Owner's Manual & Safety Instructions

Save This Manual Keep this manual for the safety warnings and precautions, assembly, operating, inspection, maintenance and cleaning procedures. Write the product's serial number in the back of the manual near the assembly diagram (or month and year of purchase if product has no number). Keep this manual and the receipt in a safe and dry place for future reference.

ITEM 69662

2000 WATT CONTINUOUS/ 4000 WATT SURGE POWER INVERTER

Visit our website at: http://www.harborfreight.com Email our technical support at: tech@harborfreight.com

When unpacking, make sure that the product is intact and undamaged. If any parts are missing or broken, please call 1-800-444-3353 as soon as possible.

IMPORTANT SAFETY INFORMATION

AWARNING

Read all safety warnings and instructions.

Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury. Save all warnings and instructions for future reference.

General Precautions

- 1. People with pacemakers should consult their physician(s) before use. Electromagnetic fields in close proximity to heart pacemaker could cause pacemaker interference or pacemaker failure.
- WARNING: The brass components of this product contain lead, a chemical known to the State of California to cause birth defects (or other reproductive harm). (California Health & Safety code § 25249.5, et seq.)
- WARNING: This product contains or, when used, produces a chemical known to the State of California to cause cancer and birth defects or other reproductive harm. (California Health & Safety Code § 25249.5, et seq.)
- 4. The warnings, precautions, and instructions discussed in this instruction manual cannot cover all possible conditions and situations that may occur. It must be understood by the operator that common sense and caution are factors which cannot be built into this product, but must be supplied by the operator.

Installation Precautions

For technical questions, please call 1-800-444-3353.

- DO NOT INSTALL THIS INVERTER INTO A BUILDING'S ELECTRICAL SYSTEM. This inverter is a vehicular accessory. It is not designed to be safely used in a building's electrical system and has not been evaluated to meet building wiring codes. Improper application may create a fire or electric shock hazard.
- To allow proper cooling, install in indoor well-ventilated area and do not cover ventilation openings or cooling fins. Do not install in engine compartment.
 Especially avoid placing the Inverter on carpets and rugs; they are not only flammable, but they also obstruct vents underneath it.
- Keep combustible materials and gasses away from the inverter. The inverter produces sparks and heat during operation and can start a fire.
- Connect to 12 VDC power supply only. A power supply with lower voltage will not operate the Inverter correctly, and higher voltage could damage the unit.
- 5. Connect input polarity properly. Incorrect connection will damage inverter and void warranty.
- Do not use in a marine application.
 This inverter is not intended to withstand the highly corrosive conditions in marine applications and would quickly be rendered inoperable or unsafe.

- Keep inverter dry and clean. Do not expose to rain, snow, spray, bilge water or dust.
- 8. Use cables that are thick enough. The more power (amps) or the longer the cables, the thicker they need to be to prevent overheating and fire.
- Install as close to DC source as possible, but not in a closed area with vented lead-acid batteries.
 Vented lead-acid batteries release explosive hydrogen gas that can be ignited by the inverter.
- 10. Mount inverter horizontally.
- 11. Verify that installation surface has no hidden utility lines before drilling or driving screws.
- 12. This product is not a toy. Keep it away from children.
- 13. Do not use with positive ground electrical systems. (Most automobiles, trucks, and RV's have negative ground systems.)
- 14. The positive (+) battery on the Inverter must be the last connection made, and must be connected before the Inverter is turned on. There may be a small spark during the final connection. This is normal.
- 15. Properly ground the inverter's case as explained in this manual.

Battery Precautions

- 1. Wear splash-resistant ANSI-approved safety goggles and electrically insulated gloves while working near batteries.
- 2. Charge, store, and maintain batteries according to supplier's instructions.
- Locate batteries in a clean, well-ventilated area, away from ignition sources and flammable materials. Vented lead-acid batteries release explosive hydrogen gas while charging.
- Only connect similar batteries together. Do not connect old and new batteries together, wet and gel cells together, or batteries of different capacities together.
- 5. Use only 12 V batteries with this item.
- 6. Connect batteries in parallel ONLY (negative terminals together to one cable; positive terminals together to the other cable).
- 7. Install a properly rated fuse on the positive output of the battery bank.

Operation Precautions

- Multiple outlet power strips with switches and circuit breakers only interrupt power to the "hot" receptacle terminals. The "neutral" terminals remain powered with respect to the "ground" terminals. So strip switch may be off, but part of appliance may still be powered.
- Inspect supply connections before use to ensure they are tight and that insulation is not damaged.
- Do not use this inverter to power sensitive devices such as medical devices or computers.
 Do not use in ignition protected areas.
- 4. Some rechargeable tools and appliances can damage the Inverter. Check the temperature of the device several times when it is charging. If the device becomes extremely hot; turn the power off, remove the device, and do not use with the Inverter again.
- 5. Check for breakage of parts and any other condition that may affect the Inverter's operation. If damaged, have it repaired before use.
- Do not attempt to power a device, or combination of devices, that will require more than the rated output of this inverter. This may damage the inverter or the attached devices.

Item 69662

For technical questions, please call 1-800-444-3353.

- 7. Appliances such as microwave ovens will normally draw more than their rated current. For example: A typical 600 watt microwave oven will draw approximately 1,000 watts.
- 8. Do not attach a battery charger if the charger carries a warning that dangerous voltages are present at the battery terminals.
- Some fluorescent lamps may not operate properly with this type of inverter. If the bulb appears to be too bright, or fails to light, do not use the lamp with this inverter.
- Some fans with synchronous motors may slightly increase in speed when powered by the inverter.
 This is not harmful to the fan or to the inverter.
- 11. Inverter will consume some power while on, even without loads attached. Turn inverter off after use.

Service Precautions

DO NOT OPEN HOUSING.

Contains no user-serviceable parts.

Internal parts may be electrified, even with unit off and power disconnected.

- 2. Maintain labels and nameplates on the Inverter. These carry important safety information. If unreadable or missing, contact Harbor Freight Tools for a replacement.
- Have your Inverter serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the Inverter is maintained.
- 4. Fuses must be replaced with fuses of the same type and rating only.

SAVE THESE INSTRUCTIONS.

Symbology

	Double Insulated
(1)	Canadian Standards Association
(UL)	Underwriters Laboratories, Inc.
V~	Volts Alternating Current
$\overline{}$	Alternating Current Supply

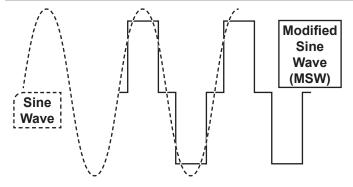

====	Direct Current Supply	
Α	Amperes	
Ø	Phase	
	Equipment Grounding Conductor	

Specifications

Input Voltage	12-15 VDC
Output Voltage	115 V~, 60 Hz
Continuous Power	2000 Watt
Surge Power	4000 Watt
Operating Conditions	32° - 104° F
AC Receptacles	Three 3-prong grounded polarized outlets
Fuse Type	Eight 30 Amp Internal Blade-type Fuses (professional replacement only)
Minimum Battery Cable required (not included)	For a 6" cable: 2 AWG or thicker For a 10' cable: 00 AWG or thicker
Overall Dimensions	10" L x 9" W x 3-1/2" H

Output Waveform

1. This inverter's output is a Modified Sine Wave. Power from most electric utilities is a Sine Wave.

Note: Only multimeters identified as "TRUE RMS" will read Modified Sine Wave voltage accurately.

- Modified Sine Wave (MSW) power is suitable for most AC devices and power supplies used in electronic equipment, transformers, and motors. Do not use to power sensitive devices such as medical equipment or computers. Some audio equipment may perform poorly if run on Modified Sine Wave power.
- 3. **Sine Wave** inverters provide power that is identical to, or even better than, the power supplied by your power company. Motors start easier and run cooler under Sine Wave power. Certain devices, such as laser printers, variable speed motors and digital clocks, require sine wave power to operate properly. Sine wave inverters are typically more expensive for their capacity than other inverters.

Installation

Read the <u>ENTIRE</u> IMPORTANT SAFETY INFORMATION section at the beginning of this manual including all text under subheadings therein before set up or use of this product.

AWARNING

TO PREVENT SERIOUS INJURY FROM ACCIDENTAL OPERATION:

Make sure that the Power Switch is in the off-position and unplug the tool from its electrical outlet before performing any procedure in this section.

Note: For additional information regarding the parts listed in the following pages, refer to *Parts List and Diagram* on page 11.

ACAUTION! This Inverter must only be connected to batteries with a output voltage of 12 volts DC. Lower voltage will not operate the Inverter properly, and more voltage could damage the Inverter or the device being powered. Do not use this Inverter with positive ground electrical systems.

The Inverter is configured to have a number of shut-down points, for the safety of the operator, the unit, and the devices being used with it.

- If the DC input voltage drops too low, the alarm on the Inverter will sound. Should the input voltage drop further, the Inverter will shut down automatically to prevent permanent battery damage. Recharge the battery soon.
- If the DC input voltage exceeds 15V the Inverter will shut down automatically.
- If the output load power rises higher than the rating power of the Inverter; the unit may shut down automatically.
- The Inverter may automatically shut down if its internal temperature gets too high.

Note: Even though this inverter has built-in mechanisms to minimize damage, these situations should be avoided because they can still damage the inverter or battery.

- Place the Inverter on a dry, level, non-flammable, stable surface. Make sure the Inverter has adequate ventilation and is not in direct sunlight.
- Connect one end of a ground wire (not included, use at least recommended wire thickness from specification sheet) to the wing nut located on the back of the Inverter. Then connect the other end of the ground wire to a paint/rust free grounded metal surface, such as the vehicle chassis.
- 3. Battery Type Selection:
 - Use only deep cycle lead-acid batteries with this inverter, such as 12 volt marine/RV deep-cycle batteries. Do not use automotive, engine starting (SLI), or maintenance-free wet cell batteries with this inverter; they are designed for repeated, shallow discharge and will wear out quickly.

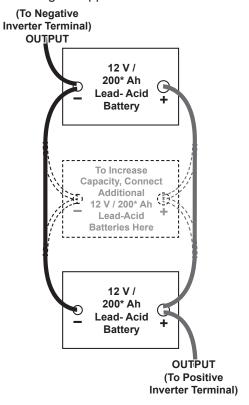

- Gel and AGM (Absorbed Glass Mat) batteries can be used with this inverter, but they require special charging procedures. Refer to battery supplier's instructions.
- 4. Battery capacity selection:

Inverter Output	about 1 hour discharge time (Minimum battery	about 4 hour discharge time (Optimal battery
	capacity)	capacity)
500W	80 Ah	200 Ah
1000W	150 Ah	400 Ah
1500W	240 Ah	700 Ah
2000W	300 Ah	1000 Ah
3000W	450 Ah	1500 Ah
4000W	600 Ah	2000 Ah
5000W	750 Ah	2500 Ah

Consult the chart above for approximate run time at different battery capacities. If the battery does not have a capacity this large individually, use a bank of batteries as explained below.

- 5. Battery Bank assembly instructions:
 - a. Read the following safety rules before assembling the battery bank:
 - Connect batteries in parallel (negative terminals together to one cable; positive terminals together to the other cable) as shown in Battery Bank Example illustration ONLY.
 - Do not connect 12V batteries in series (from negative of one battery to the positive of the next). This connection can result in voltage high enough to cause ELECTROCUTION.
 - Wear splash-resistant ANSI-approved safety goggles and electrically insulated gloves while assembling battery bank.
 - Only connect similar batteries together in a battery bank. Do not connect old and new batteries together, wet and gel cells together, or batteries of different capacities together.
 - Connect all batteries in the battery bank together using cables of the thickness recommended on the specification sheet or thicker. Since amp draw on this low-voltage circuit will be very high, thinner cables present a fire hazard.

- Locate battery bank in a clean, wellventilated area, away from ignition sources and flammable materials. Batteries release explosive hydrogen gas while charging.
- Charge, store, and maintain batteries according to supplier's instructions.

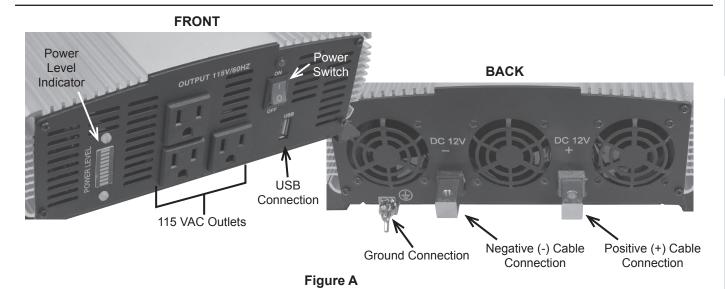

12 V / 400[^] Ah Battery Bank Example

- * 200 Ah batteries shown for illustration.
- ^ Bank Capacity = (single battery capacity) x (# of batteries) 400 Ah capacity is for two, 200 Ah batteries.
- b. Connect the batteries in parallel as shown above. Connect all of the positive terminals to one another.

- c. Then connect all the negative terminals to one another.
- d. Connect the negative and positive output cables to <u>opposite</u> ends of the bank. Do not allow the output cables to touch one another.
- e. Test the voltages at the output cables to help ensure that the battery bank is properly wired. If the voltage is higher than 13 volts, then part of the battery bank is likely connected in series (a negative terminal of one battery attached to a positive terminal of another) instead of in parallel. Carefully examine the diagram and correct the wiring before attaching to the inverter.
- 6. Turn the inverter's Switch off.
- 7. Connect the output cables from the battery bank to the inverter.

Functions

Item 69662

Operating Instructions

Read the <u>ENTIRE</u> IMPORTANT SAFETY INFORMATION section at the beginning of this manual including all text under subheadings therein before set up or use of this product.

Tool Set Up

AWARNING

TO PREVENT SERIOUS INJURY FROM ACCIDENTAL OPERATION:

Make sure that all Power Switches/Triggers is in the off-position and unplug the tool from its electrical outlet before performing any procedure in this section.

Operating Instructions

- Plug 120 V~ device(s) into the receptacles. Switch all devices off. The devices must not use more than the rated wattage during continuous operation, otherwise they may overload the Inverter.
- Turn the inverter's Switch on.

<u>NOTE:</u> Some rechargeable tools/appliances may damage the Inverter or the device(s). When first using a rechargeable device, check the Inverter's temperature for the first ten minutes. If it becomes abnormally hot, do not use the device with the Inverter.

- 3. Turn the tool or appliance(s) on, one at a time. If the alarm sounds, turn off the device(s). Unplug the device(s) from the Inverter. Check the wattage of the devices, if there were multiple devices plugged in, discontinue use of one or more. If a single device set the alarm off, it is not appropriate for use with the Inverter.
- 4. If the inverter is powered by a vehicle's starting battery, be careful not to discharge the battery to the point that it will no longer start the engine. If needed, operate the engine periodically to maintain the batteries charge. Do not operate a vehicle's engine in an enclosed space.
- Inverter will consume some power while on, even without loads attached. Turn inverter off after use.

Typical Appliance Power Consumption

Product	Wattage
Laptop	50
Stereo	200
Mixer	200
Table Fan	200
TV-VCR	250
Computer	250
Small Refrigerator	350
Jigsaw	350
Belt Sander	350
3/8" Drill	350
Blender	350
Laser Printer	400
Food Processor	400
Blender Laser Printer	350 400

Product	Wattage
Reciprocating Saw	600
AC (5,000 BTU)	700
Vacuum	750
Chest Freezer	800
Coffee Maker	850
Iron	1050
Mini Microwave	1200
Hair Dryer	1200
10" Saw	1350

Note: This chart is intended as a general guideline only, actual appliance wattage requirements will vary. Some appliances listed above may require a pure sine wave inverter instead for proper operation.

Maintenance and Servicing

Procedures not specifically explained in this manual must be performed only by a qualified technician.

AWARNING

TO PREVENT SERIOUS INJURY FROM ACCIDENTAL OPERATION:

Make sure that all loads are disconnected from the Inverter, the Power Switch is in the off-position and the cables are disconnected from power source before performing any procedure in this section.

TO PREVENT SERIOUS INJURY FROM TOOL FAILURE:

Do not use damaged equipment. If abnormal noise or vibration occurs, have the problem corrected before further use.

Cleaning, Maintenance, and Lubrication

- 1. **BEFORE EACH USE**, inspect the general condition of the tool. Check for:
 - · loose hardware.
 - · misalignment or binding of moving parts,
 - · damaged cord/electrical wiring,
 - · cracked or broken parts, and
 - any other condition that may affect its safe operation.
- 2. **AFTER USE**, wipe external surfaces of the tool with clean cloth.

 Maintain batteries according to manufacturer's instructions. Check electrolyte level on all batteries after charging and refill as needed. Charge batteries according to manufacturer's recommendations ONLY; incorrect charging may cause battery damage or explosion.

DO NOT OPEN HOUSING.

Contains no user-serviceable parts.

Internal parts may be electrified, even with unit off and power disconnected.

5. Internal electronic components must be disposed of properly or recycled.

Troubleshooting

Problem	Possible Causes	Probable Solutions
Inverter shuts off	Excessive load at output.	Reduce load to less than rated power.
during use	Internal temperature is too high.	Let the Inverter cool down for at least 30 minutes. Make sure that the fan is not blocked and that the Inverter has sufficient ventilation.
No output voltage.	Cords not connected properly	Check and secure connections
	2. Fuse on battery bank open	Check battery bank fuse and replace as needed.
	3. Internal fuse(s) open	Have technician check internal fuses and replace as needed. Only a qualified technician should open housing.
	4. Low input voltage	4. Recharge or Replace Battery
	5. Loose or corroded connection	5. Clean and tighten connection
	6. High input voltage	Remove charging source and make sure correct battery is being used and connected correctly.
Output voltage is incorrect	Input voltage is too high or too low	Maintain input voltage at required level
Could not drive load	1. Load power is too large	Lower load level
	2. The AWG of the wire is too low	2. Use appropriately-sized wire connections
	3. Start power of an appliance is up to twice the rated power.	3. Reduce load, or change appliances
Motor-operated device operates at incorrect speed	Load is only inductive	Operate a lamp or heater at the same time to provide a more balanced load.
Television picture is full of static or speakers	Television or radio interference	Move Inverter away from antenna and/ or use a shielded antenna cable.
make a buzz	2. Incompatible device	Contact device supplier to make sure that device can operate on Modified Sine Wave Power.

Follow all safety precautions whenever diagnosing or servicing the inverter. Disconnect power supply before service.

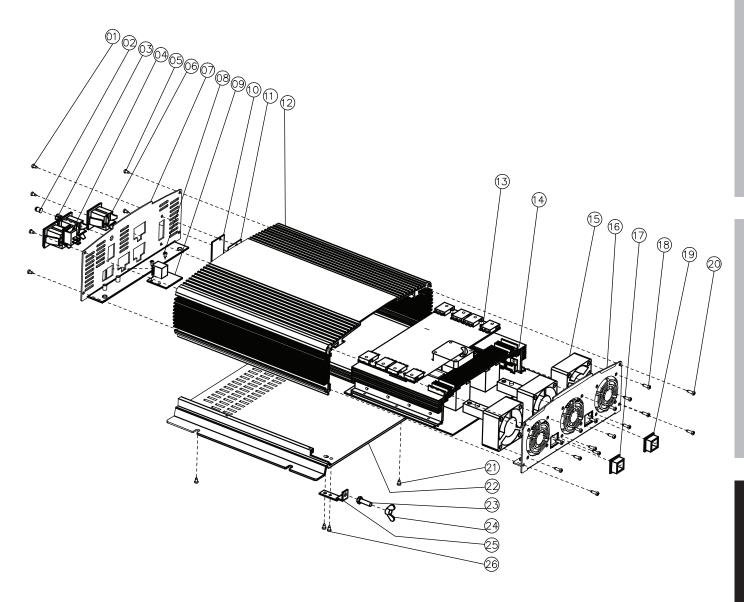

PLEASE READ THE FOLLOWING CAREFULLY

THE MANUFACTURER AND/OR DISTRIBUTOR HAS PROVIDED THE PARTS LIST AND ASSEMBLY DIAGRAM IN THIS MANUAL AS A REFERENCE TOOL ONLY. NEITHER THE MANUFACTURER OR DISTRIBUTOR MAKES ANY REPRESENTATION OR WARRANTY OF ANY KIND TO THE BUYER THAT HE OR SHE IS QUALIFIED TO MAKE ANY REPAIRS TO THE PRODUCT, OR THAT HE OR SHE IS QUALIFIED TO REPLACE ANY PARTS OF THE PRODUCT. IN FACT, THE MANUFACTURER AND/OR DISTRIBUTOR EXPRESSLY STATES THAT ALL REPAIRS AND PARTS REPLACEMENTS SHOULD BE UNDERTAKEN BY CERTIFIED AND LICENSED TECHNICIANS, AND NOT BY THE BUYER. THE BUYER ASSUMES ALL RISK AND LIABILITY ARISING OUT OF HIS OR HER REPAIRS TO THE ORIGINAL PRODUCT OR REPLACEMENT PARTS THERETO.

Limited 90 Day Warranty

Harbor Freight Tools Co. makes every effort to assure that its products meet high quality and durability standards, and warrants to the original purchaser that this product is free from defects in materials and workmanship for the period of 90 days from the date of purchase. This warranty does not apply to damage due directly or indirectly, to misuse, abuse, negligence or accidents, repairs or alterations outside our facilities, criminal activity, improper installation, normal wear and tear, or to lack of maintenance. We shall in no event be liable for death, injuries to persons or property, or for incidental, contingent, special or consequential damages arising from the use of our product. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation of exclusion may not apply to you. THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS.

To take advantage of this warranty, the product or part must be returned to us with transportation charges prepaid. Proof of purchase date and an explanation of the complaint must accompany the merchandise. If our inspection verifies the defect, we will either repair or replace the product at our election or we may elect to refund the purchase price if we cannot readily and quickly provide you with a replacement. We will return repaired products at our expense, but if we determine there is no defect, or that the defect resulted from causes not within the scope of our warranty, then you must bear the cost of returning the product.

This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

3491 Mission Oaks Blvd. • PO Box 6009 • Camarillo, CA 93011 • (800) 444-3353
