speeds w/Digital Read-Out
- Lower Wheel Cleaning Brush
- Work Light

# SECTION 1: SAFETY

## WARNING

### For Your Own Safety, Read Instruction Manual Before Operating this Machine

The purpose of safety symbols is to attract your attention to possible hazardous conditions. This manual uses a series of symbols and signal words intended to convey the level of importance of the safety messages. The progression of symbols is described below. Remember that safety messages by themselves do not eliminate danger and are not a substitute for proper accident prevention measures.

Indicates an imminently hazardous situation which, if not avoided, **WILL** result in death or serious injury.

Indicates a potentially hazardous situation which, if not avoided, **COULD** result in death or serious injury.

Indicates a potentially hazardous situation which, if not avoided, **MAY** result in minor or moderate injury. It may also be used to alert against unsafe practices.

**NOTICE**

This symbol is used to alert the user to useful information about proper operation of the machine.

## WARNING

### Safety Instructions for Machinery

**OWNER'S MANUAL.** Read and understand this owner's manual **BEFORE** using machine. Untrained users can be seriously hurt.

**EYE PROTECTION.** Always wear ANSI-approved safety glasses or a face shield when operating or observing machinery. to reduce the risk of eye injury or blindness from flying particles Everyday eyeglasses are not approved safety glasses.

**HAZARDOUS DUST.** Dust created while using machinery may cause cancer, birth defects, or long-term respiratory damage. Be aware of dust hazards associated with each workpiece material, and always wear a NIOSH-approved respirator to reduce your risk.

**WEARING PROPER APPAREL.** Do not wear clothing, apparel, or jewelry that can become entangled in moving parts. Always tie back or cover long hair. Wear non-slip footwear to avoid accidental slips which could cause a loss of workpiece control.

**HEARING PROTECTION.** Always wear hearing protection when operating or observing loud machinery. Extended exposure to this noise without hearing protection can cause permanent hearing loss.

**MENTAL ALERTNESS.** Be mentally alert when running machinery. Never operate under the influence of drugs or alcohol, when tired, or when distracted.

# WARNING

## Safety Instructions for Machinery

**DISCONNECTING POWER SUPPLY.** Always disconnect machine from power supply before servicing, adjusting, or changing cutting tools (bits, blades, cutters, etc.). Make sure switch is in OFF position before reconnecting to avoid an unexpected or unintentional start.

**INTENDED USE.** Only use the machine for its intended purpose and only use recommended accessories. Never stand on machine, modify it for an alternative use, or outfit it with non-approved accessories.

**STABLE MACHINE.** Unexpected movement during operations greatly increases the risk of injury and loss of control. Verify machines are stable/secure and mobile bases (if used) are locked before starting.

**FORCING MACHINERY.** Do not force machine. It will do the job safer and better at the rate for which it was designed.

**GUARDS & COVERS.** Guards and covers can protect you from accidental contact with moving parts or flying debris. Make sure they are properly installed, undamaged, and working correctly before using machine.

**REMOVING TOOLS.** Never leave adjustment tools, chuck keys, wrenches, etc. in or on machine—especially near moving parts. Verify removal before starting!

**AWKWARD POSITIONS.** Keep proper footing and balance at all times when operating machine. Do not overreach! Avoid awkward hand positions that make workpiece control difficult or increase the risk of accidental injury.

**DANGEROUS ENVIRONMENTS.** Do not use machinery in wet locations, cluttered areas, around flammables, or in poorly-lit areas. Keep work area clean, dry, and well lighted to minimize risk of injury.

**APPROVED OPERATION.** Untrained operators can be seriously hurt by machinery. Only allow trained or properly supervised people to use machine. When machine is not being used, disconnect power, remove switch keys, or lock-out machine to prevent unauthorized use—especially around children. Make workshop kid proof!

**CHILDREN & BYSTANDERS.** Keep children and bystanders a safe distance away from work area. Stop using machine if children or bystanders become a distraction.

**FEED DIRECTION.** Unless otherwise noted, feed work against the rotation of blades or cutters. Feeding in the same direction of rotation may pull your hand into the cut.

**SECURING WORKPIECE.** When required, use clamps or vises to secure workpiece. A secured workpiece protects hands and frees both of them to operate the machine.

**UNATTENDED OPERATION.** Never leave machine running while unattended. Turn machine **OFF** and ensure all moving parts completely stop before walking away.

**MAINTENANCE & INSPECTION.** A machine that is not properly maintained may operate unpredictably. Follow all maintenance instructions and lubrication schedules to keep machine in good working condition. Regularly inspect machine for loose bolts, alignment of critical parts, binding, or any other conditions that may affect safe operation. Always repair or replace damaged or mis-adjusted parts before operating machine.

**EXPERIENCING DIFFICULTIES.** If at any time you are experiencing difficulties performing the intended operation, stop using the machine! Contact our Technical Support Department at (570) 546-9663.

## **WARNING**

# Safety Instructions for Metal Cutting Bandsaws

- 1. BLADE CONDITION.** Do not operate with dull, cracked or badly worn blade that can break during operation or decrease the performance of the bandsaw. Inspect blades for cracks and missing teeth before each use.
- 2. BLADE REPLACEMENT.** Wear gloves to protect hands and safety glasses to protect eyes when replacing the blade. When replacing blades, make sure teeth face forward and down toward the table in the direction of blade travel.
- 3. WORKPIECE HANDLING.** Your hands can be drawn into the blade during operation if the workpiece moves unexpectedly. Always keep your hands a safe distance away from the moving blade.
- 4. FIRE HAZARD.** Use **EXTREME CAUTION** if cutting magnesium. Using the wrong cutting fluid will lead to chip fire and possible explosion.
- 5. WELDING AND GRINDING SAFETY.** The welding station represents a serious hazard. **DO NOT** touch any metal parts of the blade, welder, or machine when activating the welder. Keep your hands a safe distance away from the grinding wheel when in use.
- 6. HOT SURFACES.** Be aware that touching hot workpieces or chips after welding, grinding, or cutting can cause burns.
- 7. CUTTING FLUID SAFETY.** Cutting fluids are poisonous. Always follow manufacturer's cutting-fluid safety instructions. Pay particular attention to contact, contamination, inhalation, storage and disposal warnings. Spilled cutting fluid invites slipping hazards.
- 8. ENTANGLEMENT HAZARDS.** Always keep the blade guard correctly positioned and wheel doors closed and secured when bandsaw is in operation. Loose clothing, jewelry, long hair and work gloves can be drawn into working parts.
- 9. MAINTENANCE/SERVICE.** All inspections, adjustments, and maintenance are to be done with the power **OFF** and the plug pulled from the outlet. Wait for all moving parts to come to a complete stop.
- 10. UNSTABLE WORKPIECES.** Workpieces that cannot be supported or stabilized without a vise or jig should not be cut on a vertical metal-cutting bandsaw, because they can unexpectedly move while cutting and draw the operator's hands into the blade causing serious personal injury. Examples are chains, cables, round or oblong-shaped workpieces, workpieces with internal or built-in moving or rotations parts, etc.
- 11. EXPERIENCING DIFFICULTY.** If at any time you are experiencing difficulties performing the intended operation, stop using the machine! Contact our Technical Support Department at (570) 546-9663.

## **CAUTION**

**No list of safety guidelines can be complete. Every shop environment is different. Always consider safety first, as it applies to your individual working conditions. Use this and other machinery with caution and respect. Failure to do so could result in serious personal injury, damage to equipment, or poor work results.**

# SECTION 2: CIRCUIT REQUIREMENTS

## 220V Operation

### **!WARNING**

Serious personal injury could occur if you connect the machine to power before completing the setup process. **DO NOT** connect the machine to the power until instructed later in this manual.

### **!WARNING**

Electrocution or fire could result if machine is not grounded and installed in compliance with electrical codes. Compliance **MUST** be verified by a qualified electrician!

### Full Load Amperage Draw

G8144Z Motor Draw at 220V ..... 5 Amps  
G8145Z Motor Draw at 220V ..... 6 Amps  
G8146Z Motor Draw at 220V ..... 7 Amps

### Circuit Requirements

You **MUST** connect your machine to a grounded circuit that is rated for the amperage given below. Never replace a circuit breaker on an existing circuit with one of higher amperage without consulting a qualified electrician to ensure compliance with wiring codes. **If you are unsure about the wiring codes in your area or you plan to connect your machine to a shared circuit, consult a qualified electrician.**

Minimum 220V Circuit (All Models) ..... 15 Amps

### Power Connection Device

The type of plug required to connect your machine to power depends on the type of service you currently have or plan to install. We recommend using the plug shown in **Figure 6**.

**Figure 6.** NEMA 6-15 plug and receptacle.

### Extension Cords

Using extension cords may reduce the life of the motor. Instead, place the machine near a power source. If you must use an extension cord:

- Use at least a 14 gauge cord that does not exceed 50 feet in length!
- The extension cord must also have a ground wire and plug pin.
- A qualified electrician **MUST** size cords over 50 feet long to prevent motor damage.

# SECTION 3: SETUP

## Setup Safety

**! WARNING**  
This machine presents serious injury hazards to untrained users. Read through this entire manual to become familiar with the controls and operations before starting the machine!

**! WARNING**  
Wear safety glasses or a face shield during the entire setup process!

**! WARNING**  
This machine and its components are very heavy. Get lifting help and use power lifting equipment such as a forklift to move heavy items.

## Items Needed for Setup

The following items are needed to complete the setup process, but are not included with your machine:

Description	Qty
• Assistants .....	2
• Safety Glasses (for each person) .....	1
• Lifting Straps (rated for 1000 lbs.) .....	As Needed
• Forklift (rated for 1000 lbs.) .....	1
• Floor Mounting Hardware .....	As Needed

## Unpacking

Your machine was carefully packaged for safe transportation. Remove the packaging materials from around your machine and inspect it. If you discover the machine is damaged, *please immediately call Customer Service at (570) 546-9663 for advice.*

Save the containers and all packing materials for possible inspection by the carrier or its agent. *Otherwise, filing a freight claim can be difficult.*

# Clean Up

The unpainted surfaces are coated with a waxy oil to prevent corrosion during shipment. Remove this protective coating with a solvent cleaner or citrus-based degreaser such as Grizzly's G7895 Citrus Degreaser. To clean thoroughly, some parts must be removed. **For optimum performance from your machine, clean all moving parts or sliding contact surfaces.** Avoid chlorine-based solvents, such as acetone or brake parts cleaner that may damage painted surfaces. Always follow the manufacturer's instructions when using any type of cleaning product.

**! WARNING**  
Gasoline and petroleum products have low flash points and can explode or cause fire if used to clean machinery. **DO NOT** use these products to clean the machinery.

**! CAUTION**  
Many cleaning solvents are toxic if inhaled. Minimize your risk by only using these products in a well ventilated area.

## G2544—Solvent Cleaner & Degreaser

A great product for removing the waxy shipping grease from your machine during clean up.

Call  
**1-800-523-4777**  
To Order

**Figure 7.** Cleaner/degreaser available from Grizzly.

# Site Considerations

## Floor Load

Refer to the **Machine Data Sheet** (starting on **Page 3**) for the weight and footprint specifications of your machine. Some floors may require additional reinforcement to support both the machine and operator.

## Placement Location

Consider existing and anticipated needs, size of material to be processed through each machine, and space for auxiliary stands, work tables or other machinery when establishing a location for your new machine. See **Figures 8–9** for the minimum working clearances.

**Figure 8.** Minimum horizontal working clearances (top view).

	A	B	C	D
<b>G8144Z</b>	21 <sup>1</sup> / <sub>4</sub> "	33 <sup>7</sup> / <sub>16</sub> "	15"	28 <sup>5</sup> / <sub>16</sub> "
<b>G8145Z</b>	15 <sup>1</sup> / <sub>8</sub> "	37"	16 <sup>1</sup> / <sub>2</sub> "	28"
<b>G8146Z</b>	19 <sup>1</sup> / <sub>8</sub> "	36 <sup>3</sup> / <sub>8</sub> "	27 <sup>9</sup> / <sub>16</sub> "	40 <sup>1</sup> / <sub>8</sub> "

**Figure 9.** Minimum working clearance dimensions.

# Mounting to Shop Floor

The bandsaw center of gravity is above the middle of the machine. Although not required, we strongly recommend that you mount your new machine to the floor to prevent tipping. Because this is an optional step and floor materials may vary, floor mounting hardware is not included.

## Bolting to Concrete Floors

Anchor studs and lag bolts (Figure 10) are two popular methods for anchoring an object to a concrete floor. We suggest you research the many options and methods for mounting your machine and choose the best that fits your specific application.

### NOTICE

Anchor studs are stronger and more permanent alternatives to lag bolts; however, they will stick out of the floor, which may cause a tripping hazard if you decide to move your machine.

Figure 10. Typical fasteners for mounting to concrete floors.

### NOTICE

We strongly recommend securing your machine to the floor if it is hardwired to the power source. Consult with your electrician to ensure compliance with local codes.

# Moving & Placing

## To lift and move the bandsaw:

1. Position lifting straps under the head of the bandsaw and on the forklift forks, as shown in Figure 11.

Figure 11. Lifting straps positioned on bandsaw and forklift forks.

### WARNING

Only use lifting straps and power lifting equipment rated for at least 1000 lbs., and in good working condition. If the bandsaw should fall or tip over while moving it, serious personal injury and property damage could result.

2. Unbolt the bandsaw from the pallet.
3. With two assistants to steady the bandsaw, slowly lift it just enough to clear the pallet and floor obstacles, then move it to the prepared location.
4. Use shims between the machine mounting flanges and the floor to level the bandsaw.

**Note:** *Tighten the mounting fasteners evenly to avoid warping or cracking the cast iron base.*

## Test Run

---

---

Once the bandsaw is in place, test run your machine to make sure it runs properly and is ready for regular operation. The test run consists of verifying the following: 1) The bandsaw motor powers up and runs correctly, and 2) the stop button safety feature works correctly.

If, during the test run, you cannot easily locate the source of an unusual noise or vibration, stop using the machine immediately, then review **Troubleshooting on Page 39**.

If you cannot find a remedy, contact our Tech Support at (570) 546-9663 for assistance.

### To test run the bandsaw:

1. Read and follow the safety instructions at the beginning of the manual, and make sure the machine is setup properly.
2. Clear all tools and objects used during setup away from the machine.
3. Make sure the blade is properly tensioned and the blade guides are positioned correctly (refer to **Blade Tensioning on Page 29**, and **Adjusting Blade Guides on Page 31** for detailed instructions).
4. Connect the machine to the power source.

### 5. Model G8146Z only:

- a. Place the key in the Power Switch and turn it to the ON position—the Power Lamp should light.
- b. Push the Emergency Stop button in, then twist it clockwise so it pops out. When the Emergency Stop button pops out, the switch is reset and ready for operation.
- c. Push the Start button to turn the machine **ON**.

### 6. Models G8144Z & G8145Z only:

7. Verify that the machine is operating correctly.

—When operating correctly, the machine runs smoothly with little or no vibration or rubbing noises.

—Investigate and correct strange or unusual noises or vibrations before operating the machine further. Always disconnect the machine from power when investigating or correcting potential problems.

### 8. Verify that the motor is running in the correct direction.

—When the motor is running in the correct direction, the blade will be moving down into the table.

—If the motor is NOT running in the correct direction, stop the machine, disconnect the machine from power, and switch any two incoming power leads inside the motor wiring junction box (refer to the **Model G8144Z/G8145Z Control Panel & Inverter Wiring Diagram on Page 46**, or the **Model G8146Z Inverter Wiring Diagram on Page 49** for detailed illustrations).

*Continued on next page* 

## 9. Model G8146Z only:

- a. Press the Emergency Stop button to stop the machine.
- b. WITHOUT resetting the switch, press the Start button. The machine should not start.

—If the machine does not start, the Emergency Stop button safety feature is working correctly.

—If the machine does start (with the stop button pushed in), immediately disconnect power to the machine. The Emergency Stop button safety feature is not working correctly. This safety feature must work properly before proceeding with regular operations. Call Tech Support for help.

- c. Reset the Emergency Stop button by twisting it clockwise until it pops out.
- d. Turn the Power Switch key to the OFF position—the Power Lamp should go out.
- e. Press the Start button.

—If the machine does not start, the Power Switch safety feature is working correctly.

—If the machine does start with the Power Switch key turned to the OFF position, immediately disconnect power to the machine. The Power Switch safety feature is not working correctly. This safety feature must work properly before proceeding with regular operations. Call Tech Support for help.

# SECTION 4: OPERATIONS

## Operation Safety

### **!WARNING**

Damage to your eyes and lungs could result from using this machine without proper protective gear. Always wear safety glasses and a respirator when operating this machine.

### **!WARNING**

Loose hair and clothing could get caught in machinery and cause serious personal injury. Keep loose clothing and long hair away from moving machinery.

### **NOTICE**

If you have never used this type of machine or equipment before, WE STRONGLY RECOMMEND that you read books, trade magazines, or get formal training before beginning any projects. Regardless of the content in this section, Grizzly Industrial will not be held liable for accidents caused by lack of training.

## Basic Controls

Use the descriptions and figures below to become familiar with the basic controls of your bandsaw.

### Model G8144Z/G8145Z

**Digital Speed Display:** Shows the blade speed in feet per minute (FPM).

**Variable Speed Control:** Adjusts the blade speed between 104–1300 FPM (Model G8144Z) or 108–1800 FPM (Model G8145Z).

Figure 12. Model G8144Z/G8145Z electrical controls.

**Blade Welding Station:** Welds two blade ends to make a continuous loop when repairing a broken blade, fabricating a new blade, or making internal contour cuts.

**Bandsaw Start/Stop Switch:** Turns power ON/OFF to the bandsaw motor.

**Blade Tensioning Handwheel:** Increases/decreases blade tension when rotated.

**Blade Post Lock Knob:** Secures the blade post and upper blade guide assembly in position.

Figure 13. Model G8144Z/G8145Z blade controls.

## Model G8146Z

**Digital Speed Display:** Shows blade speed in feet per minute (FPM).

**Variable Speed Control:** Adjusts the blade speed between 105–2100 FPM.

**Blade Welding Station:** Welds two blade ends to make a continuous loop when repairing a broken blade, fabricating a new blade, or making internal contour cuts.

Figure 14. Model G8146Z electrical controls.

**Power Switch:** The main power switch for the entire machine.

**Power Lamp:** Lights when the Power Switch is turned **ON** and there is power to the machine.

**ON Button:** Turns the bandsaw motor **ON**.

**Emergency Stop Button:** Turns the bandsaw motor **OFF**.

Figure 15. Model G8146Z blade controls.

**Blade Post Lock Knob:** Secures the blade post and upper blade guide assembly in position.

**Blade Guide Elevation Handwheel:** Raises/lowers the blade post and upper blade guide assembly when rotated.

**Blade Tensioning Handwheel:** Increases/decreases blade tension when rotated.

# Blade Selection

Selecting the right blade for the cut requires a knowledge of various blade characteristics.

## Blade Terminology

Figure 16. Bandsaw blade terminology.

- A. Kerf:** The amount of material removed by the blade during cutting.
- B. Tooth Set:** The amount each tooth is bent left or right from the blade.
- C. Gauge:** The thickness of the blade.
- D. Blade Width:** The widest point of the blade measured from the tip of the tooth to the back edge of the blade.
- E. Tooth Rake:** The angle of the tooth face from a line perpendicular to the length of the blade.
- F. Gullet Depth:** The distance from the tooth tip to the bottom of the curved area (gullet).
- G. Tooth Pitch:** The distance between tooth tips.
- H. Blade Back:** The distance between the bottom of the gullet and the back edge of the blade.
- I. TPI:** The number of teeth per inch measured from gullet to gullet.

## Blade Length

Measured by the blade circumference, blade lengths are usually unique to the brand of your bandsaw and the distance between the wheels.

Model	Blade Length Range
G8144Z.....	94 <sup>1</sup> / <sub>4</sub> "–98 <sup>1</sup> / <sub>4</sub> "
G8145Z.....	105"–110"
G8146Z.....	133"–136"

## Blade Width

Measured from the back of the blade to the tip of the blade tooth (the widest point), blade width is often the first consideration given to blade selection. Blade width dictates the largest and smallest curve that can be cut, as well as how accurately it can cut a straight line—generally the wider the blade, the straighter it will cut.

Model	Blade Width Range
G8144Z.....	<sup>1</sup> / <sub>8</sub> "– <sup>3</sup> / <sub>8</sub> "
G8145Z.....	<sup>1</sup> / <sub>8</sub> "– <sup>1</sup> / <sub>2</sub> "
G8146Z.....	<sup>1</sup> / <sub>8</sub> "– <sup>3</sup> / <sub>4</sub> "

Always pick the blade width that best suits your operation.

**Curve Cutting:** Use the chart in **Figure 17** to choose the correct blade for curve cutting. Determine the smallest radius curve that will be cut on your workpiece and use the corresponding blade width.

The list below shows the minimum radius that can be cut by common blade widths.

Width	Radius
<sup>1</sup> / <sub>8</sub> ".....	<sup>1</sup> / <sub>8</sub> "
<sup>3</sup> / <sub>16</sub> ".....	<sup>3</sup> / <sub>8</sub> "
<sup>1</sup> / <sub>4</sub> ".....	<sup>5</sup> / <sub>8</sub> "
<sup>3</sup> / <sub>8</sub> ".....	1 <sup>1</sup> / <sub>4</sub> "
<sup>1</sup> / <sub>2</sub> ".....	2 <sup>1</sup> / <sub>2</sub> "
<sup>5</sup> / <sub>8</sub> ".....	3 <sup>3</sup> / <sub>4</sub> "
<sup>3</sup> / <sub>4</sub> ".....	5 <sup>1</sup> / <sub>2</sub> "

Figure 17. Blade width radii.

## Tooth Set

Three common tooth sets are standard, wavy, and raker (see **Figure 18**), each removing material in a different manner to make the kerf in the workpiece.

**Figure 18.** Bandsaw tooth sets.

**Alternate:** An all-purpose arrangement of bending the teeth evenly left and right of the blade. Generally used for milder metals.

**Wavy:** Generally three or more teeth in a group that are bent one way, followed by a non-set tooth, and then a group bent the other way. Recommended for straight cuts in thin metals or thin-wall tubing.

**Raker:** Three teeth in a recurring group—one bent left, next one bent right, and then a non-set tooth. The raker set is ideal for most contour cuts.

## Tooth Type

The most common tooth types are described below and illustrated in **Figure 19**.

**Standard or Raker:** Equally spaced teeth set a "0" rake angle. Recommended for all purpose use.

**Figure 19.** Bandsaw blade tooth types.

**Variable Pitch (VP):** Varying gullet depth and tooth spacing, a "0" rake angle, excellent chip removing capacity, and smooth cutting.

**Variable Pitch with Positive Rake:** Varying gullet depth and tooth spacing, a positive rake angle, better chip formation, and aggressive cutting.

**Hook or Claw:** Wide gullets (round or flat), equally spaced teeth, positive rake angle, and fast cut with good surface finish.

**Skip or Skip Tooth:** Wide, flat gullets, a "0" rake angle, equally spaced teeth, and recommended for non-ferrous materials.

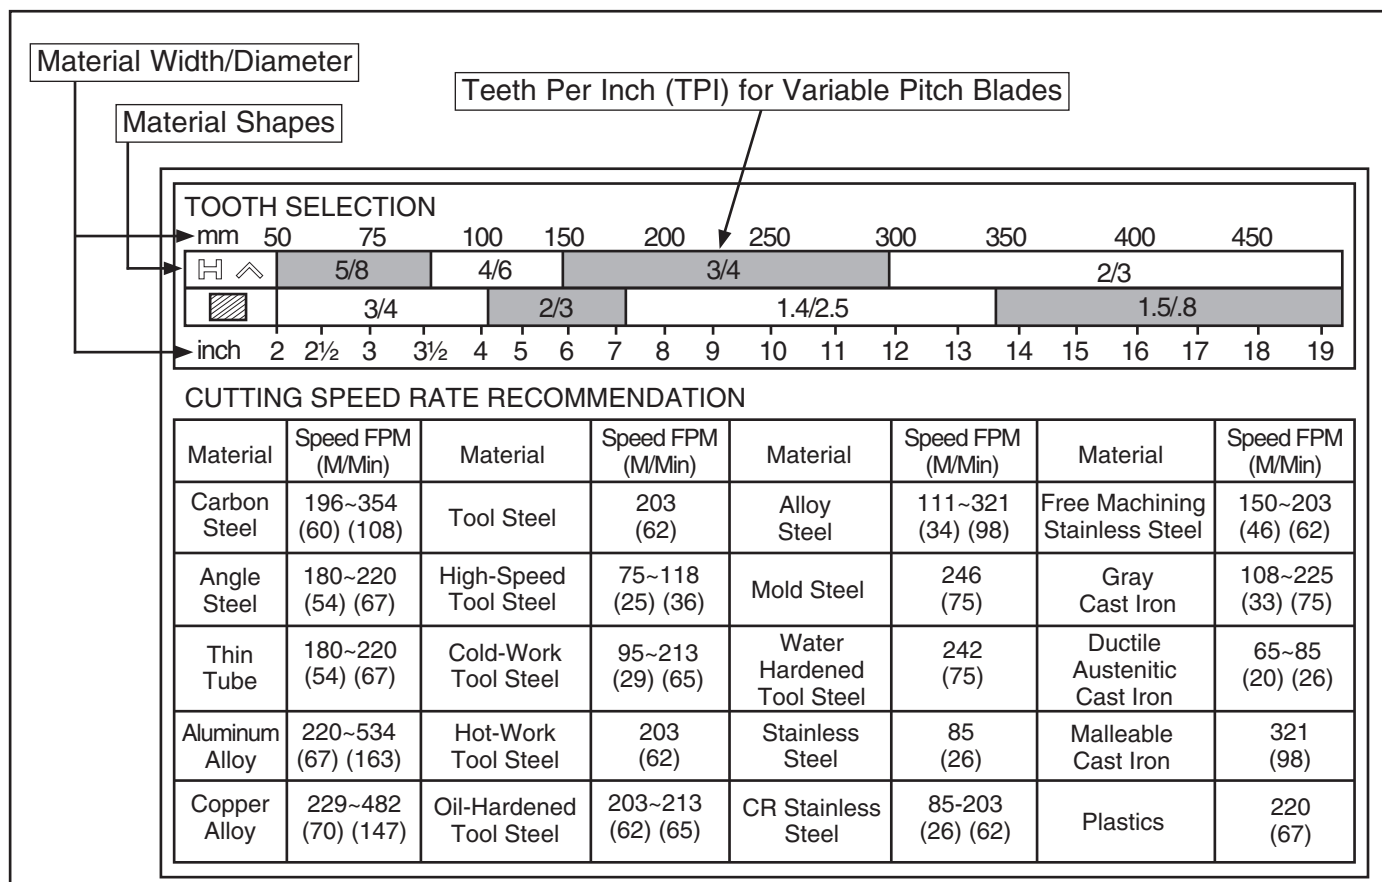

## Blade Pitch (TPI)

The chart below is a basic starting point for choosing teeth per inch (TPI) for variable tooth pitch blades and standard raker set bi-metal blades/HSS blades. However, for exact specifications of bandsaw blades that are correct for your operation, contact the blade manufacturer.

### To select the correct blade pitch:

1. Measure the material thickness. This measurement is the length of cut taken from where the tooth enters the workpiece, sweeps through, and exits the workpiece.
2. Refer to the "Material Width/Diameter" row of the blade selection chart in **Figure 20**, and read across to find the workpiece thickness you need to cut.

3. Refer to the "Material Shapes" row and find the shape of the material to be cut.
4. In the applicable row, read across to the right and find the box where the row and column intersect. Listed in the box is the minimum TPI recommended for the variable tooth pitch blades.
5. The "Cutting Speed Rate Recommendation" section of the chart offers guidelines for various metals, given in feet per minute (FPM). Choose the speed closest to the number shown in the chart.

**Figure 20.** General guidelines for blade selection and speed chart.

# Blade Breakage

---

Many conditions may cause a bandsaw blade to break. Blade breakage is unavoidable, in some cases, since it is the natural result of the peculiar stresses that bandsaw blades must endure. Blade breakage is also due to avoidable circumstances. Avoidable blade breakage is most often the result of poor care or judgement on the part of the operator when mounting or adjusting the blade or support guides.

## The most common causes of blade breakage are:

- Faulty alignment or adjustment of the blade guides.
- Forcing or twisting a wide blade around a short radius.
- Feeding the workpiece too fast.
- Dull or damaged teeth.
- Over-tensioned blade.
- Top blade guide assembly set too high above the workpiece. Adjust the top blade guide assembly so that there is approximately  $\frac{1}{8}$ "– $\frac{1}{4}$ " between the bottom of the assembly and the workpiece.
- Using a blade with a lumpy or improperly finished braze or weld.
- Continuously running the bandsaw when not in use.
- Leaving the blade tensioned when not in use.
- Using the wrong pitch (TPI) for the workpiece thickness. The general rule of thumb is to have not less than two teeth in contact with the workpiece at all times during cutting.

# Blade Care & Break-In

---

## Blade Care

A bandsaw blade is a delicate piece of steel that is subjected to tremendous strain. You can obtain longer use from a bandsaw blade if you give it fair treatment and always use the appropriate feed rate for your operation.

Be sure to select blades with the proper width, set, type, and pitch for each application. The wrong blades will produce unnecessary heat and shortens the life of the blade.

A clean blade will perform much better than a dirty blade. Dirty or gummed up blades pass through the cutting material with much more resistance than clean blades. This extra resistance also causes unnecessary heat.

## Blade Break-In

The sharp teeth tips and edges of a new blade are extremely sharp, and cutting at too fast of a feed rate fractures of the beveled edges of the teeth and causes premature blade wear.

### To properly break-in a new blade:

1. Choose the correct speed for the blade and material of the operation.
2. Reduce the feed pressure by half for the first 50–100 in<sup>2</sup> of material cut.
3. To avoid twisting the blade when cutting, adjust the feed pressure when the total width of the blade is in the cut.
4. Use the **Chip Inspection Chart** on **Page 27** to check the blade efficiency.

# Chip Inspection Chart

The best method of evaluating the performance of your cutting operation is to inspect the chips that are formed. Refer to the chart below for chip inspection guidelines.

Chip Appearance	Chip Description	Chip Color	Blade Speed	Feed Pressure	Additional Actions
	Thin & Curled	Silver	<i>Good</i>	<i>Good</i>	
	Hard, Thick & Short	Brown or Blue	Decrease	Decrease	Check Cutting Fluid Mix
	Hard, Strong & Thick	Brown or Blue	Decrease	Decrease	Check Cutting Fluid Mix
	Hard, Strong & Thick	Silver or Light Brown	<i>Good</i>	Decrease Slightly	Check Blade Pitch
	Hard & Thin	Silver	Increase	Decrease	Check Blade Pitch
	Straight & Thin	Silver	<i>Good</i>	Increase	
	Powdery	Silver	Decrease	Increase	
	Curled Tight & Thin	Silver	<i>Good</i>	Decrease	Check Blade Pitch

**Figure 21.** Chip inspection chart.

# Cutting Overview

The vertical metal cutting bandsaw has a flexible continuous blade that cuts in one direction. The type of bandsaw blade and the speed of the blade to be used depends on the workpiece material and the type of cut required.

This type of bandsaw can be used for straight cuts, angular cuts, and curved or contour cuts. Straight cuts are made using workpiece fixtures and with a light, even pressure against the blade. Angular cuts are made with the table and workpiece tilted at an angle other than "0".

When an internal contour cut is to be made, a hole must be drilled in the workpiece. The blade is then cut, fed through the hole in the workpiece, welded together again using the welding station, and re-installed on the bandsaw to make the cut. The welding station can also be used to fabricate new blades and repair broken blades.

The blade is supported by upper and lower tungsten steel blade guides that keep the blade from wandering during the cut.

The efficiency of the cutting operation can be easily checked by examining the form and color of the metal chips.

## **WARNING**

### **ELECTROCUTION HAZARD**

This bandsaw is not designed to be used with water soluble cutting fluid or coolant. If needed, use a small amount of oil-based lubricant.

# Blade Changes

## **WARNING**

Always disconnect power to the machine when changing blades. Failure to do this may result in serious personal injury.

## **CAUTION**

All saw blades are dangerous and may cause personal injury. To reduce the risk of being injured, wear leather gloves when handling saw blades.

### To replace the blade:

1. DISCONNECT BANDSAW FROM POWER!
2. Open the upper and lower wheel doors.
3. Release tension on the blade by rotating the tensioning handwheel.
4. Put on heavy gloves, then slide the blade off the upper and lower wheels, around the blade post, and through the table slit.
5. Install a new blade in reverse order.

## **WARNING**

Workpieces that cannot be supported or stabilized without a vise or jig should not be cut on a vertical metal-cutting bandsaw, because they can unexpectedly move while cutting and draw the operator's hands into the blade causing serious personal injury. Examples are chains, cables, round or oblong-shaped workpieces, workpieces with internal or built-in moving or rotations parts, etc.

- Position the back edge of the blade so that it is next to, but not against, the flange of the top wheel (see **Figure 22**).

**Note:** Excessive blade contact with the wheel flange during operation could lead to blade and wheel damage.

**Figure 22.** Back edge of blade next to wheel flange.

- Rotate the top wheel by hand several times to make sure the blade tracks evenly without wandering across the wheel surface.

**Note:** If the blade does wander across the wheel and away from the flange, the wheel alignment may need to be adjusted. Refer to **Wheel Alignment** on **Page 42** for detailed instructions.

- Re-tension the blade (refer to **Blade Tensioning** on **this page**).
- Check the upper and lower blade guides for clearance (refer to **Adjusting Blade Guides** on **Page 31**).

**Note:** Generally if the replacement blade is the same gauge, width, and type, blade guide adjustment is not necessary. Otherwise, you must adjust the blade guides.

- Close and secure the upper and lower wheel doors.

## Blade Tensioning

### **NOTICE**

To prolong blade life, release the tension on the blade if the machine will be idle for an extended period of time.

Proper blade tension reduces the risk of blade breakage and improves cutting performance.

#### To correctly tension the blade:

- DISCONNECT BANDSAW FROM POWER!
- Open the upper wheel door, and raise the blade post and upper blade guide assembly to the highest position.
- Check the side-to-side deflection of the blade midway between the upper blade guide and the table. The proper amount of deflection should be approximately  $\frac{3}{8}$ " when moderate pressure is applied (see **Figure 23**).

**Note:** The quickest and easiest way to check blade tension is to use the Model H5408 Blade Tensioning Gauge to reach a blade tension of 25,000–30,000 PSI (refer to **Page 36**)

**Figure 23.** Blade deflection when correctly tensioned.

4. Make small adjustments to the blade tensioning handwheel, then rotate the top wheel by hand several times before checking the blade deflection again. Repeat this step until you are satisfied.

**Note:** Make sure the blade tracks next to, but not touching, the upper wheel flange as you rotate the upper wheel by hand.

5. Close the upper wheel door and reposition the guide post.

## Guide Post

The guide post assembly is used for two purposes: 1) To properly position the blade guard to protect the operator from the exposed blade between the workpiece and the upper wheel housing, and 2) to position the upper blade guides close to the workpiece for blade support.

In order to cut accurately and safely, position the bottom of the upper blade guides approximately 1/4" above the workpiece—this positioning provides the greatest blade support and minimizes the amount of blade exposed to the operator during operation.

### To properly position the guide post:

1. DISCONNECT BANDSAW FROM POWER!
2. **Model G8144Z/G8145Z (Figure 24):**
  - a. Hold the guide post with one hand and loosen the guide post lock knob with the other.
  - b. Position the bottom of the upper blade guides approximately 1/4" above the workpiece, then re-tighten the lock knob to secure the setting.

Figure 24. Model G8144Z/G8145Z guide post assembly.

### 3. **Model G8146Z (Figure 25):**

- a. Loosen the guide post lock knob.
- b. Use the guide post elevation handwheel to position the bottom of the upper blade guides approximately 1/4" above the workpiece, then re-tighten the lock knob.

Figure 25. Model G8146Z guide post assembly.

# Adjusting Blade Guides

The blade guides provide side-to-side and back support to keep the blade straight while cutting. The blade guides and the back support have tungsten steel facing to reduce wear on the guides. Properly adjusted blade guides are essential to making accurate cuts.

**To properly adjust the upper and lower blade guides:**

1. DISCONNECT BANDSAW FROM POWER!
2. Make sure the bandsaw blade is properly tensioned (**Page 29**) and the blade post is in the correct position and locked.
3. Use a 6mm hex wrench to loosen the cap screws that secure the blade guide bracket and blade support (see **Figures 26–27**).

**Figure 26.** Upper blade guides and bracket.

**Figure 27.** Lower blade guides and bracket.

4. Position the blade guides so that they are approximately  $\frac{1}{16}$ " behind the tooth gullets (see **Figure 28**), then re-tighten the blade guide bracket cap screw.

**Figure 28.** Blade guides positioned approximately  $\frac{1}{16}$ " behind tooth gullets.

**Note:** The blade guards must be adjusted far enough back so that they are behind the tooth gullets when the blade is deflected back against the blade support.

- Slide the blade support (see **Figure 29**) up to, but not touching, the back of the blade, then re-tighten the blade support cap screw.

**Figure 29.** Blade guide assembly (upper assembly shown without blade for clarity).

- Rotate the upper wheel by hand so that the blade weld is between the blade guides.
- Use a 4mm hex wrench to loosen the blade guide cap screws (see **Figure 29**).
- Fold a crisp dollar bill in half and place it over the blade (between the blade guides and the blade), as shown in **Figure 30**.

**Figure 30.** Using a dollar bill to set blade guide spacing.

- Lightly pinch the dollar bill against the blade with the blade guides, re-position the air nozzle if necessary, then re-tighten the blade guide cap screws.

**Note:** The goal is to position the blade guides as close as possible to the blade without touching it during operation.

## Adjusting Table Tilt

To perform beveled cuts, the bandsaw table tilts 15° to the left and 45° to the right.

### To adjust the table tilt:

- DISCONNECT BANDSAW FROM POWER!
- Use a 23mm wrench to loosen the hex nut underneath the rear of the table (see **Figure 31**).

**Figure 31.** Table tilt scale and hex nut.

- Using the table tilt scale, adjust the angle of the table for your operation, then re-tighten the hex nut.

# Blade Welding

Being able to quickly and safely weld a bandsaw blade comes in handy for the following situations:

- To repair a broken blade that is still sharp and useful.
- To fabricate a new blade from a larger section of blade material to fit your bandsaw.
- To re-join a blade that has been purposely cut for making an internal contour cut.

Your metal cutting bandsaw is equipped with a blade welder that uses electrical resistance to heat and fuse the blade ends together. This process will leave the joint brittle, so it will need to be annealed to give it strength and flexibility.

## **⚠️ WARNING**

The electric current that flows through the blade welder during operation could cause serious personal injury or death. To avoid the risk of electrocution, never touch any metal part of the welding station during blade welding or annealing.

To weld the ends of bandsaw together:

1. Turn the bandsaw motor **OFF**.
2. Place the blade evenly against the back of the blade shear and firmly pull the handle down to square off the blade end (see **Figure 32**).

**Figure 32.** Using the blade shear to cut the blade.

**Note:** To make a proper blade weld, the ends of the blade must be evenly butted together during the welding process. If necessary, use the grinder to square up the ends or remove any teeth that are in the welding zone (see **Figures 33–34**).

**Figure 33.** Using the grinder to square up the blade end.

**Figure 34.** Blade ends and welding zone.

- Loosen the welding clamps by pulling the lock levers down.
- Position the back of one blade end evenly against the back of the welding clamp so that the end is midway between the two clamps, then rotate the lock lever all the way up to hold the blade end in place (see **Figure 35**).

**Figure 35.** Blade end properly position in welding clamp and locked in place.

- Set the clamping pressure dial (see **Figure 36**) to "0".

**Note:** As the blade material melts to form the weld, pressure is applied to the joint by the welding clamps. The correct amount of pressure is set with the clamping pressure dial in a later step.

**Figure 36.** Blade ends in correct position for welding.

- Place the other blade end in the opposite welding clamp and position it so that it evenly butts up against the opposing blade end, then lock it in place by rotating the lock lever all the way up, as shown in **Figure 36**.

**Note:** For a good blade weld, it is critical that the blade ends evenly butt up against each other.

- Use the chart in **Figure 37** and set the correct clamping pressure setting for the blade.

Blade Width	Pressure Setting
Up to 1/4"	1
1/4" to 3/8"	2-3
Above 3/8"	4+

**Figure 37.** Blade clamping pressure chart.

## ⚠ WARNING

Burning sparks from the blade welding operation may be thrown in all directions and could cause serious personal injury or fire. When using the blade welder, always protect yourself from the flying sparks and have fire extinguishing equipment readily available. **DO NOT** weld near flammables.

- Press and release—DO NOT hold—the welding button.

**Note:** There is a limit switch that senses the electrical resistance between the blade ends. If there is an adequate amount of welded material, the limit switch will not allow the welding button to activate the operation again.

9. Rotate the lock levers down to release the welding clamps, then rotate the clamping pressure dial to "0".
10. Inspect the weld. The welded joint should be even across the width of the blade with no gaps (see **Figure 38**).

**Figure 38.** Blade welded joint examples.

—If the weld is satisfactory, continue to **Step 11**.

—If the weld is NOT satisfactory, begin again at **Step 2**.

11. Set the clamping pressure dial to 4 or greater to bring the welding clamps close together.
12. Place the blade in the welding clamps with the weld centered between the clamps and re-tighten the lock levers.

**Note:** *The welding operation has left the blade joint brittle. Annealing will allow the material to cool in gradual manner, giving the weld strength and flexibility.*

13. Rapidly press and release—DO NOT hold—the annealing button two or three times until the weld zone turns dull red.
14. Repeat **Step 13** three to four more times, allowing the weld to cool for about 30 seconds between each repetition.

15. Allow the blade to cool, then re-inspect the weld.
16. Grind away the weld flash flat on the top and bottom of the joint so that the blade will run smoothly on the wheels.

**Note:** *Make sure not to grind the teeth or blade body, or overheat the blade during grinding—this will weaken the blade.*

17. Re-clamp the blade in the welding clamps with the joint centered, then repeat **Step 13** twice more.
18. Test the strength and flexibility of the weld by bending the blade in an arc similar to that of the bandsaw wheels. The blade should bend smoothly without any angles (see **Figure 39**).

**Figure 39.** Correct blade weld bend for strength and flexibility.

## **NOTICE**

**For good metal-to-metal contact between the welding clamps and the blade, make sure the blade material and the clamps are free from any debris or flash before each use.**

## H5408—Blade Tensioning Gauge

The Blade Tensioning Gauge ensures long blade life, reduced blade breakage, and straight cutting by indicating correct tension. A precision dial indicator provides you with a direct readout in PSI.

# SECTION 6: MAINTENANCE

## Schedule

For optimum performance from your machine, follow this maintenance schedule and refer to any specific instructions given in this section.

### Daily:

- Check/correct loose mounting bolts.
- Check/correct damaged or dull saw blade.
- Check/correct worn or damaged wires.
- Clean/protect table.
- Clean metal chips from upper and lower wheel areas, and empty bottom chip pan.
- Correct any other unsafe condition.

### Monthly:

- Check for V-belt tension, damage, or wear.
- Lubricate tension leadscrews and guide post rack.
- Remove the blade and clean the wheels.

## Cleaning

Use a brush and a shop vacuum to remove chips and other debris from the machine. Keep the table rust-free with regular applications of products like G96® Gun Treatment, SLIPIT®, or Boeshield® T-9 (see **Section 5: Accessories** on **Page 36** for more details).

Once a month, remove the blade and thoroughly clean all metal chips or built-up grease from the wheel surfaces. Redress the rubber tires if necessary.

When cleaning the wheel areas, empty and clean the chip pan (see **Figure 43**).

**Figure 43.** Lower wheel chip pan.

## Redressing Rubber Tires

As the bandsaw ages, the rubber tires on the wheel may need to be redressed if they become hardened or glazed over. Redressing the rubber tires improves blade tracking and reduces vibration/blade lead.

If the rubber tires become too worn, then blade tracking will become extremely difficult. At that point, redressing will no longer be effective, and the rubber tires must be replaced.

### To redress the rubber tires:

1. DISCONNECT BANDSAW FROM POWER!
2. Put on heavy gloves and remove the blade.
3. Use a brush and shop vacuum to clean any chips from the rubber tires.
4. Hold a piece of 100-grit sandpaper against the rubber tire and rotate the wheel by hand. Only redress the rubber enough to expose a fresh rubber surface.

# Lubrication

The bearings on your bandsaw are factory lubricated and sealed. Merely leave them alone unless they need to be replaced.

When needed, brush a light coat of multi-purpose grease on the tension leadscrew (all Models) and guide post rack (Model G8146Z only) to maintain smooth operation (see **Figures 44 & 45**).

If the table becomes difficult to tilt, position it so that you can brush a thin coat of multi-purpose grease on the trunnion surface (see **Figure 46**).

**Figure 46.** Table tilted to expose trunnion surface.

**Figure 44.** Model G8144Z/G8145Z tension leadscrew.

**Figure 45.** Model G8146Z tension leadscrew and guide post rack.

# SECTION 7: SERVICE

Review the troubleshooting and procedures in this section to fix or adjust your machine if a problem develops. If you need replacement parts or you are unsure of your repair skills, then feel free to call our Technical Support at (570) 546-9663.

## Troubleshooting

### Motor & Electrical

Symptom	Possible Cause	Possible Solution
Machine does not start or a breaker trips.	<ol style="list-style-type: none"> <li>1. Power switch key is removed or not in ON position (Model G8146Z only).</li> <li>2. Emergency stop push-button is engaged/faulty (Model G8146Z only).</li> <li>3. Plug/receptacle is at fault or wired incorrectly.</li> <li>4. Motor connection wired incorrectly.</li> <li>5. Wall fuse/circuit breaker is blown/tripped.</li> <li>6. Power supply switched OFF or is at fault.</li> <li>7. Wiring is open/has high resistance.</li> <li>8. Start/Stop switch is at fault (Model G8144Z/G8145Z).</li> <li>9. Inverter is at fault.</li> <li>10. Motor is at fault.</li> </ol>	<ol style="list-style-type: none"> <li>1. Install power switch key and turn it to the ON position.</li> <li>2. Rotate clockwise until it pops out; replace it if faulty.</li> <li>3. Test for good contacts; correct the wiring.</li> <li>4. Correct motor wiring connections (<b>Page 51</b>).</li> <li>5. Ensure circuit size is suitable for this machine; replace weak breaker.</li> <li>6. Ensure power supply is switched on; ensure power supply has the correct voltage.</li> <li>7. Check for broken wires or disconnected/corroded connections, and repair/replace as necessary.</li> <li>8. Replace Start/Stop switch.</li> <li>9. Replace inverter.</li> <li>10. Test/repair/replace.</li> </ol>
Machine stalls or is overloaded.	<ol style="list-style-type: none"> <li>1. Feeding workpiece too fast.</li> <li>2. Workpiece alignment is poor.</li> <li>3. Wrong workpiece material or blade.</li> <li>4. Blade is slipping on wheels.</li> <li>5. Motor connection is wired incorrectly.</li> <li>6. V-belt(s) slipping.</li> <li>7. Plug/receptacle is at fault.</li> <li>8. Pulley/sprocket slipping on shaft.</li> <li>9. Motor bearings are at fault.</li> <li>10. Machine is undersized for the task.</li> <li>11. Motor has overheated.</li> <li>12. Motor is at fault.</li> </ol>	<ol style="list-style-type: none"> <li>1. Reduce feed rate; increase blade speed.</li> <li>2. Eliminate workpiece binding; use jig, fence, guide, clamps, roller table, or push blocks as required for workpiece alignment control.</li> <li>3. Use metal with correct properties for your type of machining; match blade with workpiece and operation.</li> <li>4. Adjust blade tracking and tension (<b>Page 29</b>), redress rubber wheel tires if necessary (<b>Page 37</b>).</li> <li>5. Correct motor wiring connections (<b>Page 51</b>).</li> <li>6. Replace bad V-belt(s) as a matched set, align pulleys, and re-tension (<b>Page 41</b>).</li> <li>7. Test for good contacts; correct the wiring.</li> <li>8. Replace loose pulley/shaft.</li> <li>9. Test by rotating shaft; rotational grinding/loose shaft requires bearing replacement.</li> <li>10. Use sharp blade with lower TPI; reduce the feed rate; use a small amount of oil-based coolant if necessary.</li> <li>11. Clean off motor, let cool, and reduce workload.</li> <li>12. Test/repair/replace.</li> </ol>

## Motor & Electrical (continued)

Symptom	Possible Cause	Possible Solution
Machine has vibration or noisy operation.	<ol style="list-style-type: none"> <li>1. V-belt(s) worn or loose.</li> <li>2. Pulley is loose.</li> <li>3. Motor mount loose/broken.</li> <li>4. Machine is incorrectly mounted or sits unevenly.</li> <li>5. Workpiece is loose.</li> <li>6. Motor fan is rubbing on fan cover.</li> <li>7. Motor bearings are at fault.</li> <li>8. Blade is at fault.</li> <li>9. Blade wheels out of alignment.</li> </ol>	<ol style="list-style-type: none"> <li>1. Inspect/replace belts with a new matched set (<b>Page 41</b>).</li> <li>2. Realign/replace shaft, pulley, set screw, and key as required.</li> <li>3. Tighten/replace.</li> <li>4. Tighten/replace anchor studs in floor; relocate/shim machine.</li> <li>5. Use the correct holding fixture and reclamp workpiece.</li> <li>6. Replace dented fan cover; replace loose/damaged fan.</li> <li>7. Test by rotating shaft; rotational grinding/loose shaft requires bearing replacement.</li> <li>8. Re-tension/replace blade (<b>Pages 28 &amp; 29</b>).</li> <li>9. Re-align blade wheels (<b>Page 42</b>).</li> </ol>

## Cutting Operations

Symptom	Possible Cause	Possible Solution
Machine slows when operating.	<ol style="list-style-type: none"> <li>1. Feeding workpiece too fast.</li> <li>2. Blade is dull.</li> </ol>	<ol style="list-style-type: none"> <li>1. Reduce feed rate/increase blade speed.</li> <li>2. Replace blade (<b>Page 28</b>).</li> </ol>
Ticking sound when the saw is running.	<ol style="list-style-type: none"> <li>1. Blade weld contacting blade guide/support (a light ticking is normal).</li> <li>2. Blade weld may be failing.</li> </ol>	<ol style="list-style-type: none"> <li>1. Inspect/re-grind blade weld (<b>Page 33</b>); re-adjust blade guides/support (<b>Page 31</b>).</li> <li>2. Inspect weld and re-weld blade if necessary (<b>Page 33</b>), or replace blade (<b>Page 28</b>).</li> </ol>
Blade contacting table.	<ol style="list-style-type: none"> <li>1. Table improperly mounted or aligned.</li> </ol>	<ol style="list-style-type: none"> <li>1. Properly align table (<b>Page 44</b>).</li> </ol>
Vibration when cutting.	<ol style="list-style-type: none"> <li>1. Workpiece is loose.</li> <li>2. Loose or damaged blade.</li> <li>3. Metal chip buildup on wheels.</li> </ol>	<ol style="list-style-type: none"> <li>1. Use the correct holding fixture and reclamp workpiece.</li> <li>2. Re-tension/replace blade (<b>Pages 28 &amp; 29</b>).</li> <li>3. Clean metal chips from wheels.</li> </ol>
Rough or poor quality cuts.	<ol style="list-style-type: none"> <li>1. Feeding workpiece too fast.</li> <li>2. Incorrect blade for operation; worn or damaged blade.</li> <li>3. Blade guides/support adjusted incorrectly.</li> </ol>	<ol style="list-style-type: none"> <li>1. Reduce feed rate/increase blade speed.</li> <li>2. Use the correct blade for the operation (<b>Page 23</b>); replace worn or damaged blade (<b>Page 28</b>).</li> <li>3. Correctly adjust blade guides/support (<b>Page 31</b>); set the blade guides approximately 1/8" above workpiece.</li> </ol>
Blade wanders or doesn't cut straight.	<ol style="list-style-type: none"> <li>1. Blade lead.</li> <li>2. Metal chip buildup on wheels.</li> </ol>	<ol style="list-style-type: none"> <li>1. Re-tension/replace blade (<b>Pages 28 &amp; 29</b>).</li> <li>2. Clean metal chips from wheels.</li> </ol>
Cuts are not square (vertically).	<ol style="list-style-type: none"> <li>1. Table tilt is not adjusted to "0".</li> <li>2. Table is not square to the blade.</li> </ol>	<ol style="list-style-type: none"> <li>1. Adjust table to "0" tilt.</li> <li>2. Adjust table square with blade (<b>Page 44</b>).</li> </ol>
Wheel is noisy.	<ol style="list-style-type: none"> <li>1. Wheel bearing is worn out.</li> <li>2. V-belt is too tight (lower wheel).</li> </ol>	<ol style="list-style-type: none"> <li>1. Replace wheel bearing.</li> <li>2. Check/re-tension the V-belt (<b>Page 41</b>).</li> </ol>
Blade does not track consistently, correctly, or at all.	<ol style="list-style-type: none"> <li>1. Wheels are not coplanar or aligned with each other.</li> <li>2. Rubber tires on wheels are worn out.</li> </ol>	<ol style="list-style-type: none"> <li>1. Adjust wheels to be coplanar/aligned with one another (<b>Page 42</b>).</li> <li>2. Redress the rubber tires on the wheels (<b>Page 37</b>).</li> </ol>

# V-Belt Pulley Alignment

The correct alignment of the motor and lower wheel pulleys helps to ensure correct and even tension of the V-belts, proper power transmission, and reduced V-belt heat and wear during operation.

Remove the rear motor access panel, and use a straightedge across both pulleys, as shown in **Figure 47**, to check the pulley alignment.

**Figure 47.** Checking pulley alignment.

If necessary, use a 19mm wrench to loosen the two hex nuts securing the wheel pulley to its shaft, align the wheel pulley with the motor pulley, then re-tighten the hex bolts.

# Tensioning/ Replacing V-Belts

To ensure optimum power transfer from the motor to the blade without slipping, the V-belts must be in good condition and operate under proper tension. Check V-belt tension at least every three months—more often if the bandsaw is used daily. V-belts stretch with use and must be periodically re-tensioned.

Replace the V-belts as a matched set if they are cracked, frayed, or excessively worn.

## To check/tension/replace the V-belts:

1. DISCONNECT BANDSAW FROM POWER!
2. Remove the rear motor access panel.
3. Make sure the motor and lower wheel pulleys are correctly aligned.
4. Push the center of each V-belt as illustrated in **Figure 48**, using moderate force. When tensioned correctly, the deflection should be about  $\frac{3}{4}$ ".

**Figure 48.** Checking for correct V-belt tension.

—If the deflection is correct and the V-belts are in good condition, no further action is required. Replace the rear motor access panel.

—If the deflection is more than or less than 1/4" or the V-belts need to be replaced, then continue to **Step 5**.

5. Use a 12mm wrench to loosen the four motor mount hex bolts (see **Figure 49**).

**Figure 49.** Motor mount hex bolts.

6. If it is necessary to replace the V-belts, slide the motor toward the wheel pulley to relieve the tension, then replace the V-belts with a new matched set.
7. Position the motor to adjust the V-belt tension until they have the correct deflection, then re-tighten the hex bolts.

## Wheel Alignment

When the wheels are coplanar (in the same plane), the bandsaw cuts straighter, with much less vibration, heat, and blade wear because the blade is continuously balanced on the wheels. Refer to **Figure 50** to better understand this arrangement.

**Figure 50.** Wheel coplanar examples.

G8144Z/G8145Z/G8146Z  
(Manufactured Since 6/11)

## Checking Wheel Coplanarity

1. DISCONNECT BANDSAW FROM POWER!
2. Remove the table assembly from the machine.
3. Make sure the blade is correctly installed and tensioned.
4. Hold a self-made coplanarity gauge (see **Figure 50**) close to the center of both wheels, making sure that the gauge fully extends across the wheels as shown in **Figure 50**.

—If the wheels are coplanar (in the same plane), the gauge will evenly touch the top and bottom of both wheels.

—If the wheels are NOT coplanar, place the coplanarity gauge on the upper wheel first, ensuring that it touches both the top and bottom rim. Then adjust the lower wheel to be coplanar with the upper wheel.

**Note:** The upper wheel of the Model G8146Z can also be adjusted. To do this, refer to the detailed instructions later in this subsection.

## Adjusting Lower Wheel

1. Check the coplanarity of the wheels as outlined above, then identify the four wheel adjusting assemblies of the bottom wheel (see **Figure 51**).

**Figure 51.** Lower wheel adjusting assemblies.

**Note:** The lower wheel adjusting assemblies have a locking hex bolt threaded into an adjusting sleeve.

2. Use a 17mm wrench to loosen the locking hex bolts.
3. Use a 21mm wrench to loosen or tighten the adjusting sleeves as necessary to bring the lower wheel coplanar with the upper wheel.

**Example 1:** If the top of the lower wheel leans to far forward (see the top right example in **Figure 50**), thread the top two adjusting sleeves out.

**Example 2:** Alternately, if the lower wheel is parallel to the upper wheel but behind the plane of the upper wheel (see bottom right example in **Figure 50**), then thread all four adjusting sleeves in.

4. Re-tighten the locking hex bolts to secure the settings of the adjusting sleeves.
5. Re-check the wheels for alignment and repeat the steps above if necessary.
6. Re-check the pulley alignment and V-belt tension (**Page 41**).
7. Re-install the table and check its alignment with the blade (**Page 44**).

## Adjusting Upper Wheel (Model G8146Z only)

The Model G8146Z upper wheel adjusting fasteners consist of four locking hex bolts and four adjusting hex bolts with jam nuts (see **Figure 52**).

**Figure 52.** Model G8146Z upper wheel adjusting fasteners.

### To adjust the Model G8146Z upper wheel:

1. Complete all steps in the **Checking Wheel Coplanarity** subsection on **Page 43**.
2. Use a 17mm wrench to loosen the locking hex bolts and a 12 mm wrench to loosen the jam nuts on the upper wheel (see **Figure 52**).

**Note:** *Threading an adjusting hex bolt in will force that part of the wheel forward. Conversely, threading an adjusting hex bolt out will pull that wheel section to the rear of the machine when the locking hex bolt is re-tightened.*

3. Re-tighten the locking hex bolts and jam nuts to secure the settings of the adjusting hex bolts.
4. Re-check the wheels for alignment and repeat the steps above if necessary.
5. Re-install the table and check its alignment with the blade.

## Aligning Table To Blade

To ensure the angle accuracy of the cut, the table must be 90° to the blade from front-to-back and side-to-side. If the table is not square to the blade, it needs to be adjusted.

### To adjust the table square to the blade:

1. DISCONNECT BANDSAW FROM POWER!
2. Make sure the wheels are coplanar (**Page 43**) and the blade is properly tensioned (**Page 29**).
3. Set the angle of the table to "0".
4. Use a square to check table alignment with the blade, as shown in **Figure 53**.

**Figure 53.** Checking table alignment with the blade.

5. Use a 12mm wrench to loosen the table mounting hex bolts (see **Figure 54**).

**Figure 54.** Table mounting hex bolts and adjusting set screws.

6. Use a 5mm hex wrench to adjust the set screws so that the table is square to the blade front-to-back and side-to-side.

**Note:** Make small adjustments to the set screws, then recheck the alignment of the table with the blade.

7. When the table is 90° to the blade from front-to-back and side-to-side, re-tighten the mounting hex bolts to secure the table alignment.

## Blade Guides/ Support

The inserts in the face of the blade guides and the blade support are made of tungsten steel.

With use, the front of the blade guide inserts will wear and it may become difficult to properly adjust the guides to the blade (refer to **Adjusting Blade Guides** on **Page 31**). If this is the case, swap and turn over the blade guides so that the inserts are reversed relative to the blade (see **Figure 55**).

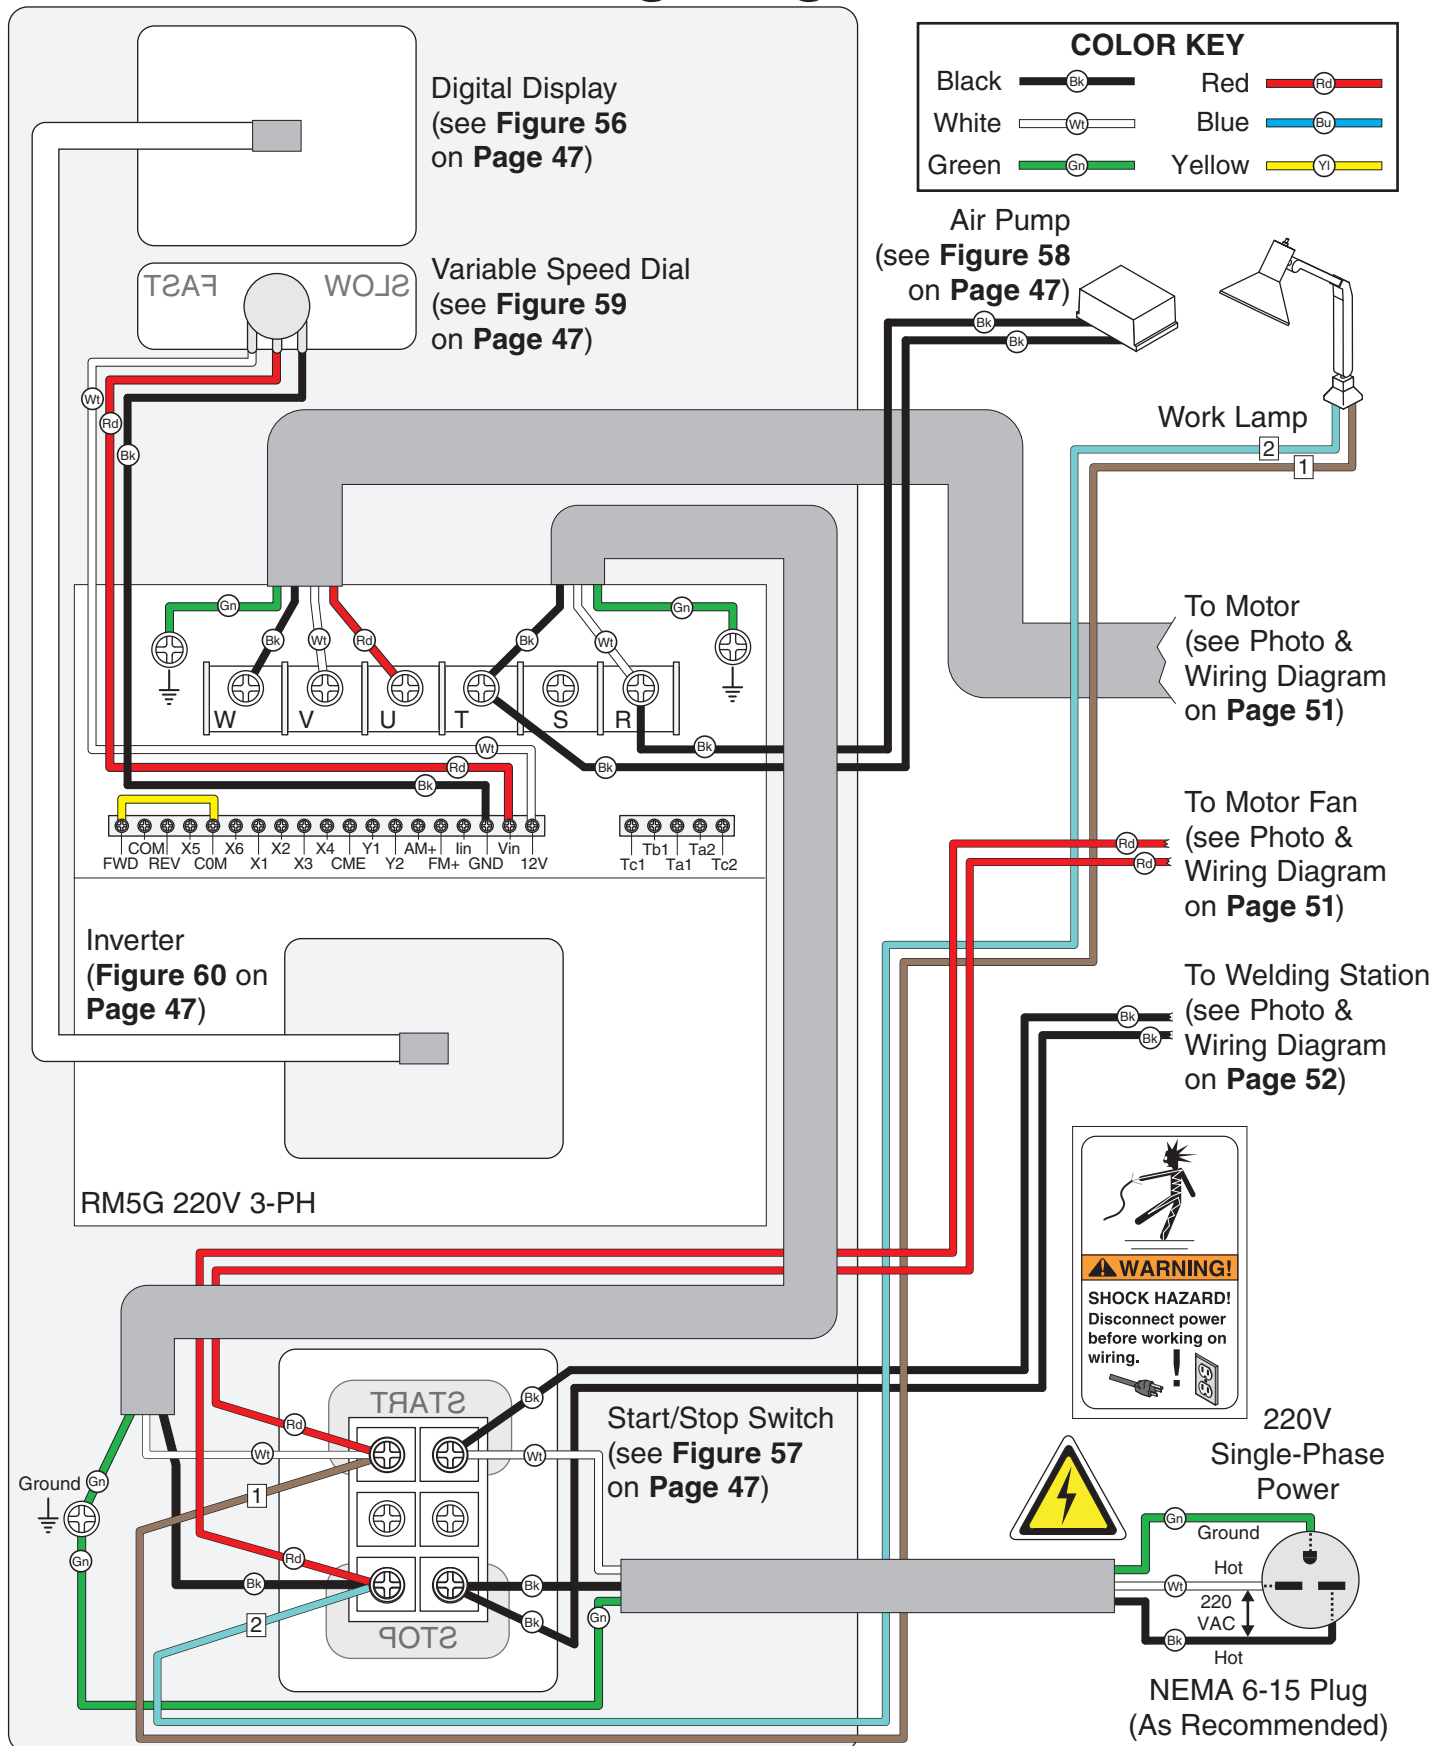

**Figure 55.** Blade guide and support orientation.

As the blade is deflected back into the blade support during operation, a groove will eventually wear into the blade support. As this groove becomes deeper, it can affect the accuracy of the cut. When this happens, loosen the blade support cap screw and rotate the blade support, as shown in **Figure 55**.

**Note:** Make sure to re-adjust the blade guides and support as directed in **Adjusting Blade Guides** on **Page 31** after making these changes.

# WARRANTY AND RETURNS

---

Grizzly Industrial, Inc. warrants every product it sells for a period of **1 year** to the original purchaser from the date of purchase. This warranty does not apply to defects due directly or indirectly to misuse, abuse, negligence, accidents, repairs or alterations or lack of maintenance. This is Grizzly's sole written warranty and any and all warranties that may be implied by law, including any merchantability or fitness, for any particular purpose, are hereby limited to the duration of this written warranty. We do not warrant or represent that the merchandise complies with the provisions of any law or acts unless the manufacturer so warrants. In no event shall Grizzly's liability under this warranty exceed the purchase price paid for the product and any legal actions brought against Grizzly shall be tried in the State of Washington, County of Whatcom.

We shall in no event be liable for death, injuries to persons or property or for incidental, contingent, special, or consequential damages arising from the use of our products.

To take advantage of this warranty, contact us by mail or phone and give us all the details. We will then issue you a "Return Number," which must be clearly posted on the outside as well as the inside of the carton. We will not accept any item back without this number. Proof of purchase must accompany the merchandise.

The manufacturers reserve the right to change specifications at any time because they constantly strive to achieve better quality equipment. We make every effort to ensure that our products meet high quality and durability standards and we hope you never need to use this warranty.

Please feel free to write or call us if you have any questions about the machine or the manual.

Thank you again for your business and continued support. We hope to serve you again soon.
