## Introduction

This manual provides reference information for servicing the HP Omnibook XT6050 (technology code EF) and XT/VT6200 (technology code EG) series notebook computers. It is for use by HP-authorized service personnel while installing, servicing, and repairing these products.

The manual is designed as a self-paced guide that will train you to install, configure, and repair these notebooks. The manual is self-contained, so you can follow it even without having equipment available.

The following table lists other sources of information about the computers and related products.

**Table 1-2. Product Comparisons**

|   | Omnibook XT/VT6200  | Omnibook XT6050  | Omnibook 6000/6100  |
|---|---|--|---|
| <b>Processor*</b>   | Pentium 4-M (1.4 to 1.8 GHz).   | Celeron (1.06 to 1.13 GHz) or Pentium III-M (933 to 1133 MHz).   | Celeron (550 to 750 MHz) or Pentium III-M (600 to 1133 MHz).  |
| <b>Memory</b>   | At least 128 MB RAM preinstalled. Can support up to 2 GB RAM.   | At least 128 MB SDRAM in system slot. Expandable to 1024 MB.   | 64, 128, or 256 MB SDRAM in system slot. Expandable to 512 (OB 6000) or 1024 (OB 6100) MB.  |
| <b>Display</b>  | 15-in TFT UXGA or SXGA+, or 14-in TFT SXGA+ or XGA.   | 14-in TFT XGA.   | 15-in TFT SXGA+ or 15- or 14-in TFT XGA.  |
| <b>Video</b>  | AGP 4X graphics interface. 16 or 32 MB DDR video RAM with 32- or 64-bit graphics interface. 3D and OpenGL graphics support. Up to 16M colors. | AGP 4X graphics interface. Up to 48 MB dynamically allocated video RAM (shared with system RAM) with 32- or 64-bit graphics interface. 3D and OpenGL graphics support. Up to 16M colors. | AGP 2X or 4X graphics interface. 4, 8, or 16 MB video RAM with 32- or 64-bit graphics interface. 3D and OpenGL graphics support. Up to 16M colors (UXGA). Zoomed Video enabled. |
| <b>Operating System</b>   | Windows 2000 or XP preinstalled.  | Windows 2000 or XP preinstalled.   | Windows 98, 2000, or XP preinstalled.   |
| <b>Power States</b>   | On, Standby, Hibernate, Off.  | On, Standby, Hibernate, Off.   | On, Standby, Hibernate, Off.  |
| * Intel Mobile Pentium, Mobile Pentium-M, Mobile Pentium 4-M, or Mobile Celeron Processor. Dual-speed processors use Intel SpeedStep Technology.<br>All models feature HP Toptools, and are ACPI compliant. |   |  |   |

---

## Features

The following three illustrations show the computer's main external features. For an exploded view of the computer, see page 4-2.

**Figure 1-1. Omnibook — Front View**

- |  |   |
|--|---|
| 1. One-Touch buttons.  | 9. Module release latch.  |
| 2. Sleep button. Suspends and resumes operation.   | 10. Volume control.   |
| 3. Keyboard status lights (left to right: Caps Lock, Num Lock, Keypad Lock, Scroll Lock).  | 11. Audio-off button and audio-off light.   |
| 4. Power slide button. Turns the computer on and off.  | 12. Audio jacks (left to right): audio out, external microphone, audio in (certain models). |
| 5. Built-in microphone.  | 13. Infrared port.  |
| 6. Pointing stick (certain models).  | 14. S-video port (TV-out) (certain models).   |
| 7. Touch pad, click and scroll buttons, plus touch pad on-off button and indicator (certain models).   | 15. System-off switch.  |
| 8. Main status lights (left to right): power mode, hard disk activity, charging status for main battery, and charging status for secondary battery (certain models). | 16. Kensington lock slot (security connector).  |
|  | 17. Notebook latch.   |

**Figure 1-2. Omnibook — Back View**

- |  |  |
|--|--|
| 18. PS/2 keyboard mouse port (supports Y adapter). | 24. AC adapter jack.   |
| 19. Universal serial bus (USB) ports.              | 25. Modem port (certain models).                                 |
| 20. Serial port (COM1).                            | 26. LAN port and indicator LEDs.                                 |
| 21. Parallel port (LPT1).                          | 27. PC card and CardBus slot.                                    |
| 22. External VGA monitor port.                     | 28. Wireless on-off button and indicator light (certain models). |
| 23. Docking port.                                  |  |

**Figure 1-3. Omnibook — Bottom View**

- |  |  |
|--|--|
| 29. Plug-in module bay. Can contain a CD-ROM or DVD drive, floppy disk drive, secondary battery (certain models), or other plug-in module. | 32. Hard disk drive cover.                 |
| 30. Main battery.  | 33. RAM cover.                             |
| 31. Main battery latch.  | 34. Mini-PCI cover (no user parts inside). |

---

# Operation

This section gives an overview of the notebook's operation.

## Turning the Computer On and Off

You will normally start and stop the notebook using its blue sleep button. However, at certain times you may want to use other methods, depending on power considerations, types of active connections, and start-up time.

**Note**

This manual describes the notebook in its original factory configuration, with all settings at their default values.

**Table 1-3. Activating Power Modes**

| Power mode   | To enter this mode   | To turn on again   |
|--|--|--|
| <b>On</b><br>Power mode status light is on.  | Press the blue sleep button.   |  |
| <b>Standby mode</b><br>Saves significant power.<br>Turns off the display and other components.<br>Maintains current session in RAM.<br>Restarts quickly.<br>Restores network connections.<br>Power mode status light blinks. | Press the blue sleep button<br>–or–<br>Click Start, Shutdown, Standby (Windows 2000).<br>–or–<br>Click Start, Turn Off Computer, Stand By (Windows XP).<br>–or–<br>Allow timeout.  | Press the blue sleep button to quickly resume your session.  |
| <b>Hibernate mode</b><br>Saves maximum power.<br>Saves current session to disk, then shuts down.<br>Restores network connections.<br>Power mode status light is off.   | Press Fn+F12.<br>–or–<br>Click Start, Shut Down, Hibernate (Windows 2000).<br>–or–<br>Click Start, Turn Off Computer, then press and hold Shift and click Hibernate (Windows XP).<br>–or–<br>Allow timeout.                      | Press the blue sleep button to resume your previous session. |
| <b>Shut down (off)</b><br>Saves maximum power.<br>Turns off without saving current session.<br>At startup, resets everything, starts a new session, and restores network connections.<br>Power mode status light is off.     | Click Start, Shut Down, Shut down (Windows 2000).<br>–or–<br>Click Start, Turn Off Computer, Turn Off (Windows XP).<br>–or–<br>Slide the power button and hold for five seconds (only if the Start menu procedure doesn't work). | Press the blue sleep button to restart with a new session.   |

## Checking the Status of the Notebook

The main status lights on the front of the notebook report power status, battery status, and hard disk activity.

**Table 1-4. Main Status Lights (front of notebook)**

|     | Meaning  |
|---|--|
|     | <b>Power status</b><br>On: notebook is on (even if the display is off).<br>Blinking: notebook is in Standby mode.<br>Off: notebook is off or in Hibernate mode.<br>Red light: notebook failed when resuming, and must be reset.  |
|     | <b>Hard disk drive activity</b><br>On: notebook is accessing the hard disk drive.  |
|     | <b>Main battery status</b><br>Green: The AC adapter is connected and the battery is fully charged.<br>Amber: The AC adapter is connected and the battery is charging.<br>Red or blinking: The AC adapter is connected and the battery is missing or has a fault.<br>Off: The AC adapter is not connected.  |
|     | <b>Secondary battery status (XT/VT6200 models only)</b><br>Green: The AC adapter is connected and the battery is fully charged.<br>Amber: The AC adapter is connected and the battery is charging.<br>Red or blinking: The battery has a fault.<br>Off: The AC adapter is not connected, a secondary battery is not installed, or the battery is not charging. |

The keyboard status lights, located above the keyboard, indicate the states of the keyboard locks.

**Table 1-5. Keyboard Status Lights**

|     | Meaning   |
|---|---|
|     | <b>Caps Lock</b><br>Caps Lock is active.  |
|     | <b>Num Lock</b><br>Num Lock is active. (The Keypad Lock must also be on to use the embedded keypad.)  |
|     | <b>Keypad Lock</b><br>The embedded keypad is active (Fn+F8). Num Lock must also be on for the numeric keys—otherwise, cursor control is active (as marked on an external keyboard). |
|     | <b>Scroll Lock</b><br>Scroll Lock is active.  |

In addition, the battery module has five lights on its back (flat) side that indicate its charge level. To see these lights, remove the battery from the notebook and press the pad next to the lights on the battery. The number of lights that turn on indicates the charge.

## Using Fn Hot Keys

The combination of the Fn key plus another key creates a *hot key*—a shortcut key sequence—for various system controls. To use a hot key, press *and hold* Fn, press the appropriate second key, then release both keys.

On Omnibook XT6050 models with Windows 2000, external keyboards support only Fn+F5, Fn+F7, and Fn+F12. To use these, press and hold left Ctrl+left Alt, press the appropriate second key, then release both keys.

Windows XP does not support Fn keys on external keyboards.

**Table 1-6. Fn Hot Keys**

| <b>Hot Key</b> | <b>Effect</b>  |
|----------------|--|
| Fn+F1          | Decreases the display brightness.  |
| Fn+F2          | Increases the display brightness.  |
| Fn+F5          | Toggles among the built-in display, an external display, and simultaneous display on both.   |
| Fn+F7          | Mutes the computer's speakers.   |
| Fn+F8          | Toggles the built-in keypad on and off. Does not affect an external keyboard. If Num Lock is on, then the numeric functions are active; otherwise, cursor control is active. |
| Fn+F12         | Enters Hibernate mode.   |
| Fn+NumLock     | Toggles Scroll Lock on and off.  |

## Resetting the Computer

Occasionally, Windows or the computer may stop responding, so that you cannot turn the computer off. If this happens, try the following in the order listed. Press the blue sleep button to restart.

- If possible, shut down Windows: click Start, Turn Off Computer, Turn Off (Windows XP) or Start, Shut Down, Shut down (Windows 2000).
- Press Ctrl+Alt+Del, then click Shut Down.
- Slide and hold the power button for about four seconds, until the display turns off.
- Use a straightened paper clip to press the system-off switch on the right side of the notebook.

**Figure 1-4. Resetting the Computer**

### Note

To boot from a CD, insert a bootable CD (such as the *Recovery CDs*) into the drive, then restart. Press Esc when the HP logo appears, then select the CD-ROM/DVD drive as the temporary boot device.

# Specifications

The following tables list the specifications for the notebook and its accessories. These are subject to change: for the latest versions, see the HP Notebook web site ([www.hp.com/notebooks](http://www.hp.com/notebooks)).

**Table 1-7. Omnibook XT6050 and XT/VT6200 Specifications**

|                                       |   |
|---------------------------------------|---|
| <b>Physical Attributes</b>            | <p>Size (14-inch display): 315 × 261 × 32 mm (12.4 × 10.3 × 1.3 in).<br/>         Size (15-inch display): 325 × 264 × 35 mm (12.8 × 10.4 × 1.4 in).<br/>         Weight: 2.2–2.8 kg (4.9–6.2 lb), depending on configuration.<br/>         Magnesium display cover on certain models.</p>   |
| <b>Processor and Bus Architecture</b> | <p><b>Omnibook XT/VT6200:</b><br/>         1.4- to 1.7-GHz Intel Pentium 4-M processor with Intel SpeedStep technology.<br/>         512-KB L2 cache.<br/>         1.4-V core low-power processor with 400-MHz processor system bus.</p> <p><b>Omnibook XT6050:</b><br/>         933- to 1133-MHz Intel Mobile Pentium III-M processor with Intel Speed Step technology or 933- to 1133-MHz Intel Mobile Celeron processor.<br/>         512-KB (Pentium models), 256-KB (Celeron models 1000 MHz and above), or 128-KB (Celeron models below 1000 MHz) L2 cache.<br/>         1.4-V core low-power processor with 133-MHz processor system bus.</p>  |
| <b>Video</b>                          | <p><b>Omnibook XT/VT6200:</b><br/>         14-inch XGA (1024 × 768) or SXGA+ (1400 × 1050), or 15-inch SXGA+ (1400 × 1050) or UXGA (1600 × 1200) active-matrix (TFT) LCD display.<br/>         Hardware 3D and DVD acceleration.<br/>         Dual display capability (depends on operating system support).<br/>         External monitors up to 1600 × 1200 resolution, 16M colors, and at least 75-Hz refresh rate (only 60 Hz at 1400 × 1050). Refresh rate and clarity may vary depending on monitor, resolution, and color depth.<br/>         ATI Mobility Radeon graphics accelerator with 16- or 32-MB DDR graphics memory, 4x AGP graphics capability.</p> <p><b>Omnibook XT6050:</b><br/>         14-inch XGA (1024 × 768) active-matrix (TFT) LCD display.<br/>         Hardware 3D and DVD acceleration.<br/>         Dual display capability (depends on operating system support).<br/>         External monitors up to 1600 × 1200 resolution with 16M colors at 60 Hz refresh rate or 64K colors at 85 Hz refresh rate.<br/>         Up to 48-MB dynamically allocated video RAM shared with system RAM.</p> |
| <b>Power</b>                          | <p>Rechargeable lithium-ion battery with LED charge-level gauge: 11.1 Vdc (certain Omnibook XT6050 models) or 14.8 Vdc.<br/>         Battery life (one battery): 3 to 4 hours typical (varies with model, usage, and power settings).<br/>         Fast battery recharge:<br/>             Omnibook XT/VT6200: 80% in 2 hours, 100% in 3 hours typical.<br/>             Omnibook XT6050: 80% in 1.5 hours, 100% in 2 hours typical.<br/>         Low-battery warning.<br/>         Suspend/resume capability.<br/>         Universal AC adapter:<br/>             Omnibook XT/VT6200: 100–240 Vac (50/60 Hz) input, 19 Vdc output minimum, 75 W/3.95 A minimum.<br/>             Omnibook XT6050: 100–240 Vac (50/60 Hz) input, 19 Vdc output minimum, 60 W/3.16 A minimum.<br/>         Optional secondary battery available for module bay for Omnibook XT/VT6200.</p>   |

|                                      |   |
|--------------------------------------|---|
| <b>Mass Storage</b>                  | Removable hard drive with Ultra-DMA 100 interface:<br>Omnibook XT/VT6200: 20 to 40 GB<br>Omnibook XT6050: 10 to 30 GB<br>1.44-MB floppy drive module (certain models).<br>24x CD-ROM, 6x or 8x DVD, or other drive module (or higher).<br>Optional drive modules available.   |
| <b>RAM</b>                           | <b>Omnibook XT/VT6200</b><br>Two slots for PC2100 DDR266 RAM modules:<br>Up to 1024 MB RAM using 512-MB modules, can support 2 GB RAM maximum.<br><b>Omnibook XT6050</b><br>Two slots for PC133 RAM modules:<br>Up to 1024 MB RAM.<br><b>All models:</b> At least 128 MB RAM preinstalled.  |
| <b>Audio System</b>                  | Stereo sound via two built-in speakers (500 Hz to 10 kHz range).<br>16-bit Sound Blaster Pro-compatible stereo sound (certain models).<br>3D-enhanced audio.<br>Built-in microphone.<br>Separate audio-off button with indicator light.<br>Headphone-out and microphone-in jacks; audio line-in jacks for certain models.   |
| <b>Keyboard and Pointing Device</b>  | 87/88-key touch-type QWERTY keyboard with 101/102 key emulation.<br>Embedded numeric keypad.<br>Left and right click buttons, center scroll button.<br>12 function (Fn) keys.<br>4 user-programmable One-Touch buttons.<br>Touch pad with on-off button with indicator light (certain models).<br>Pointing stick (certain Omnibook VT6200 models).  |
| <b>LAN</b>                           | Ethernet 10Base-T (10 Mbps) and 100Base-TX (100 Mbps) support.<br>Supports wake-on-LAN (Windows 2000 and XP), fast IP, DMI, dRMON.<br>MBA (Managed Boot Agent) support for PXE/BINL, NCP/IPX, DHCP.   |
| <b>Modem (certain models)</b>        | Ambit/Lucent hardware-based controllerless modem or software-based modem (Ambit/ESS), mini-PCI interface.<br>Data speed: 56 Kbps (V.90, V.92) maximum.<br>Fax speed: 14.4 Kbps, Class 1 and 2.<br>Modulation: V.21, V.22, V.22bis, V.23, V.32, V.32bis, V.34, V.90, V.92, X2, Bell 103, Bell 212A.  |
| <b>Wireless LAN (certain models)</b> | Radio: IEEE 802.11b, WECA Wi-Fi compliant, direct-sequence spread-spectrum.<br>Operating frequency: 2.5-GHz ISM band, exact frequencies and channels depend on country.<br>Raw data rate: 1, 2, 5.5, or 11 Mbps.<br>Transmitter output: 15 dBm typical (approx. 30 mW), 16 dBm max (approx. 40 mW).<br>Receiver sensitivity: -84 dBm typical.<br>Range: up to 100 m (300 ft) or more, depending on environment and conditions.<br>On-off button and indicator.<br>Mini-PCI interface. |
| <b>Input/Output</b>                  | Universal serial bus (USB 1.1), two ports.<br>9-pin, 115,200-bps serial port.<br>25-pin bi-directional ECP/EPP parallel port.<br>15-pin VGA video-out with DDC support.<br>S-video (TV out) (Omnibook XT/VT6200).<br>PS/2 keyboard/mouse.<br>4-Mbps IrDA-compliant infrared port.   |
| <b>Expandability</b>                 | PC card slots: one Type I, II, or III 16-/32-bit.<br>CardBus enabled.<br>Plug-in module bay for accessory modules.<br>Optional port replicator, and mini dock.  |

# Internal Design

The motherboard PCA is the central component of the Omnibook's design. It plays a role in virtually all system functions. The CPU module and most other subsystems connect to the motherboard.

The following figure shows the connections among the Omnibook's replaceable electronic modules. Table 1-9 on page 1-15 lists the roles that these modules play in the Omnibook's functional subsystems.

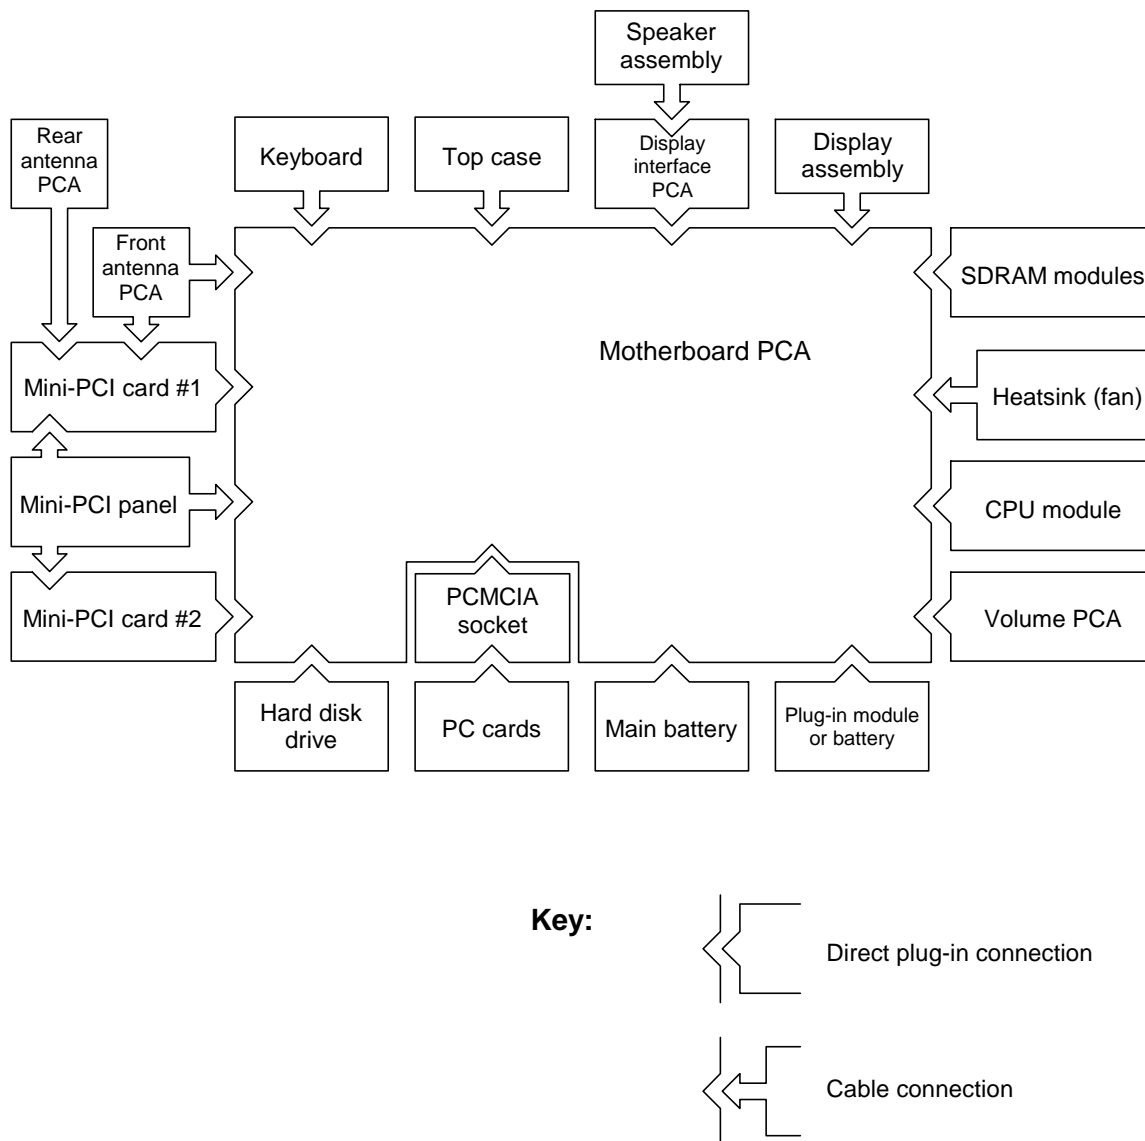

Figure 1-5. Replaceable Module Diagram

# Removal and Replacement

This chapter tells you how to remove and replace the Omnibook's components and assemblies. The items marked by • in the following table are user-replaceable.

**Table 2-1. Removal Cross-Reference**

|--|---|

## Caution

Always provide proper grounding when performing repairs. Without proper grounding, an electrostatic discharge can damage the Omnibook and its components.

## Notes

Reassembly steps are the reverse of the removal steps. Reassembly notes are included at the end of each section below.

 Symbols like this throughout this chapter show approximate full-size screw outlines. You can use these to verify the sizes of screws before you install them. Installing a wrong-size screw can damage the unit. (The symbol at the left represents an M2.5x5mm T-head screw.)

**Table 2-2. Required Equipment**

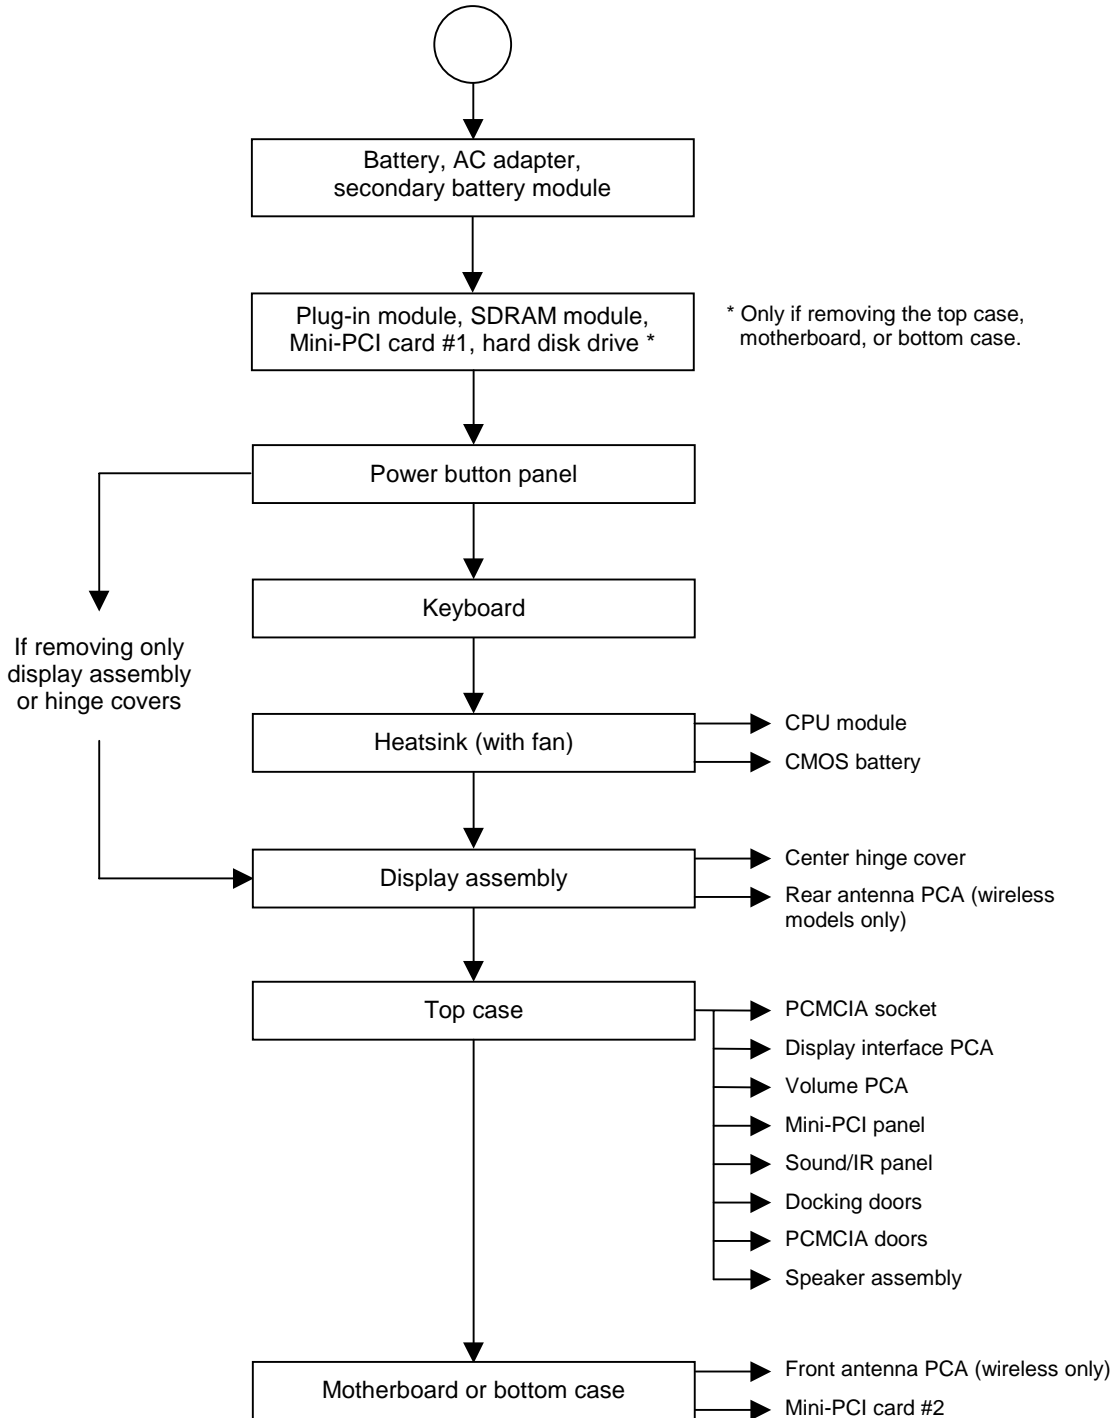

- Small Phillips screwdriver, preferably magnetized.
- Small flat-blade screwdriver.
- IC (PLCC) removal tool (similar to OK Industries EX-5).

**Table 2-3. Recommended Screw Torques**

| Screw Thread Size    | Torque (cm-kgf) | Torque (in-lbf) |
|----------------------|-----------------|-----------------|
| M2                   | 1.3 – 1.8       | 1.1 – 1.5       |
| M2.5 (2–11 mm long)  | 3.0 – 3.5       | 2.6 – 3.0       |
| M2.5 (12–19 mm long) | 2.5 – 3.0       | 2.2 – 2.6       |
| M3                   | 3.0 – 3.5       | 2.6 – 3.0       |

# Disassembly Flowchart

The following diagram shows the general “path” you will use in disassembling the computer to access any particular component.

**Figure 2-1. Disassembly Flow**

---

## Removing the Battery

(User-Replaceable)

### Required Equipment

- None.

### Removal Procedure

- Slide the battery's release latch, then lift the battery out of its compartment.

Figure 2-2. Removing the Battery

### Reassembly Notes

- Insert the front (rounded) end of the battery into the battery compartment on the bottom of the computer, and lower the back end in until it clicks into place.

---

## Removing a Plug-In Module (User-Replaceable)

### Required Equipment

- None.

### Removal Procedure

1. Press the button on the module release latch, and slide the latch toward the front of the computer.

**Figure 2-3. Releasing a Module**

2. Grasp the module and pull it out.

**Figure 2-4. Removing a Module**

---

## Removing an SDRAM Module (User-Replaceable)

The notebook has no SDRAM built into its motherboard, but has two slots for SDRAM modules. One slot contains an SDRAM module installed at the factory.

### Note

Omnibook XT6050 models use only PC133 SDRAM modules, and Omnibook XT/VT6200 models use only DDR266 SDRAM modules. Using the wrong type of module prevents the notebook from booting.

### Caution

Handle the SDRAM module only by its edges and provide proper grounding, or you might damage the module through electrostatic discharge.

### Required Equipment

- Small Phillips screwdriver.

### Removal Procedure

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. On the bottom of the notebook, loosen the screws holding the SDRAM cover (the cover retains the screws), and remove the cover.
3. Press outward to release the latches at the sides of the SDRAM module, so that the free edge of the module pops up.
4. Carefully pull the module out of the connector.

Figure 2-5. Removing an SDRAM Module

### Reassembly Notes

- Carefully press the SDRAM module into the connector at an angle of about 30°, until it is fully inserted. Then press down on both sides of the module until the latches snap closed.

---

## Removing the Hard Disk Drive (User-Replaceable)

### Required Equipment

- Small Phillips screwdriver.

### Removal Procedure

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. On the bottom of the unit, remove the hard drive retaining screws.
3. Raise the cover on the end of the drive so that its retainer tab is free of the notebook case, then carefully pull the hard drive out of the computer.

**Figure 2-6. Removing the Hard Disk Drive**

4. Remove the screws from the drive and drive tray, then lift the drive out of the tray.
5. Notice that the hard drive has a pin connector attachment at one end. Carefully remove this connector from the end of the drive by working alternately at each end of the connector so that it slides off evenly without bending the connector pins.

**Figure 2-7. Removing the Hard Disk Tray**

#### **Reassembly Notes**

- Carefully put the pin connector back onto the pins on the end of the new hard drive. Work at each end alternately so that the connector slides on evenly without bending the pins.
- Slide the cover down into place so the retainer tab engages the notebook case.

#### **Important**

If you are installing a new hard disk drive, load the factory software and operating system on the drive as described in "Recovering the Factory Software," below.

## Recovering the Factory Software

The following procedure describes how to recover the notebook's original software and operating system. This process can take up to 15 minutes to complete. (For more information about recovering the factory software installation, see the file *readme.txt* in the root directory of the *Recovery CDs*.)

### Caution

Do not interrupt the following process or unplug the AC adapter until the process is complete.

1. Connect the AC adapter to the notebook. **This is necessary to provide an uninterrupted power source.**
2. Insert *Recovery CD* disk 1 into the notebook's CD/DVD drive. If the notebook is turned off, use a pin or straightened paper clip to press the release switch on the drive door to open it.
3. Turn on or restart the notebook.
4. When the HP logo appears, press Esc to display the Boot menu.
5. Use the arrow keys to select the CD/DVD drive as the first boot device, then press Enter.
6. When the *Recovery CD* dialog box appears, follow the displayed instructions. If prompted, accept the recommended partition size.

To create the Utility partition without installing the factory software, click Advanced and select not to install the operating system.

If the hard disk is partitioned into several drives, you can install the factory software on drive C without affecting other drives. Click Advanced and select to restore only the C partition.

7. When prompted to reboot the notebook, press Ctrl+Alt+Del and follow any instructions that appear.

---

## Removing Mini-PCI Card #1 (User-Replaceable)

Certain notebooks include a mini-PCI card under the mini-PCI cover on the bottom of the unit. (In addition, certain models may have a second mini-PCI card located under the motherboard—see the table on page 2-31.)

### Caution

Handle the mini-PCI card only by its edges and provide proper grounding, or you might damage the card through electrostatic discharge.

### Required Equipment

- Small Phillips screwdriver.

### Removal Procedure

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. Loosen the screw in the mini-PCI cover (the cover retains the screw), and remove the cover.

### Caution

Be careful when connecting and disconnecting cables from the mini-PCI card. Damaged cables or connectors can degrade performance.

3. Detach all cables from the card.
4. Release the latches at the sides of the card, so that its free edge pops up, and carefully pull the card out of its connector.

Figure 2-8. Removing the Mini-PCI Card

### Reassembly Notes

- Carefully press the mini-PCI card into the connector at about a 30° angle, until it is fully inserted. Then press down on both sides until the latches snap closed.

---

## Removing the Power Button Panel (User-Replaceable)

### Required Equipment

- Small flat-blade screwdriver.

### Removal Procedure

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. Carefully insert the screwdriver blade under the power button panel along the edge shown below, and gently pry up the center of the cover.
3. Insert a finger under the center of the panel, and lift the panel out.

**Figure 2-9. Removing the Power Button Panel**

### Reassembly Notes

- Insert the tabs on the left end of the panel into their slots in the top case, and press the panel into place.

---

## Replacing Small Parts (User-Replaceable)

The user can replace the following small parts.

**Table 2-4. Replacing Small Parts (User-Replaceable)**

| <b>Part</b>                                | <b>Replacement Procedure</b>   |
|--|--|
| <b>Cap, pointing stick</b>                 | Pull the cap off the pointing stick.   |
| <b>Bumpers, display (on display bezel)</b> | Insert a small flat-blade screwdriver under the bumper and pry it loose. To replace, firmly press the adhesive side of the bumper into the recess.   |
| <b>Cover, mini-PCI</b>                     | On the bottom of the computer, loosen the screw in the mini-PCI cover (the cover retains the screw) and remove the cover.  |
| <b>Cover, SDRAM</b>                        | On the bottom of the computer, loosen the one or two screws in the SDRAM module cover (the cover may retain the screws) and remove the cover.  |
| <b>Covers, screw (on display bezel)</b>    | Insert a pointed edge under the cover and pry it loose. To replace, press the adhesive side of the cover firmly into the recess.   |
| <b>Covers, left/right corner</b>           | From the bottom of the computer, remove the screws (M2.5x6mm) holding the corner covers, then remove the covers. The right cover may be easier to remove if you move the module release latch forward. |
| <b>Feet, rubber (on bottom of unit)</b>    | Insert a small flat-blade screwdriver under the foot and pry it loose. To replace, firmly press the adhesive side of the foot into the recess.   |

---

# Removing the Keyboard

(HP Authorized Service Providers Only)

## Required Equipment

- Small Phillips screwdriver.

## Removal Procedure

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. Remove the power button panel (page 2-11).
3. From the bottom of the unit, remove the single screw marked with a “K.”

### Warning

Be careful not to touch the heatsink until it has cooled. It could be hot if the computer was running recently.

4. Remove the four retaining screws from the tabs along the back end of the keyboard.

Figure 2-10. Removing the Keyboard

### Caution

Be careful not to pull on the cables connecting the keyboard to the computer.

5. Raise the back of the keyboard, then lift the keyboard out of the computer.

6. Lay the keyboard face down on the top case, forward of its normal position. Be careful not to pull on the cables.
7. Disconnect the keyboard cable (wide) from the motherboard, and release the pointing stick cable (narrow) if present.

**Figure 2-11. Unplugging the Keyboard Cables**

#### Reassembly Notes

##### **Caution**

Do not excessively bend or fold the keyboard cables.

- Lay the keyboard face down on the top case, forward of its normal position, then reconnect the keyboard cable and (if present) pointing stick flex cable.
- Slip the metal tabs on the bottom of the keyboard into their slots in the top case, then lower the keyboard into place.

---

# Removing the Heatsink (with Fan)

(HP Authorized Service Providers Only)

## Required Equipment

- Small Phillips screwdriver.
- Knife or scraper.

## Removal Procedure

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. Remove these additional assemblies:
  - Power button panel (page 2-11).
  - Keyboard (page 2-13).
3. Disconnect the fan cable. Access the cable through the opening in the heatsink (near the fan).
4. Remove all five retaining screws.

Figure 2-12. Removing the Heatsink

5. Raise the left end of the heatsink and lift it out of the unit.

**Caution**

Do not spin the fan blades with your finger, or you could damage the fan's bearings.

**Reassembly Notes****Caution**

Whenever you remove and reinstall the heatsink, you must also replace the heatsink's thermal pad to maintain optimum heat transfer. Use a sharp knife or scraper to carefully remove the old thermal pad from the heatsink, then attach the new thermal pad.

- Install the heatsink screws in this order:
  1. Install all five screws lightly.
  2. Tighten the three screws around the CPU.
  3. Tighten the two remaining screws.

---

# Removing the CPU Module

(HP Authorized Service Providers Only)

## Required Equipment

- Small Phillips screwdriver.
- Small flat-blade screwdriver.

## Removal Procedure

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. Remove these additional assemblies:
  - Power button panel (page 2-11).
  - Keyboard (page 2-13).
  - Heatsink (page 2-15).
3. Turn the lock screw one-half turn counterclockwise to release the CPU module, and carefully lift the CPU module off of its socket on the motherboard.

**Figure 2-13. Removing the CPU Module**

## Reassembly Notes

- Carefully insert the CPU module into the motherboard, and turn the lock screw one-half turn clockwise to secure the CPU module.
- The CPU module is keyed for installation, and can only be inserted one way.
- Be sure to replace the thermal pad on the heatsink, as described in the reassembly notes on page 2-16.

---

# Removing the Display Assembly

(HP Authorized Service Providers Only)

## Required Equipment

- Small Phillips screwdriver.

## Removal Procedure

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. Remove the power button panel (page 2-11).
3. Remove all four retaining screws from the back of the computer (two near the PS/2 port, and two near the AC adapter jack).
4. On the bottom of the notebook, remove the two screws from the rear corners (nearest the back edge).
5. Open the display. Remove the screws from the display ground wires, and disconnect the main cable.
6. Remove the screw from the center hinge cover, and from the left and right hinges.
7. Lift the display off of the notebook.

**Figure 2-14. Removing the Display**

### Reassembly Notes

#### **Important**

The label on the display cable indicates the display type.

- Before installing any screws, make sure the center hinge cover is in place and fits over the tab in the bottom case.

---

# Removing the Top Case

## (HP Authorized Service Providers Only)

### Required Equipment

- Small Phillips screwdriver.

### Removal Procedure

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. Remove these additional assemblies:
  - Plug-in module (page 2-5).
  - Hard disk drive (page 2-7).
  - Power button panel (page 2-9).
  - Keyboard (page 2-13).
  - Heatsink (page 2-15).
  - Display assembly (page 2-19).
3. From the bottom of the computer, remove the screws holding the left and right corner covers, then remove the covers. (The right corner cover may come off more easily if you slide the plug-in module latch forward.)
4. Remove all six retaining screws from the bottom case.
5. Remove both retaining screws from just inside the hard disk drive compartment.
6. Remove the single screw inside the battery compartment.
7. From the top of the computer, release the touch pad flex cable from its motherboard connector. (Certain models have a forked cable and two connectors.)

#### **Caution: Wireless Models**

Be careful not to pull on the cable from the rear antenna PCA.

8. **Wireless models only:** Remove the retaining screw from the rear antenna PCA, and detach the PCA by sliding it slightly to the left. (The PCA's cable is still attached to mini-PCI card #1. Unplug the cable only if you are replacing the PCA or removing the bottom case.)
9. Remove the three top case retaining screws: one to the right of the left speaker, and two to the left of the right speaker.
10. Raise the back of the top case, then lift it off the computer.

**Figure 2-15. Removing the Top Case**

### Reassembly Notes

- To reinstall the sound/IR panel, insert the tabs on the ends of the panel into the slots in the bottom case.
- When reinstalling the right corner cover, first insert the tab at the back end of the cover into the case, then slide the plug-in module latch forward and snap the cover over the latch and into place.
- **Wireless models only:** If you are replacing the rear antenna PCA, place the PCA in its position near the left hinge, replace the screw, then thread the cable through to the bottom of the computer and reconnect the cable to the mini-PCI card.

---

# Removing the Motherboard or Bottom Case

## (HP Authorized Service Providers Only)

### Required Equipment

- Small Phillips screwdriver.
- Small flat-blade screwdriver.

### Removal Procedure

#### **Note: Before Replacing the Motherboard**

If possible, record the computer's electronic serial number and service ID before you replace the motherboard. You will then store this information in the EEPROM on the new motherboard using the Service Utility floppy disk.

1. Download the service package for the Omnibook XT6050 (technology code EF) or Omnibook XT/VT6200 (technology code EG) from the Partnership web site (see page vi), and create a Service Utilities floppy disk as described in the package's Readme file.
2. Connect a floppy disk drive module: insert the module into the notebook, or connect it to the notebook's parallel port using an F2008 external floppy drive cable.
3. Connect an external monitor to the computer, so you can verify the boot process.
4. Plug in an AC adapter.
5. Insert the Service Utilities floppy disk into the floppy drive.
6. Turn on the notebook. When the HP logo appears (on either the built-in display or the external monitor), press Esc to display the boot menu, then choose Removable Device and boot from the floppy disk.
7. Select the Serial Number option from the boot menu.
8. When prompted, type A for the automatic update option. This stores the current system data from the old motherboard on the floppy disk.

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. Remove these additional assemblies:
  - Plug-in module (page 2-5).
  - Hard disk drive (page 2-7).
  - Power button panel (page 2-11).
  - Keyboard (page 2-13).
  - Heatsink (page 2-15).
  - Display assembly (page 2-19).
  - Top case (page 2-21).
3. Remove the five screws that attach the motherboard to the bottom case.
4. From the back of the unit, remove the screw from the LAN/modem PCI panel, and lift the panel out of the bottom case.

**Caution: Wireless Models**

Be careful when removing and attaching antenna cables. Damage to cables or connectors can degrade performance.

5. **Wireless models only:** Disconnect the front antenna PCA flex cable from the motherboard.
6. **Wireless models only:** Remove the mini-PCI cover and unplug the two antenna cables from mini-PCI card #1.
7. Lift the motherboard out of the bottom case.

**Figure 2-16. Removing the Motherboard**

8. Depending on what you are replacing, go to “Replacing the Motherboard” on page 2-26, or “Replacing the Bottom Case” on page 2-28.

## Reassembly Notes

- Reinstall the sound/IR panel before reinstalling the motherboard.
- If you need to install or replace the docking doors or PCMCIA doors, see the figures below.

### Wireless Models Only

- Before installing the motherboard, make sure the round coaxial cable from the front antenna PCA is held in place by the clips in the bottom case.
- Reconnect the front antenna PCA flex cable before reinstalling the top case. Make sure it lies in its groove in the bottom case (battery compartment).
- To reinstall the rear antenna PCA, place the PCA in its position near the left hinge, then replace the screw that attaches the PCA to the top case. Thread the PCA cable through the hole in the motherboard (at the lower left corner of the left speaker) to the bottom of the computer, and reconnect the cable to mini-PCI card #1.

Figure 2-17. Installing the Docking Doors

Figure 2-18. Installing the Lower PCMCIA Door

# Replacing the Motherboard

## Disassembly Procedure

1. If a mini-PCI panel is attached, disconnect the LAN/modem cables from the mini-PCI card or motherboard and remove the mini-PCI panel.
2. If mini-PCI card #1 is present, remove it: release the latches at the sides of the card, so that its free edge pops up, then carefully pull the card out of its connector.
3. If mini-PCI card #2 is present, remove it: release the latches at the sides of the card, so that its free edge pops up, then carefully pull the card out of its connector.
4. Disconnect the cable connecting the display interface PCA to the speaker assembly.
5. Carefully lift the display interface PCA off of its connector.
6. Remove the speaker assembly from the unit.
7. Carefully lift the volume PCA off of its connector.
8. Turn the lock screw one-half turn counterclockwise to release the CPU module, and remove the CPU module from the motherboard.
9. From underneath the motherboard, remove the two retaining screws from the PC card socket and lift the socket off the connector.

Figure 2-19. Replacing Motherboard Components

## Reassembly Procedure

### **Note: Reprogramming the BIOS IC**

A new BIOS IC contains only enough basic programming to enable the notebook to boot. After installing a new motherboard, you must reprogram the BIOS IC, preferably with the latest BIOS—see page 2-29.

1. Transfer the following components from the old motherboard onto the new motherboard:

- SDRAM module
- speaker assembly
- display interface PCA
- volume PCA
- CPU module
- PCMCIA socket
- mini-PCI card #1 (if present)
- mini-PCI card #2 (if present)

2. Follow the reassembly notes in the section entitled “Removing the Motherboard or Bottom Case” on page 2-25.

### **Note: After Replacing the Motherboard**

After replacing the motherboard, you must use the Service Utility floppy disk to store the system data and display information in the EEPROM on the new motherboard.

1. Connect a floppy disk drive module: insert the module into the notebook, or connect it to the computer using an F2008 external floppy drive cable.
2. Plug in an AC adapter.
3. Insert the Service Utilities floppy disk in the floppy drive.
4. Turn on the computer.
5. If you hear 5 beeps, press F1 to update the display data stored on the motherboard. Let the computer reboot and go to the next step.
6. Select the Serial Number option from the boot menu.
7. If you successfully stored system data on the floppy disk before removing the old motherboard, type A for the automatic update. This restores the old system data on the new motherboard.

If you did not store system data, type M for the manual update option. Enter the serial number from the bottom of the unit—you may have to contact an HP support center to do this.

## Replacing the Bottom Case

### Installation Procedure

1. Transfer the SDRAM cover and sound/IR panel from the old bottom case to the new bottom case.
2. Install a new Microsoft Product ID label.
3. Transfer the old serial number label and install a new overlay, or create a new serial number label using the steps below.
4. Follow the “Reassembly Notes” on page 2-24.

### Installing a New Serial Number Label

Download the latest version of the serial number label template (Microsoft Word format) from the Partnership web site (see page vi) under Support/Service in Technical Support Information. The latest version includes fields for warranty period and manufacturing location. Store the template with other Word templates on a PC connected to a laser printer.

1. Open a new document based on the serial label template.
2. Enter the information from the old serial label, and print the new label on plain white paper. The new label does not have barcodes.
3. Carefully cut out the new serial label just inside the border and place it into the inner recess in the bottom case. The bottom of the label goes toward the front of the case.
4. While holding the paper label in place, attach a serial label overlay into the outer recess. The overlay covers and protects the serial label.
5. Make sure all regulatory labels that were on the old bottom case are also on the new bottom case. You can do this by keeping the old covers, if necessary.

**Figure 2-20. Example of Serial Number Label**

---

# Repairing the BIOS IC

## (HP Authorized Service Providers Only)

The notebook's BIOS IC cannot be replaced separately. If it is defective, you must replace the motherboard. In some cases, however, you may be able to reprogram a malfunctioning BIOS IC using either e-DiagTools for Windows, a BIOS floppy disk, or a Crisis Recovery floppy disk.

If the notebook will boot sufficiently, use e-DiagTools for Windows or a BIOS floppy disk to reprogram the BIOS IC. If you cannot boot the notebook adequately, use a Crisis Recovery floppy disk. See below for instructions for all three methods.

### Caution

The BIOS update completely replaces the previous BIOS, so follow the directions in this section **exactly** or you might damage the notebook. The BIOS update also resets the configurations in the BIOS Setup utility—except for BIOS passwords—so record these before performing the update.

### Using a BIOS Floppy Disk

Use a BIOS floppy disk to update the notebook's BIOS as follows:

1. Undock the notebook if it is docked, and remove any PC cards from it.
2. Connect a floppy disk drive module: insert the module into the notebook, or connect it to the notebook's parallel port using an F2008 external floppy drive cable.
3. Connect the AC adapter to the notebook.
4. Insert the BIOS floppy disk into the floppy drive.
5. Turn on the notebook. When the notebook boots, follow the instructions that appear on screen.
6. When the process is completed, press the system-off switch to reset the system.

BIOS updates are also available from the HP Business Support web site ([www.hp.com/go/bizsupport](http://www.hp.com/go/bizsupport)). Installation utilities and instructions for creating a BIOS floppy disk are provided with the updates.

### Using e-DiagTools for Windows

If the notebook allows you to boot into Windows, you may be able to use e-DiagTools for Windows to update the notebook's BIOS as follows:

1. In Windows, exit any programs that are running.
2. Undock the notebook if it is docked, and remove any PC cards from it.
3. Connect the AC adapter to the notebook.
4. Connect any cables or equipment needed to connect to the Internet.
5. Click Start, Programs (or All Programs), HP e-DiagTools, e-DiagTools for Windows.
6. Click Update, select Download New and click OK. Follow the instructions that appear. **Once the update process begins, do not interrupt it.**

The first time you make an Internet connection from this program on a particular unit, click Change Settings in the Connect window to define your connection settings.

7. When the process is completed, press the system-off switch to reset the system.

## Using a Crisis Recovery Floppy Disk

If you do not have a BIOS Crisis Recovery floppy, download the package from the Partnership web site (see page vi) under Product Support Information in the Service and Support Library. Follow the instructions for creating the floppy.

### Caution

Make sure to use the correct BIOS Crisis Recovery floppy for the Omnibook model you are repairing. The program does not verify the Omnibook model, so you could accidentally install the wrong BIOS.

1. Insert the BIOS Crisis Recovery disk in the floppy disk drive.
2. Turn on the computer and allow it to boot from the floppy disk.

If the notebook does not turn on at all, do the following to boot from the floppy disk:

- a. Unplug the AC adapter.
- b. Press and hold Fn+B.
- c. Plug in the AC adapter.
- d. Release Fn+B.

**Note:** If the notebook will not boot from the floppy, try plugging the boot-block jumper into the notebook's parallel port. See the wiring diagram below.

**Figure 2-21. Boot-Block Jumper**

3. The display goes blank for a minute or more while the BIOS is reprogrammed.

**Note:** If you plugged in a boot block jumper, unplug it before the notebook automatically reboots.

4. After the BIOS is reprogrammed, check the BIOS version to make sure it is the latest version. If necessary, download the latest BIOS version and reprogram the BIOS IC.

# Removing Other Components

(HP Authorized Service Providers Only)

## Required Equipment

- Small Phillips screwdriver.
- Small flat-blade screwdriver.

## Removal Procedure

1. Unplug the AC adapter, if present, and remove the battery and any secondary battery module.
2. Remove the assemblies and follow the additional steps given in the table below.

**Table 2-5. Removing Omnibook Components**

| Component                  | Removal Procedure  | Additional Steps   |
|----------------------------|--|--|
| <b>Battery, CMOS</b>       | Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).  | <b>Reassembly Notes:</b> After replacing the CMOS battery, set the correct time and date using the BIOS Setup utility or Date/Time in the Control Panel. |
| <b>Card, mini-PCI #2</b>   | Plug-in module (page 2-5).<br>Hard disk drive (page 2-7).<br>Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).<br>Display assembly (page 2-19).<br>Top case (page 2-21).<br>Motherboard (page 2-23). | The card is attached to the underside of the motherboard. Release the two latches at the sides of the card so the free edge of the card pops up.         |
| <b>Case, bottom</b>        | See page 2-23.   |  |
| <b>Case, top</b>           | See page 2-21.   |  |
| <b>Cover, center hinge</b> | Power button panel (page 2-11).<br>Display assembly (page 2-19).   | <b>Reassembly Note:</b> Make sure the center hinge cover fits over the tab in the bottom case.   |
| <b>CPU module</b>          | See page 2-17.   |  |
| <b>Display assembly</b>    | See page 2-19.   |  |
| <b>Doors, docking</b>      | Plug-in module (page 2-5).<br>Hard disk drive (page 2-7).<br>Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).<br>Display assembly (page 2-19).<br>Top case (page 2-21).                             | See the figure on page 2-25.   |

| Component  | Removal Procedure  | Additional Steps  |
|--|--|---|
| <b>Doors, PCMCIA</b>                             | Plug-in module (page 2-5).<br>Hard disk drive (page 2-7).<br>Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).<br>Display assembly (page 2-19).<br>Top case (page 2-21). | See the figure on page 2-25.  |
| <b>Heatsink (with fan)</b>                       | See page 2-15.   |   |
| <b>Keyboard</b>                                  | See page 2-13.   |   |

| <b>Panel, mini-PCI</b>                           | Plug-in module (page 2-5).<br>Hard disk drive (page 2-7).<br>Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).<br>Display assembly (page 2-19).<br>Top case (page 2-21). | On the rear of the computer, remove the screw at the far left end (nearest the mini-PCI panel). Detach the cables from mini-PCI card and motherboard. |
| <b>PCA, display interface</b>                    | Plug-in module (page 2-5).<br>Hard disk drive (page 2-7).<br>Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).<br>Display assembly (page 2-19).<br>Top case (page 2-21). | Unplug the speaker cable, and carefully lift the PCA off of its connector.  |
| <b>PCA, front antenna (wireless models only)</b> | Plug-in module (page 2-5).<br>Hard disk drive (page 2-7).<br>Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).<br>Display assembly (page 2-19).<br>Top case (page 2-21). | Disconnect the front antenna PCA flex cable from the motherboard, and the coaxial cable from the mini-PCI card (see Figure 2-19 on page 2-26).        |

| Component                                       | Removal Procedure  | Additional Steps   |
|---|--|--|
| <b>PCA, motherboard</b>                         | See page 2-23.   |  |
| <b>PCA, rear antenna (wireless models only)</b> | Plug-in module (page 2-5).<br>Hard disk drive (page 2-7).<br>Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).<br>Display assembly (page 2-19).<br>Top case (page 2-21). | <ol style="list-style-type: none"> <li>1. Remove the retaining screw from the rear antenna PCA, and detach the PCA by sliding it slightly to the left.</li> <li>2. On the bottom of the computer, loosen the screw holding the mini-PCI cover (the cover retains the screw), and remove the cover.</li> <li>3. Disconnect the cable from the mini-PCI card, and remove the PCA from the computer.</li> </ol> <p><b>Reassembly Notes:</b> Place the PCA in its position near the left hinge, replace the screw, then thread the cable through to the bottom of the computer and reconnect the cable to the mini-PCI card.</p> |
| <b>PCA, volume</b>                              | Plug-in module (page 2-5).<br>Hard disk drive (page 2-7).<br>Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).<br>Display assembly (page 2-19).<br>Top case (page 2-21). | Remove the screw from the PCA, and carefully lift it off of its connector.   |
| <b>Socket, PCMCIA</b>                           | Plug-in module (page 2-5).<br>Hard disk drive (page 2-7).<br>Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).<br>Display assembly (page 2-19).<br>Top case (page 2-21). | <ol style="list-style-type: none"> <li>1. On the bottom of the computer, loosen the screw holding the mini-PCI cover (the cover retains the screw), and remove the cover.</li> <li>2. Remove both screws (M2x4mm) from inside the mini-PCI compartment.</li> <li>3. Remove the two screws attaching the socket to the motherboard (see Figure 2-16 on page 2-24).</li> <li>4. Unplug the PCMCIA socket from the motherboard.</li> </ol>  |
| <b>Speaker assembly</b>                         | Plug-in module (page 2-5).<br>Hard disk drive (page 2-7).<br>Power button panel (page 2-11).<br>Keyboard (page 2-13).<br>Heatsink (page 2-15).<br>Display assembly (page 2-19).<br>Top case (page 2-21). | <ol style="list-style-type: none"> <li>1. Disconnect the cable from the display interface PCA.</li> <li>2. Lift the display interface PCA out of the notebook.</li> <li>3. Lift the speaker assembly out of the notebook.</li> </ol>   |

## Troubleshooting and Diagnostics

---

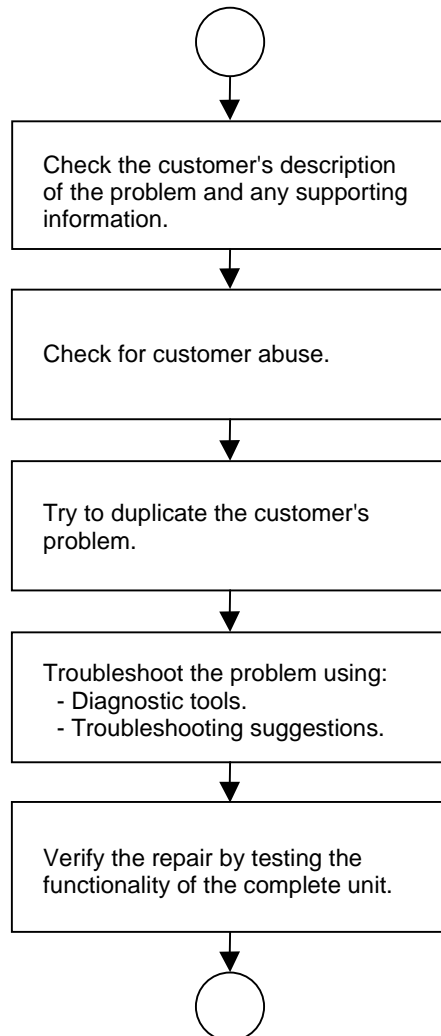

This chapter includes troubleshooting and diagnostic information for testing the functionality of the notebook, and for identifying faulty components:

- Troubleshooting information
  - Checking for customer abuse (page 3-3).
  - Troubleshooting the problem (page 3-3).
  - Verifying the repair (page 3-4).
  - Suggestions for troubleshooting (page 3-5).
- Diagnostic tools
  - e-Diagtools diagnostic program (page 3-19).
  - Power-on self-test (page 3-23).
  - Sycard PCCtest 450/460 PC card (page 3-27).
  - Windows Management Instrumentation/Desktop Management Interface (page 3-28).
  - BIOS Setup utility (page 3-29).

---

# Troubleshooting

The suggestions in this section can help isolate and repair the cause of a problem. To ensure quality repair, follow the basic troubleshooting steps shown below.

**Figure 3-1. Basic Troubleshooting Steps**

## Checking for Customer Abuse

Some units may appear to have been damaged by customer abuse. Use these guidelines to help determine if this is the case:

- If the shipping box is seriously damaged, customer abuse *cannot* be declared.
- If the damage *could have* a cause other than customer abuse, customer abuse *cannot* be declared.
- If the unit shows any of the following, customer abuse is declared:
  - Missing parts.
  - Broken plastic parts.
  - Parts not original to the unit.
  - Damaged or missing keys on the keyboard.

Table 3-2 includes additional criteria for determining customer abuse to specific parts of the unit.

### Important

Parts damaged by customer abuse are not covered by the warranty.

## Troubleshooting the Problem

Record pertinent information about the unit:

- Model and serial number.
- Operating system and version.
- Software version (stored in hidden file c:\version.inf).
- BIOS version.
- Accessories and peripherals used.

Analyze the problem:

- **Observe Symptoms.** Using the customer's information, try to duplicate the problem. Determine how the problem differs from proper behavior. Also, note the functions that *do* work properly.
- **Separate Problems.** If there are multiple symptoms, separate them into distinct problems.
- **Consider Causes.** Keep in mind possible causes for each problem. Use the diagnostic tools and troubleshooting suggestions to help find possible causes.
  - The e-Diagtools diagnostic program tests most of the notebook's components using automatic and interactive tests, and will be your primary troubleshooting tool. Other tools include the power-on self-test, WMI/Toptools (if installed), the BIOS Setup utility, and the Sycard PCCtest. Table 3-1 on page 3-5 shows how you can use these tools to isolate the cause of the computer's problem.
  - The troubleshooting suggestions on page 3-6 include general suggestions for repairing units that show specific failure symptoms.

Swapping modules that may be defective with others known to be good is generally an ideal way to find the module responsible for the problem. A failure symptom is rarely caused by more than one module, so you will not usually need to replace more than one to correct a particular failure.

After you replace a module, the notebook will normally be in a confused state and lock up when you apply power. If this happens, press the system-off switch: this resets the notebook, so that you can restart it in a known state.

## Verifying the Repair

Before returning the repaired unit to the customer, verify the repair by running the following tests:

- **e-Diagtools Basic Diagnostic Test.** Run the basic test of the e-Diagtools diagnostic program (page 3-19).  
–and–
- **Function Tests.** Run tests that check the repaired function, such as those in e-Diagtools (page 3-19).  
–and–
- **Failed Tests.** Run any other tests that failed during troubleshooting.

## Suggestions for Troubleshooting

Table 3-1. Scope of Diagnostic Tools

| Function                | e-Diagtools                      | Power-On Self-Test        | Sycard PCCTest 450 | DMI/WM/Toptools (if installed) | BIOS Setup |
|-------------------------|----------------------------------|---------------------------|--------------------|--------------------------------|------------|
| <b>Bootup</b>           |                                  | Tests                     |                    | Describes                      | Configures |

| <b>Pointer</b>          | Tests (Misc menu)                |                           |                    | Describes                      |            |
| <b>Audio</b>            | Tests (System, Misc menus)       |                           |                    |                                |            |
| <b>Serial</b>           | Tests* (Misc menu)               |                           |                    | Describes                      | Configures |
| <b>Parallel</b>         | Tests* (Misc menu)               |                           |                    | Describes                      | Configures |
| <b>LAN</b>              | Tests* (Misc menu)               |                           |                    | Describes                      | Configures |
| <b>Modem</b>            | Tests** (User menu)              |                           |                    |                                | Configures |
| <b>Wireless</b>         |                                  |                           |                    |                                | Configures |
| <b>Infrared</b>         |                                  |                           |                    | Describes                      | Configures |
| <b>PS/2 port</b>        | Tests† (KBD, Misc menus)         |                           |                    |                                | Configures |
| <b>USB</b>              | Tests† (USB menu)                |                           |                    | Describes                      | Configures |
| <b>Docking port</b>     | Tests (System menu, using docks) |                           |                    |                                |            |
| <b>PCMCIA</b>           | Tests*† (Misc menu)              |                           | Tests              | Describes                      |            |
| <b>AC adapter</b>       |                                  |                           |                    | Status                         |            |
| <b>Docking products</b> | Tests ports and internal bus     |                           |                    | Status                         | Configures |
| <b>Plug-in modules</b>  |                                  |                           |                    | Describes                      |            |

\* The diagnostic test is more thorough if you use a loop-back connector.

\*\* The test checks only the internal hardware up to the mini-PCI card, and does not check the mini-PCI panel or any external cabling.

† Use an appropriate external device to exercise the port. See the help text for the tests in the menu.

If you cannot isolate the cause of a problem using the above diagnostic tools, use the suggestions in the following table to help find the problem.

**Table 3-2. Troubleshooting Suggestions**

| Symptom   | Call Center:<br>Suggestions   | Repair Center:<br>Likely Causes  | Repair Center:<br>Comments  |
|---|---|--|---|
| To help determine likely causes of a problem, determine which replaceable modules are involved in the system function and what roles they play: see the figure on page 1-14 and the table on page 1-15. |   |  |   |
| <b>Startup</b>  |   |  |   |
| Does not boot on AC or battery.   | <p>Check power source.</p> <p>Press system-off switch to reset notebook, then press blue sleep button to turn notebook on.</p> <p>Unplug AC adapter, remove all batteries and any PC cards, press system-off switch to reset notebook, then reconnect power and try again.</p> <p>Do not use touch pad while booting or resuming.</p> <p>Remove all but one SDRAM module and try again.</p> <p>Reinsert any other SDRAM module and try again.</p> | <p>AC adapter.</p> <p>SDRAM module.</p> <p>CPU module.</p> <p>Display interface PCA.</p> <p>Motherboard.</p> <p>Display assembly.</p> <p>Hard drive.</p> | <p>Check AC adapter. Remove all but one SDRAM module and try again.</p> <p>If power status light does not turn on, reprogram BIOS, replace top case, replace motherboard.</p> <p>If power status light turns on but display remains off, try external monitor. If monitor shows successful boot, replace display assembly. If monitor shows activity but BIOS does not complete, replace display assembly. If monitor is blank, replace display interface PCA, replace display assembly, replace motherboard.</p> <p>If power status light and display turn on, BIOS completes, but OS does not start from hard disk or floppy drive, replace CPU module, replace motherboard. If OS starts from floppy drive, reload hard drive, replace hard drive.</p> |
| Beeps once, spins hard disk, repeats, but does not boot.  | Make sure at least one SDRAM module is installed.   | SDRAM module.  |   |
| Does not boot on battery, but boots on AC.  | <p>Make sure battery is properly installed and fully charged.</p> <p>Check battery level on battery LEDs.</p> <p>Check battery contacts. If available, try another battery.</p>   | <p>Battery or contacts.</p> <p>Motherboard.</p>  |   |
| Does not boot from floppy drive.  | <p>Make sure floppy disk is bootable.</p> <p>Make sure floppy drive is installed or connected correctly.</p> <p>Use BIOS Setup to check default boot order and make sure floppy boot is enabled.</p> <p>Try using alternate connection (with or without floppy cable).</p>  | <p>Floppy drive or contacts.</p> <p>Floppy cable.</p> <p>Motherboard.</p>  |   |

| Symptom  | Call Center:<br>Suggestions  | Repair Center:<br>Likely Causes                                  | Repair Center:<br>Comments   |
|--|--|--|--|
| Does not boot from CD in CD/DVD drive module                     | Make sure CD is bootable. Use BIOS Setup to check default boot order. Restart notebook.  | CD/DVD drive module.<br>Motherboard.                             |  |
| Sluggish startup or shutdown.                                    | Use Tools tab in disk's Properties sheet to check hard disk. Use Disk Defragmenter to optimize hard disk. Delete temporary and unneeded files.   | Hard drive.  |  |
| Does not boot into POST.   | Try removing wireless mini-PCI card.   | Mini-PCI card.   | Replace mini-PCI card.   |
| Error message such as "Invalid system disk" or "Auto IDE error". | Check for disk in floppy drive. Check boot order in BIOS Setup. Remove and reinstall hard drive.   | Hard drive contacts.<br>Hard drive.                              | If unit boots from floppy drive, check for corrupt files on hard drive, use <i>Recovery CDs</i> to reinstall factory software onto hard drive, replace hard drive. |
| Password forgotten.  | Verify proper ownership, then follow removal procedure with owner and record appropriate data—see page 5-1.  |  | User must call Technical Support and provide proof of ownership. Password removal is restricted to certain sites. See page 5-1.                                    |
| <b>Power</b>   |  |  |  |
| No power.  | Make sure charged battery is installed or AC adapter connected. Try another battery or AC adapter if available.  | AC adapter.<br>Battery.<br>Motherboard.                          |  |
| Turns off immediately after turning on.                          | Battery may be extremely low. Plug in AC adapter, insert charged battery, or plug in secondary battery module (OB XT/VT6200).  | Battery.   |  |
| Does not run on battery; empty battery indication.               | Check battery and contacts. Try another battery if available.  | Battery or contacts.<br>Motherboard.                             |  |
| Beeps repeatedly.  | Notebook beeps repeatedly when battery is low. Connect AC adapter or replace battery.  | Battery.   |  |
| Battery does not charge.   | Make sure AC adapter is connected properly and battery installed properly. Check battery contacts. If available, try another battery and AC adapter. Move notebook away from any nearby heat source. Unplug AC adapter and allow battery to cool. Check for blocked air vents. | Battery or contacts.<br>AC adapter.<br>Motherboard.<br>Heatsink. | Check battery and AC adapter.<br>Check heatsink.   |

|--|---|------------------------------|-------------------------|
| Battery indicator is inaccurate.                         | Time Remaining is an estimate based on notebook's power use at that moment. It therefore depends on current task, and assumes power will be used at that rate until battery runs out. So if notebook is currently using good deal of power (such as when reading CD or DVD), Time Remaining likely shows less time than actually remains. |                              |                         |
| <b>Standby/resume</b>                                    |   |                              |                         |
| General problems.  | Close all applications before entering (or allowing notebook to enter) Standby or Hibernate mode.<br>If problem appears after installing new software (including drivers), uninstall that software. Contact software vendor for additional support.   |                              |                         |
| Notebook resumes slowly from Standby mode.               | Notebook can take a minute or longer to resume if network card is installed. Blinking cursor appears while system is loading and checking hardware and network connections. When hardware is reinitialized, Windows desktop appears.  |                              |                         |
| Does not suspend to Standby mode as expected.            | Notebook won't suspend if connection to another computer is active.<br>If notebook is busy, it normally finishes current operation before suspending.   |                              |                         |
| Does not automatically enter Hibernate mode as expected. | Make sure hibernate support is enabled in Power in Control Panel. Also, make sure Hibernate timeouts (Power Schemes tab) for AC and battery power are not set to Never.   |                              |                         |

## Running e-Diagtools

The following steps describe how to run e-Diagtools. The procedure may differ slightly for different versions of e-Diagtools.

1. Restart the computer.
2. When the HP logo appears, press F10 to start the diagnostic test.
3. When the menu appears, press Enter to run e-Diagtools.
4. The first time you run the program, you are prompted to select the language for the program.
5. Press F2 to proceed with the basic tests.

You can also proceed directly to the advanced tests from this point by pressing Ctrl-F9 (in which case skip to step 10, below).

6. When the hardware detection finishes, check the list of detected hardware.

### Note

If a device is not detected or fails its test, it might be configured incorrectly in the notebook's BIOS. You can confirm this by running BIOS Setup and checking the settings—see "BIOS Setup Utility" on page 3-29.

7. **Run the basic test.** Press F2 to start the basic hardware test.
8. To exit without running the advanced tests, press F4 to view the Support Ticket. Press F3 to exit.
9. **Optional: Run the advanced tests.** Press F2 to open the advanced test screen.
10. Select and run the appropriate tests. Note that individual tests do not appear if the hardware they test is not detected. Press the following keys to run tests:

|             |  |
|-------------|--|
| Enter       | Runs the highlighted test.                   |
| F5 or Space | Marks/unmarks the highlighted test.          |
| F6          | Marks/unmarks all tests in the current menu. |
| F7          | Marks/unmarks all tests in all menus.        |
| F10         | Runs all marked tests.                       |

(Press F9 for a list of all function keys.)

If a test fails, the error code and description are logged, and the error code is displayed temporarily. If several errors occur, look for patterns that might indicate a common cause.
11. **Save the Support Ticket.** Press T to update and display a Support Ticket containing system and test information.
12. When you are finished running tests, press Esc to exit the advanced tests.
13. **Optional:** To save the Support Ticket to a floppy disk, press F7 then Alt+C.
14. **Exit.** Press F3 and then any key to exit and restart the notebook.
15. **Optional: Open the Support Ticket.** In Windows, click Start, Programs (or All Programs), Hewlett-Packard, Notebook, HP e-DiagTools, e-DiagTools for Windows.
16. Click View to display the Support Ticket.
17. To add information about the problem, click Comments and type the information, then click OK.

To save or print the Support Ticket, click Save As or Print.

Note that the serial and parallel port tests are more thorough if you connect a loop-back connector to the port and enable the external loopback option before running the test for that port. See the wiring diagrams below.

**Figure 3-3. Serial and Parallel Loopback Connectors**

## Interpreting the Results

The e-Diagtools diagnostic program returns test groups, error codes, and suggestions for repair and/or follow-up actions. The basic hardware test will show a recommended replacement part, while the advanced tests also provide more detailed error descriptions.

To help interpret the results of the e-Diagtools tests, refer to the following:

- e-Diagtools online help
- Replaceable Module Diagram on page 1-14
- Functional Structure Description on page 1-15

This combined information should enable you to determine which of the notebook's components require service.

## Power-On Self-Test

### Note

If Quiet Boot is enabled in BIOS Setup (the default setting), press Esc during boot to see POST messages.

When the notebook boots, its system BIOS runs a series of initialization routines and diagnostic tests called POST (Power-On Self-Test). The BIOS will not boot the notebook's operating system if certain components fail the POST diagnostic tests. POST indicates progress by a sequence of codes; if an error occurs, the BIOS displays a message and/or issues a beep code.

Note that not all POST messages indicate a failure in the notebook—some messages are for information only. You should not necessarily interpret the failure of one or more POST tests as a hardware, software, or firmware failure. If POST displays an error message or issues a beep code indicating an error, *confirm the problem using other diagnostic tools*.

First, confirm the failure by performing a “clean” boot, as described below: If the notebook fails to restart with a clean boot, it requires repair.

1. Remove all accessories, including SDRAM modules, floppy drive, port replicator, PC cards, printer, external monitor, pointing device, and keyboard.
2. Provide “clean” AC power—no auto adapter or unusual AC adapter configuration.
3. Press the system-off switch to return the notebook to a known state.
4. Press the blue sleep button to start the notebook.

If the BIOS detects a terminal error condition, it halts POST after issuing a beep code and/or displaying a message (see the following table). The beep code indicates the POST routine in which the terminal error occurred.

**Table 3-3. POST Terminal-Error Beep Codes**

| Beep Codes* | Error Code | POST Description                                   | Beep Codes* | Error Code | POST Description  |
|-------------|------------|--|-------------|------------|---|
| 1           | B4h        | One short beep before boot.                        | 1-3-1-1     | 20h        | Test DRAM refresh.  |
| 1-2         | —          | Search for option ROMs.                            | 1-3-1-3     | 22h        | Test 8742 Keyboard Controller (on motherboard).           |
| 1-1-1-3     | 02h        | Verify Real Mode.                                  | 1-3-2-1     | 24h        | Set ES segment register to 4 GB.                          |
| 1-1-1-4     | 03h        | Disable Non-Maskable Interrupt (NMI).              | 1-3-3-1     | 28h        | Auto size DRAM; or wrong type or no RAM installed.        |
| 1-1-2-1     | 04h        | Get CPU type.                                      | 1-3-3-2     | 29h        | Initialize POST Memory Manager.                           |
| 1-1-2-3     | 06h        | Initialize system hardware.                        | 1-3-3-3     | 2Ah        | Clear 512 kB base RAM.                                    |
| 1-1-2-4     | 07h        | Disable shadow and execute code from ROM.          | 1-3-4-1     | 2Ch        | RAM failure on address line xxxx.                         |
| 1-1-3-1     | 08h        | Initialize chipset with initial POST values.       | 1-3-4-3     | 2Eh        | RAM failure on data bits xxxx of low byte of memory bus.  |
| 1-1-3-2     | 09h        | Set IN POST flag.                                  | 1-3-4-4     | 2Fh        | Enable cache before system BIOS shadow.                   |
| 1-1-3-3     | 0Ah        | Initialize CPU registers.                          | 1-4-1-1     | —          | RAM failure on data bits xxxx of high byte of memory bus. |
| 1-1-3-4     | 0Bh        | Enable CPU cache.                                  | 1-4-1-3     | 32h        | Test CPU bus-clock frequency.                             |
| 1-1-4-1     | 0Ch        | Initialize caches to initial POST values.          | 1-4-1-4     | 33h        | Initialize Phoenix Dispatch Manager.                      |
| 1-1-4-3     | 0Eh        | Initialize I/O component.                          | 1-4-2-3     | 36h        | Warm start shut down.                                     |
| 1-1-4-4     | 0Fh        | Initialize local bus IDE.                          | 1-4-3-1     | 38h        | Shadow system BIOS ROM.                                   |
| 1-2-1-1     | 10h        | Initialize Power Management.                       | 1-4-3-3     | 3Ah        | Auto size cache.  |
| 1-2-1-2     | 11h        | Load alternate registers with initial POST values. | 1-4-4-1     | 3Ch        | Advanced configuration of chipset registers.              |
| 1-2-1-3     | 12h        | Restore CPU control word during warm boot.         | 1-4-4-2     | 3Dh        | Load alternate registers with CMOS values.                |
| 1-2-1-4     | 13h        | Initialize PCI Bus Mastering devices.              | 2-1-1-2     | 41h        | Initialize extended memory for RomPilot.                  |
| 1-2-2-1     | 14h        | Initialize keyboard controller.                    | 2-1-1-3     | 42h        | Initialize interrupt vectors.                             |
| 1-2-2-3     | 16h        | BIOS ROM checksum.                                 | 2-1-2-2     | 45h        | POST device initialization.                               |
| 1-2-2-4     | 17h        | Initialize cache before memory Auto size.          | 2-1-2-3     | 46h        | Check ROM copyright notice.                               |
| 1-2-3-1     | 18h        | 8254 timer initialization.                         | 2-1-2-4     | 47h        | Initialize I20 support.                                   |
| 1-2-3-3     | 1Ah        | 8237 DMA controller initialization.                |             |            |   |
| 1-2-4-1     | 1Ch        | Reset Programmable Interrupt Controller.           |             |            |   |

| Beep Codes* | Error Code | POST Description                                       |
|-------------|------------|--|
| 2-1-3-1     | 48h        | Check video configuration against CMOS.                |
| 2-1-3-2     | 49h        | Initialize PCI bus and devices.                        |
| 2-1-3-3     | 4Ah        | Initialize all video adapters in system.               |
| 2-1-3-4     | 4Bh        | QuietBoot start (optional).                            |
| 2-1-4-1     | 4Ch        | Shadow video BIOS ROM.                                 |
| 2-1-4-3     | 4Eh        | Display BIOS copyright notice.                         |
| 2-1-4-4     | 4Fh        | Initialize MultiBoot.                                  |
| 2-2-1-1     | 50h        | Display CPU type and speed.                            |
| 2-2-1-2     | 51h        | Initialize EISA board.                                 |
| 2-2-1-3     | 52h        | Test keyboard.   |
| 2-2-2-1     | 54h        | Set key click if enabled.                              |
| 2-2-2-2     | 55h        | Enable USB devices.                                    |
| 2-2-3-1     | 58h        | Test for unexpected interrupts.                        |
| 2-2-3-2     | 59h        | Initialize POST display service.                       |
| 2-2-3-3     | 5Ah        | Display prompt "Press F2 to enter SETUP".              |
| 2-2-3-4     | 5Bh        | Disable CPU cache.                                     |
| 2-2-4-1     | 5Ch        | Test RAM between 512 and 640 kB.                       |
| 2-3-1-1     | 60h        | Test extended memory.                                  |
| 2-3-1-3     | 62h        | Test extended memory address lines.                    |
| 2-3-2-1     | 64h        | Jump to UserPatch1.                                    |
| 2-3-2-3     | 66h        | Configure advanced cache registers.                    |
| 2-3-2-4     | 67h        | Initialize Multi Processor APIC.                       |
| 2-3-3-1     | 68h        | Enable external and CPU caches.                        |
| 2-3-3-2     | 69h        | Set up System Management Mode (SMM) area.              |
| 2-3-3-3     | 6Ah        | Display external L2 cache size.                        |
| 2-3-3-4     | 6Bh        | Load custom defaults (optional).                       |
| 2-3-4-1     | 6Ch        | Display shadow-area message.                           |
| 2-3-4-3     | 6Eh        | Display possible high address for UMB recovery.        |
| 2-4-1-1     | 70h        | Display error messages.                                |
| 2-4-1-3     | 72h        | Check for configuration errors.                        |
| 2-4-2-3     | 76h        | Check for keyboard errors.                             |
| 2-4-4-1     | 7Ch        | Set up hardware interrupt vectors.                     |
| 2-4-4-2     | 7Dh        | Initialize Intelligent System Monitoring.              |
| 2-4-4-3     | 7Eh        | Initialize coprocessor if present.                     |
| 3-1-1-1     | 80h        | Disable onboard Super I/O ports and IRQs.              |
| 3-1-1-2     | 81h        | Late POST device initialization.                       |
| 3-1-1-3     | 82h        | Detect and install external RS232 ports.               |
| 3-1-1-4     | 83h        | Configure non-MCD IDE controllers.                     |
| 3-1-2-1     | 84h        | Detect and install external parallel ports.            |
| 3-1-2-2     | 85h        | Initialize PC-compatible PnP ISA devices.              |
| 3-1-2-3     | 86h        | Re-initialize onboard I/O ports.                       |
| 3-1-2-4     | 87h        | Configure Motherboard Configurable Devices (optional). |
| 3-1-3-1     | 88h        | Initialize BIOS Data Area.                             |
| 3-1-3-2     | 89h        | Enable Non-Maskable Interrupts (NMIs).                 |
| 3-1-3-3     | 8Ah        | Initialize Extended BIOS Data Area.                    |
| 3-1-3-4     | 8Bh        | Test and initialize PS/2 mouse.                        |
| 3-1-4-1     | 8Ch        | Initialize floppy controller.                          |
| 3-1-4-4     | 8Fh        | Determine number of ATA drives (optional).             |
| 3-2-1-1     | 90h        | Initialize hard-disk controllers.                      |
| 3-2-1-2     | 91h        | Initialize local-bus hard-disk controllers.            |
| 3-2-1-3     | 92h        | Jump to UserPatch2.                                    |
| 3-2-1-4     | 93h        | Build MPTABLE for multi-processor boards.              |
| 3-2-2-2     | 95h        | Install CD-ROM for boot.                               |
| 3-2-2-3     | 96h        | Clear huge ES segment register.                        |
| 3-2-2-4     | 97h        | Fix up Multi Processor table.                          |
| 3-2-3-2     | 99h        | Check for SMART Drive (optional).                      |
| 3-2-3-3     | 9Ah        | Shadow option ROMs.                                    |
| 3-2-4-1     | 9Ch        | Set up Power Management.                               |
| 3-2-4-2     | 9Dh        | Initialize security engine (optional).                 |
| 3-2-4-3     | 9Eh        | Enable hardware interrupts.                            |
| 3-2-4-4     | 9Fh        | Determine number of ATA and SCSI drives.               |
| 3-3-1-1     | A0h        | Set time of day.                                       |
| 3-3-1-3     | A2h        | Check key lock.  |

| Beep Codes*        | Error Code | POST Description   |
|--------------------|------------|--|
| 3-3-2-1            | A4h        | Initialize typematic rate.   |
| 3-3-3-1            | A8h        | Erase F2 prompt.   |
| 3-3-3-3            | AAh        | Scan for F2 keystroke.   |
| 3-3-4-1            | ACh        | Enter SETUP.   |
| 3-3-4-3            | ACh        | Clear Boot flag.   |
| 3-4-1-1            | B0h        | Check for errors.  |
| 3-4-1-2            | B1h        | Inform RomPilot about the end of POST.   |
| 3-4-1-3            | B2h        | POST done - prepare to boot OS.  |
| 3-4-2-2            | B5h        | Terminate QuietBoot (optional).  |
| 3-4-2-3            | B6h        | Check password (optional).   |
| 3-4-2-4            | B7h        | Initialize ACPI BIOS.  |
| 3-4-3-2            | B9h        | Prepare Boot.  |
| 3-4-3-3            | BAh        | Initialize SMBIOS.   |
| 3-4-3-4            | BBh        | Initialize PnP Option ROMs.  |
| 3-4-4-1            | BCh        | Clear parity checkers.   |
| 3-4-4-2            | BDh        | Display MultiBoot menu.  |
| 3-4-4-3            | BEh        | Clear screen (optional).   |
| 3-4-4-4            | BFh        | Check virus and backup reminders.  |
| 4-1-1-1            | C0h        | Try to boot with INT 19.   |
| 4-1-1-2            | C1h        | Initialize POST Error Manager (PEM).   |
| 4-1-1-3            | C2h        | Initialize error logging.  |
| 4-1-1-4            | C3h        | Initialize error display function.   |
| 4-1-2-1            | C4h        | Initialize system error handler.   |
| 4-1-2-2            | C5h        | PnPnd dual CMOS (optional).  |
| 4-1-2-3            | C6h        | Initialize note dock (optional).   |
| 4-1-2-4            | C7h        | Initialize note dock late.   |
| 4-1-3-1            | C8h        | Force check (optional).  |
| 4-1-3-2            | C9h        | Extended checksum (optional).  |
| 4-1-3-3            | CAh        | Redirect Int 15h to enable remote keyboard.  |
| 4-1-3-4            | CBh        | Redirect Int 13h to Memory Technologies Devices such as ROM, RAM, PCMCIA, and serial disk. |
| 4-1-4-1            | CCh        | Redirect Int 10h to enable remote serial video.  |
| 4-1-4-2            | CDh        | Re-map I/O and memory for PCMCIA.  |
| 4-1-4-3            | CEh        | Initialize digitizer and display message.  |
| 4-2-1-3            | D2h        | Unknown interrupt.   |
| 4-3-1-1            | E0h        | Initialize the chipset.  |
| 4-3-1-2            | E1h        | Initialize the bridge.   |
| 4-3-1-3            | E2h        | Initialize the CPU.  |
| 4-3-1-4            | E3h        | Initialize system timer.   |
| 4-3-2-1            | E4h        | Initialize system I/O.   |
| 4-3-2-2            | E5h        | Check force recovery boot.   |
| 4-3-2-3            | E6h        | Checksum BIOS ROM.   |
| 4-3-2-4            | E7h        | Go to BIOS.  |
| 4-3-3-1            | E8h        | Set Huge Segment.  |
| 4-3-3-2            | E9h        | Initialize Multi Processor.  |
| 4-3-3-3            | EAh        | Initialize OEM special code.   |
| 4-3-3-4            | EBh        | Initialize PIC and DMA.  |
| 4-3-4-1            | ECh        | Initialize Memory type.  |
| 4-3-4-2            | EDh        | Initialize Memory size.  |
| 4-3-4-3            | EEh        | Shadow Boot Block.   |
| 4-3-4-4            | EFh        | System memory test.  |
| 4-4-1-1            | F0h        | Initialize interrupt vectors.  |
| 4-4-1-2            | F1h        | Initialize Run Time Clock.   |
| 4-4-1-3            | F2h        | Initialize video.  |
| 4-4-1-4            | F3h        | Initialize System Management Manager.  |
| 4-4-2-1            | F4h        | Output one beep.   |
| 4-4-2-2            | F5h        | Clear Huge Segment.  |
| 4-4-2-3            | F6h        | Boot to Mini DOS.  |
| 4-4-2-4            | F7h        | Boot to Full DOS.  |
| 1 long,<br>2 short | 98h        | Improper video configuration (replace motherboard) or external ROM checksum failure.       |

The following table lists POST messages and explanations for reported problems. If the system fails after you make changes in BIOS Setup, reset the computer, enter BIOS Setup, and install the defaults or correct the error.

**Table 3-4. POST Messages**

| Message  | Description  |
|--|--|
| <b>0200 Failure Fixed Disk</b>   | Fixed (hard) disk is not working or not configured properly. Make sure the hard disk is installed properly. Run BIOS Setup and make sure the hard disk type is correctly identified.   |
| <b>0210 Stuck key</b>  | Stuck key on keyboard.   |
| <b>0211 Keyboard error</b>   | Keyboard is not working.   |
| <b>0212 Keyboard Controller Failed</b>                                   | Keyboard controller failed the test. May require replacing the motherboard (contains the keyboard controller).   |
| <b>0213 Keyboard locked – Unlock key switch</b>                          | Unlock the system to proceed.  |
| <b>0220 Monitor type does not match CMOS – Run SETUP</b>                 | Monitor type is not correctly identified in BIOS Setup.  |
| <b>0230 Shadow RAM Failed at offset: <i>nnnn</i></b>                     | Shadow RAM failed at offset <i>nnnn</i> of the 64k block at which the error was detected.  |
| <b>0231 System RAM Failed at offset: <i>nnnn</i></b>                     | System RAM failed at offset <i>nnnn</i> of the 64k block at which the error was detected.  |
| <b>0232 Extended RAM Failed at offset: <i>nnnn</i></b>                   | Extended memory is not working or not configured properly at offset <i>nnnn</i> . Update to the latest BIOS version.   |
| <b>0250 System battery is dead – Replace and run SETUP</b>               | CMOS clock battery indicator shows that the CMOS battery is dead. Connect the AC adapter for at least 24 hours, then run BIOS Setup to reconfigure the system.   |
| <b>0251 System CMOS checksum bad – Default configuration used</b>        | System CMOS has been corrupted or modified incorrectly, perhaps by an application that changes CMOS data. In response, the BIOS has installed the default Setup values. Use BIOS Setup to modify these values if needed. If the error persists, check the CMOS battery. Connect the AC adapter for at least 24 hours; replace the motherboard. |
| <b>0260 System timer error</b>   | Timer test failed. Replace the motherboard.  |
| <b>0270 Real time clock error</b>  | Real-time clock failed the BIOS test. May require replacing the motherboard.   |
| <b>0271 Check date and time settings</b>                                 | BIOS found the date or time to be out of range, and reset the real-time clock. You may need to use BIOS Setup to reset the legal date.   |
| <b>0280 Previous boot incomplete – Default configuration used</b>        | Previous POST did not complete successfully. POST loads default values and offers to run BIOS Setup. If the failure was caused by incorrect values that are not corrected, the next boot will likely fail. This error is cleared the next time the system is booted.   |
| <b>0281 Memory Size found by POST differed from CMOS</b>                 | Memory size found by POST differed from that specified in CMOS.  |
| <b>02B0 Diskette drive A error</b><br><b>02B1 Diskette drive B error</b> | Drive A: or B: is present but fails the BIOS POST diskette tests. Make sure the drive is defined with the proper diskette type in BIOS Setup and that the drive is connected correctly.  |
| <b>02B2 Incorrect Drive A type – run SETUP</b>                           | Type of floppy drive A: not correctly identified in BIOS Setup.  |
| <b>02B3 Incorrect Drive B type – run SETUP</b>                           | Type of floppy drive B: not correctly identified in BIOS Setup.  |
| <b>02D0 System cache error – Cache disabled</b>                          | RAM cache failed and BIOS disabled the cache. May require replacing the motherboard. A disabled cache slows system performance considerably.   |

| Message   | Description   |
|---|---|
| <b>02F0: CPU ID:</b>  | CPU socket number for Multi-Processor error.  |
| <b>02F4: EISA CMOS not writeable</b>  | ServerBIOS2 test error: Cannot write to EISA CMOS.  |
| <b>02F5: DMA Test Failed</b>  | ServerBIOS2 test error: Cannot write to extended Direct Memory Access (DMA) registers.  |
| <b>02F6: Software NMI Failed</b>  | ServerBIOS2 test error: Cannot generate software Non-Maskable Interrupt (NMI).  |
| <b>02F7: Fail-Safe Timer NMI Failed</b>   | ServerBIOS2 test error: Fail-safe timer takes too long.   |
| <b>device Address Conflict</b>  | Address conflict for the specified device.  |
| <b>Allocation Error for: device</b>   | Run ISA or EISA Configuration Utility to resolve a resource conflict for the specified device.  |
| <b>CD ROM Drive</b>   | CD-ROM drive identified.  |
| <b>Entering SETUP ...</b>   | Starting BIOS Setup.  |
| <b>Failing Bits: nnnn</b>   | Hex number <i>nnnn</i> is a map of the bits at the RAM address that failed the memory test. Each 1 (one) in the map indicates a failed bit. See errors 230, 231, or 232 above for offset address of the failure in System, Extended, or Shadow memory.  |
| <b>Fixed Disk n</b>   | Fixed disk <i>n</i> (0–3) identified.   |
| <b>Invalid System Configuration Data</b>  | Problem with NVRAM (CMOS) data.   |
| <b>I/O device IRQ conflict</b>  | I/O device IRQ conflict error.  |
| <b>PS/2 Mouse Boot Summary Screen:</b>  | PS/2 mouse installed.   |
| <b>nnnn kB Extended RAM Passed</b>  | Where <i>nnnn</i> is the amount of RAM in kB successfully tested.   |
| <b>nnnn Cache SRAM Passed</b>   | Where <i>nnnn</i> is the amount of system cache in kB successfully tested.  |
| <b>nnnn kB Shadow RAM Passed</b>  | Where <i>nnnn</i> is the amount of shadow RAM in kB successfully tested.  |
| <b>nnnn kB System RAM Passed</b>  | Where <i>nnnn</i> is the amount of system RAM in kB successfully tested.  |
| <b>Operating system not found</b>   | Operating system cannot be located on drive A: or drive C:. Enter BIOS Setup and see if the hard disk and drive A: are properly identified.   |
| <b>Parity Check 1 nnnn</b>  | Parity error found in the system bus. BIOS attempts to locate the address and display it on the screen. If it cannot locate the address, it displays ????. Parity is a method for checking errors in binary data. A parity error indicates that data has been corrupted.  |
| <b>Parity Check 2 nnnn</b>  | Parity error found in the I/O bus. BIOS attempts to locate the address and display it on the screen. If it cannot locate the address, it displays ????.   |
| <b>Press &lt;F1&gt; to resume, &lt;F2&gt; to Setup, &lt;F3&gt; for previous</b> | Displayed after any recoverable error message. Press <F1> to start the boot process or <F2> to enter BIOS Setup and change the settings. Press <F3> to display the previous screen (usually an initialization error of an Option ROM, such as an add-on card). Write down and follow the information shown on the screen. |
| <b>Press &lt;F2&gt; to enter Setup</b>  | Optional message displayed during POST.   |
| <b>PS/2 Mouse:</b>  | PS/2 mouse identified.  |
| <b>System BIOS shadowed</b>   | System BIOS copied to shadow RAM.   |

| Message   | Description   |
|---|---|
| <b>UMB upper limit segment address: <i>nnnn</i></b> | Displays the address <i>nnnn</i> of the upper limit of Upper Memory Blocks (UMB), indicating released segments of the BIOS that can be reclaimed by a virtual memory manager. |
| <b>Video BIOS shadowed</b>                          | Video BIOS copied to shadow RAM.  |

## Sycard PCCtest 450/460 PC Card (Optional)

The PCCtest 450 and 460 cards (version 1.05) from Sycard Technology are the only recommended diagnostic tools that test the functionality of the PCMCIA slots using a PCMCIA card. Each is a Type II PC card that works with test software to exercise PCMCIA functions. (For details, see the Sycard Technology web site: <http://www.sycard.com>.)

The PCCtest product contains these components:

- PCCtest 450 or 460 (revision 1.05) PC card.
- PCCtest 450/460 software disk. (Software updates are available at the Sycard Technology web site.)
- Configuration headers (PC card/16-bit and CardBus/32-bit) that attach to the card.

You will also need a CardBus extender card (such as the Sycard PCCextend 70) to avoid wear on the Sycard PCMCIA connector.

Use the following tests to check the function of the notebook's PCMCIA slots. See the Sycard documentation for details about running the tests.

**Table 3-5. Sycard PCCtest Commands**

|   | <b>PCMCIA PC card (16-bit) test</b><br>(PC card configuration header) | <b>CardBus (32-bit) test</b><br>(CardBus configuration header) |
|---|---|--|
| <b>Omnibook XT/VT6200 and XT6050</b><br>(PC11410) | PCT450 -0 -v -b75   | TESTCB -0 -v -b76(b)   |

## Windows Management Instrumentation (WMI)

The Windows Management Instrumentation (WMI) is basically a set of rules for accessing information about a computer. WMI allows an application to determine, for example, the operating system being used, which hardware and software components are in the computer, and possibly whether any of the components need replacing. A local or remote application can use the WMI interface to check which hardware and software components are installed on your computer, and may be able to tell how well they are working or if they need replacement.

### Installing the WMI Package

The WMI package is either preinstalled on the computer's hard disk or can be downloaded from <http://www.hp.com/toptools> (the contents are the same in both cases). The package must be properly installed before it can be used.

To install the WMI preloaded on the hard disk:

1. Start Windows, if it is not already running.
2. Click Start, Programs (or All Programs), HP Toptools, Setup.

### Using WMI

For a complete description of how to use WMI, see the following documentation provided with the computer:

- A README.TXT file: click Start, Programs, HP Toptools, Read me.
- A Windows online help file describing Hewlett-Packard's implementation of WMI (group and attribute definitions): click Start, Programs, HP Toptools, HP Toptools Help.

### Uninstalling the WMI Package

1. Click Start, Programs (or All Programs), HP Toptools, Uninstall WMI.
2. Restart the notebook.

## BIOS Setup Utility

The BIOS Setup utility provides access to the notebook's basic configuration settings. It is independent of the operating system.

### Running the BIOS Setup Utility

1. Close all applications, then restart the notebook: click Start, Shut Down (Windows 2000) or Turn Off Computer (Windows XP), Restart. (If necessary, you can press Ctrl+Alt+Del to restart.)
2. When the HP logo appears, press F2 to enter the BIOS Setup utility.
3. The pointing devices are not active in BIOS Setup, so you will need to use the keyboard to navigate:
  - Press the LEFT and RIGHT arrow keys to move among menus.
  - Press the UP and DOWN arrow keys to move among parameters in a menu.
  - Press F5 or F6 to move through values for the current parameter, or press Enter to change a setting.
4. After you select the options you want, press F10 or use the Exit menu to exit BIOS Setup.

If the settings cause a conflict between devices during reboot, the system prompts you to run BIOS Setup, and marks the conflicting settings.

#### Note

The listings in the following table are for the initial XT/VT6200 BIOS release, and may differ somewhat for other models.

**Table 3-6. BIOS Setup Menus and Parameters**

| <b>Omnibook XT6050:</b> Introduced with BIOS version EF.M1.00 (Spring 2002).<br><b>Omnibook XT/VT6200:</b> Introduced with BIOS version EG.M1.00 (Spring 2002). |   |                         |
|---|---|-------------------------|
| Main Menu   | Description   | Default                 |
| BIOS Revision   | Shows the current HP BIOS version.  | Detected automatically. |
| System Time   | Sets the date using dd/mm/yy format (except English, which uses mm/dd/yy format). The value set in this field takes effect immediately.       |                         |
| System Date   | Sets the date using mm/dd/yy (English) or dd/mm/yy format. The value set in this field takes effect immediately.                              |                         |
| Internal Hard Disk  | Sets the hard disk drive type, capacity, and other parameters.  | Detected automatically. |
| Video Configuration   |   |                         |
| Quiet Boot  | When enabled, hides summary of power-on self test and messages during boot.   | Enabled                 |
| Video Display Device  | Sets whether the built-in display automatically switches to an external display, if one is detected.  | Auto                    |
| Video Expansion   | When enabled, the video image covers the entire display in lower-resolution modes. When disabled, the video image is centered in the display. | Disabled                |

|                            |  |                         |
|----------------------------|--|-------------------------|
| Primary Video Adapter      | Sets whether the computer automatically switches to an external video adapter connected to the docking system, if one is detected.     | Auto                    |
| Television Type            | Controls the signal format (NTSC or PAL) output by the S-video port.   | NTSC                    |
| System Memory              | Shows the system memory size.  | 640 KB                  |
| Extended Memory            | Shows the extended memory size (equals total memory size minus 1 MB).  | Detected automatically. |
| Unique Dock ID             | Sets whether the computer creates a unique hardware profile for each dock (Enabled) or uses a common profile for all docks (Disabled). | Enabled                 |
| UUID                       | Displays the value of the 16-byte UUID (Universally Unique ID) as 32 hex characters.   | Detected automatically. |
| MAC Address                | Displays the internal LAN MAC address.   | Detected automatically. |
| Serial Number              | Displays the serial number as it appears on the back of the notebook.  | Detected automatically. |
| Service ID                 | Displays the "Born On Date" stored in EEPROM in format YYYYDDD.  | Detected automatically. |
| <b>System Devices Menu</b> | <b>Description</b>   | <b>Default</b>          |
| PS/2 Pointing Devices      | Disables the internal pointing devices when an external PS/2 mouse is connected.   | Auto                    |
| FDD Controller             | Enables the floppy drive.  | Enabled                 |
| Legacy USB Support         | Enables BIOS support for USB mouse, keyboard, and floppy disk drive.   | Enabled                 |
| Internal LAN               | Enables the internal (wired) LAN.  | Enabled                 |
| Mini PCI Slot 1            | Enables the PCI slot normally used for a wireless LAN.   | Enabled                 |
| Mini PCI Slot 2            | Enables the PCI slot normally used for a modem, which is located under the cover on the bottom of unit. (Does not affect Ambit modem.) | Enabled                 |
| Serial port                | Enables the serial port.   | Enabled                 |
| Base I/O address           | Sets the I/O address.  | 3F8h                    |
| Interrupt                  | Sets the interrupt.  | IRQ4                    |
| Infrared port              | Enables the infrared port.   | Disabled                |
| Mode                       | Sets the hardware to support FIR (Fast IR) or SIR (Standard IR) infrared communications.   | FIR                     |
| Base I/O address           | Sets the I/O address.  | 2F8h                    |
| Interrupt                  | Sets the interrupt.  | IRQ3                    |
| DMA channel                | Sets the DMA channel for Fast IR (FIR) mode.   | DMA0                    |
| Parallel Port              | Enables the parallel port.   | Enabled                 |
| Mode                       | Sets the port to output only, bi-directional, EPP, or ECP.   | ECP                     |
| Base I/O address           | Sets the I/O address.  | 378h                    |
| Interrupt                  | Sets the interrupt.  | IRQ7                    |
| DMA channel                | Sets the DMA channel for ECP mode.   | DMA3                    |

| <b>Security Menu</b>  | <b>Description</b>   | <b>Default</b>  |
|---|--|---|
| User Password is  | Shows if a user password is set.   | Clear   |
| Administrator Password is   | Shows if an administrator password is set.   | Clear   |
| Set User Password   | Press Enter to set, change, or clear the user password. The password can have no more than 8 characters (0-9, A-Z), and cannot include special or accented characters.   | Enter   |
| Set Administrator Password  | Press Enter to set, change, or clear the administrator password, which protects BIOS Setup settings. The password can have no more than 8 characters (0-9, A-Z), and cannot include special or accented characters.  | Enter   |
| Smart Card Security   | Enables Smart Card user validation instead of the password scheme. This field appears only if Smart Card Security has been enabled by HP Smart Card software in Windows.   | Enabled   |
| Password Required to  |  |   |
| Boot  | Sets whether a user password is required when the computer boots. Requires the administrator password for changes.   | Enabled   |
| Internal hard disk drive lock                                       | Encodes the current user password (or administrator password if that is the only password set) on the hard disk drive.   | Disabled  |
| Removable Device Boot   | Sets whether the computer will attempt to boot from a floppy drive or other removable device.  | Enabled   |
| <b>Power Menu</b>   | <b>Description</b>   | <b>Default</b>  |
| Backlight Control   | When switching to battery power, sets whether the display brightness reverts to the previous battery-power brightness (Auto Restore) or to a very low brightness to save power (Auto Dim).   | Auto Restore  |
| Auto Suspend on Undock*   | Sets whether the computer suspends to Standby power mode after undocking.  | When Lid Closed   |
| Auto Turn-On on Dock*   | Sets whether the computer turns on after docking.  | Enabled   |
| <b>Boot Menu</b>  | <b>Description</b>   | <b>Default</b>  |
| +Hard Disk<br>+Removable Device<br>CD-ROM/DVD Drive<br>Internal NIC | Shows the order of boot devices, with "+" indicating a device category. Move the entries to change the order. If the computer has more than one device in a category, you can select the one scanned. Internal NIC provides diskless boot from a network server. | 1. Hard Disk<br>2. Removable Device<br>3. CD-ROM/<br>DVD drive<br>4. Internal NIC |
| <b>Exit Menu</b>  | <b>Description</b>   |   |
| Save Changes and Exit   | Saves Setup changes, then exits and reboots.   |   |
| Discard Changes and Exit  | Discards any Setup changes made since last save, then exits and reboots. Does not affect password, date, or time changes.  |   |
| Get Default Values  | Restores default settings, and remains in Setup. Does not affect password, date, or time changes.  |   |
| Load Previous Values  | Discards any Setup changes made since last save, and remains in Setup. Does not affect password, date, or time changes.  |   |
| Save Changes  | Saves Setup changes, and remains in Setup. Security settings are saved when changed.   |   |

## Updating the Notebook's BIOS

Hewlett-Packard may from time to time provide updates to the notebook's BIOS. Use e-DiagTools for Windows to download and install these BIOS updates as needed—see “Using e-DiagTools for Windows” on page 2-29.

### Caution

The BIOS update completely replaces the previous BIOS, so follow these directions exactly or you might damage the notebook. The BIOS update also resets the configurations in the BIOS Setup utility—except for BIOS passwords—so record these before performing the update.

Update the notebook's BIOS as follows:

1. In Windows, exit any programs that are running.
2. Undock the notebook if it is docked, and remove any PC cards from it.
3. Connect the AC adapter to the notebook.
4. Connect any cables or equipment needed to connect to the Internet.
5. Click Start, Programs (or All Programs), HP e-DiagTools, e-DiagTools for Windows.
6. Click Update, select Download New and click OK. Follow the instructions that appear. **Once the update process begins, do not interrupt it.**

The first time you make an Internet connection from this program on a particular unit, click Change Settings in the Connect window to define your connection settings.

7. When the process is completed, press the system-off switch to reset the system.

BIOS updates are also available from the HP Business Support web site ([www.hp.com/go/bizsupport](http://www.hp.com/go/bizsupport)). Installation utilities and instructions for creating a BIOS floppy disk are provided with the updates.

## Replaceable Parts

---

This chapter contains an exploded view of the Omnibook and the following lists of parts:

- Omnibook replaceable parts (page 4-3).
- Accessory replacement parts (page 4-6).
- Part number reference (page 4-7).

Figure 4-1. Exploded View

**Table 4-1. Omnibook Replaceable Parts**

|    | Description   | Part Number     | Exchange Part Number | Omnibook      |        | User Repl. |
|----|---|-----------------|----------------------|---------------|--------|------------|
|    |   |                 |                      | XT6200 VT6200 | XT6050 |            |
|    | Antennas, OB6100, kit                                 | F3257-60952     |                      | •             | •      |            |
| 1  | Front antenna PCA                                     | (see above kit) |                      | •             | •      |            |
| 2  | Rear antenna PCA                                      | (see above kit) |                      | •             | •      |            |
| 3  | Battery, main   | F2019-60902     |                      | •             | •      | Yes        |
|    | Card, mini-PCI (hardware modem)                       | F4624-60906     |                      |               | •      | Yes        |
|    | Card, mini-PCI (software modem)                       | F4506-60932     |                      | •             | •      | Yes        |
|    | Card, mini-PCI, 802.11b (worldwide)                   | F3257-60962     |                      | •             | •      | Yes        |
|    | Card, mini-PCI, 802.11b (France only)                 | F3257-60963     |                      | •             | •      | Yes        |
|    | Card, mini-PCI, 802.11b (Israel only)                 | F3257-60964     |                      | •             | •      | Yes        |
| 4  | Case, bottom  | F4506-60935     |                      |               | •      |            |
| 4  | Case, bottom  | F4525-60908     |                      | •             |        |            |
| 5  | Case, top   | F4506-60933     |                      |               | •      |            |
| 5  | Case, top   | F4525-60906     |                      | •             |        |            |
| 6  | Covers, corner, OB6100, kit                           | F3257-60951     |                      | •             | •      | Yes        |
|    | Covers, service, kit                                  | F4506-60901     |                      | •             | •      |            |
| 7  | Panel, sound/IR                                       | (see above kit) |                      | •             | •      |            |
| 8  | Cover, rear antenna                                   | (see above kit) |                      | •             | •      |            |
| 9  | Doors, PCMCIA (with springs)                          | (see above kit) |                      | •             | •      |            |
| 10 | Doors, docking (with springs)                         | (see above kit) |                      |               | •      |            |
| 11 | Cover, center display hinge                           | (see above kit) |                      | •             | •      |            |
| 12 | Cover, mini-PCI (no label)                            | F3257-60942     |                      | •             | •      | Yes        |
| 13 | Cover, SDRAM (for Actiontech card)                    | F3257-60943     |                      |               | •      | Yes        |
| 13 | Cover, SDRAM (no label)                               | F3257-60944     |                      | •             | •      | Yes        |
| 14 | Cover, Trackpoint (bag of 3, Raspberry Red)           | 5182-5138       |                      | •             | •      | Yes        |
| 15 | CPU module, Celeron-T, 1.06 GHz, Tualatin uFCPGA      | 1822-0691       | F3377-69201          |               | •      |            |
| 15 | CPU module, Celeron-T, 1.13 GHz, Tualatin uFCPGA      | 1822-0692       | F3377-69202          |               | •      |            |
| 15 | CPU module, Pentium III, 933 MHz, Tualatin uPGA2      | 1822-0400       | F3257-69004          |               | •      |            |
| 15 | CPU module, Pentium III, 1.00 GHz, Tualatin uFCPGA    | 1822-0395       | F3257-69005          |               | •      |            |
| 15 | CPU module, Pentium III, 1.13 GHz, Tualatin uFCPGA    | 1822-0392       | F3257-69006          |               | •      |            |
| 15 | CPU module, Pentium 4, 1.4 GHz, Northwood uFCPGA      | 1822-0778       | F3398-69204          | •             |        |            |
| 15 | CPU module, Pentium 4, 1.5 GHz, Northwood uFCPGA      | 1822-0779       | F3398-69203          | •             |        |            |
| 15 | CPU module, Pentium 4, 1.6 GHz, Northwood uFCPGA      | 1822-0780       | F3398-69202          | •             |        |            |
| 15 | CPU module, Pentium 4, 1.7 GHz, Northwood uFCPGA      | 1822-0781       | F3398-69201          | •             |        |            |
| 15 | CPU module, Pentium 4, 1.8 GHz, Northwood uFCPGA      | 1822-0819       | F3398-69205          | •             |        |            |
| 16 | Display assembly, 14-in XGA, plastic                  | F4506-60934     | F4506-69034          |               | •      |            |
| 16 | Display assembly, 14-in XGA, plastic                  | F4525-60911     | F4525-69011          | •             |        |            |
| 16 | Display assembly, 14-in SXGA+, magnesium              | F4525-60902     | F4525-69002          | •             |        |            |
| 16 | Display assembly, 14-in XGA, magnesium                | F4525-60901     | F4525-69001          | •             |        |            |
| 16 | Display assembly, 15-in SXGA+                         | F4525-60903     | F4525-69003          | •             |        |            |
| 16 | Display assembly, 15-in UXGA                          | F4525-60904     | F4525-69004          | •             |        |            |
| 17 | Drive, hard disk (10 GB, 9.5mm, IBM [diablo], ATA100) | 0950-4166       | F3257-69100          |               | •      | Yes        |
| 17 | Drive, hard disk (10 GB, 9.5mm, Toshiba, ATA100)      | 0950-4178       | F3257-69101          |               | •      | Yes        |
| 17 | Drive, hard disk (20 GB, 9.5mm, Toshiba, ATA100, FDB) | 0950-4287       | F3476-69002          | •             | •      | Yes        |
| 17 | Drive, hard disk (30 GB, 9.5mm, IBM [diablo], ATA100) | 0950-4162       | F2072-69115          | •             | •      | Yes        |

## Reference Information

---

This chapter includes the following reference information:

- Password removal policy.
- Display quality statement.

---

### Password Removal Policy

If the user forgets the system password, the user calls Technical Support to determine the proper removal procedure. The user must provide proof of ownership, and the Omnibook must be operated during the procedure.

The password removal procedure is protected as HP Company Private information. There are a restricted number of locations that can perform password removal. It may not be disclosed or distributed outside those locations.

Password removal is strictly controlled. Hewlett-Packard and authorized support providers must ensure with written evidence that the Omnibook being “cleansed” is actually in the possession of the unit’s actual and current owner. This requires a sales receipt showing the unit serial number and owner’s name, or a written statement from the owner attesting that he or she is the owner of the unit. The statement can be a fax copy of the document. The fact that the unit is in the hands of an HP representative on behalf of the customer is not evidence of ownership. In addition, HP will not remove the password of a unit for any non-owner, even if it is requested by law enforcement agencies. If you receive such a request, you should notify management and HP Corporate Legal immediately. (These requests may require a court order prior to our participation.)

Further, the entity removing the password must log the name, serial number and date of the removal, and file the written backup with the log. The log and backup are subject to standard record retention process and review.

The final issue relating to removal of passwords is that HP cannot provide information to users that would assist them in improperly removing a password and opening a unit.

---

# Hewlett-Packard Display Quality Statement

TFT display manufacturing is a highly precise but imperfect technology, and manufacturers cannot produce large displays that are cosmetically perfect. Most, if not all, TFT displays exhibit some level of cosmetic imperfection. These cosmetic imperfections may be visible to the customer under varying display conditions, and can appear as bright, dim, or dark spots. *This issue is common across all vendors supplying TFT displays in their products and is not specific to the HP Omnibook display.*

HP Omnibook TFT displays meet or exceed all HP standards for cosmetic quality of TFT displays. HP does not warrant that the displays will be free of cosmetic imperfections. *TFT displays can have a small number of cosmetic imperfections and still conform to HP's cosmetic quality specifications.*

Here are some guidelines for determining what action to take on customers' complaints of cosmetic imperfections in their TFT displays:

1. View the unit under the customer's normal operating conditions.

This means that if the customer uses the unit predominately in DOS, in Windows, or in some other application or combination of applications, you should make the determination under those same applications. Self test is not a normal operating condition and is not a sufficient tool for interpreting display quality.

2. Use the table below to determine whether the display should be considered for replacement. These are the only conditions in this guideline that may call for a replacement due to a defect in material or workmanship based on the HP Limited Warranty Statement.
3. If a display is considered for replacement, make sure the customer understands that cosmetic variations may also exist on the replacement display, and may require the customer to use a work-around to obscure the cosmetic imperfection.
4. Customers with cosmetic-based complaints that do not conform to the above conditions and tests will not normally be considered for display replacement. The HP-responsible person working with the customer should identify work-arounds that are reasonable and appropriate for the individual customer. Customers who must have a more perfect display solution should consider switching to an Omnibook with a DSTN display.

We expect that over time the industry will continue to produce displays with fewer inherent cosmetic imperfections, and we will adjust our HP guidelines as these improvements are implemented.

**Table 5-1. Omnibook XT6050 and XT/VT6200 LCD Guidelines**

| Type of Imperfection  | Imperfections Not Allowed   |
|---|---|
| <b>Electrical Imperfections:</b><br>Bright dots (a)<br>Dark dots (a)  | <ul style="list-style-type: none"> <li>• 7 or more single bright dots.</li> <li>• 7 or more single dark dots.</li> <li>• 9 or more total (bright and dark combined) defective dots.</li> <li>• Any occurrence of multiple defective dots within 15 mm.</li> </ul> |
| <b>Mechanical Imperfections:</b><br>Discoloration<br>Polarizer bubbles, dents (b)   | <ul style="list-style-type: none"> <li>• Any polarizer bubble, discoloration, or dent that is visible from at least 36 cm (14 in).</li> </ul>   |
| Definitions of imperfections:<br>a Bright or dark dot: a subpixel (red, green, or blue dot) that is stuck on or off.<br>b Polarizer dent or bubble: a light spot with a darker border that appears on a lighted display and does not change size. (In contrast, a polarizer scratch is a light line that is visible on a darker background and does not change size.) |   |

---

## Service Notes

Service notes containing important repair information for Technology Codes EF, EG will be issued as needed. These notes are available online at the Partnership web site—see page vi.
